Dr. Morrison, correspondent of the *Times* at Pekin, after visiting Dalny and Port Arthur by permission of the Japanese headquarters, records his opinion that the surrender of Port Arthur by gen. Stossel was not justified by the condition of the fortress, and strongly condemns the Russian capitulation in view of the fact that 25,000 able-bodied soldiers, well clad and well nourished, and capable of making a sortie, were found by the Japanese in the fortress; that there was ample food for three months; that there was fuel in abundance, 70,000 tons of coal being stored in the dockyard, besides large quantities

* Official statement of the captures at Port Arthur: prisoners, 41,641 combatants (15,307 sick or wounded); 528 guns (serviceable); 206,734 rounds of gun ammunition; 36,598 small arms, 5,436,240 rounds of small arm ammunition; 1,475,000 lbs. of flour; 123,000 lbs. of barley; 23,333 lbs. of Indian corn; 2,250 lbs. of rye; 1,000,000 lbs. of bread; 58,000 lbs. of canned beef; 590,000 lbs. of salt; 33,300 lbs. of sugar.

of firewood; that there was no serious failure of ammunition; that the number of buildings destroyed or injured in Port Arthur was comparatively small, the Japanese having directed their fire on the docks, workshops, and the ships in the harbour Of the 14,000 cases in the hospital from all classes of the population, only a small proportion were wounded In Dr. Morrison's opinion, "no more discreditable surrender has been recorded in history." He states that the heart and soul of the defence was gen. Koudrachenko, who was killed 18 Dec. 1904, and that but for him gen Stossel would have capitulated some weeks earlier . 25 Jan 1905

Japanese third army, under gen Nogi, set free from Port Arthur, occupies position at Sha-hei-po, a small town W of Liao-yang . . . 20 Feb. ,,

BATTLE OF MUKDEN.—The Japanese forces comprised the third army, under gen Nogi, on the left (looking northward); the second army, under gen Oku, to the right of the third army; the fourth army, under gen. Nodzu, in the centre, the first army, under gen. Kuroki, on the right, and the right flank detachment of reservists under gen Kawamura The Japanese line extended nearly 100 miles from W to E, under the direction of marshal Oyama. The Russian forces comprised the second army under gen Kaulbars (looking southward); the centre under gen. Bilderling, and the first army under gen Linevitch, with a detachment under gen Rennenkampf, the whole commanded in chief by gen. Kuropatkin

The general idea of the Japanese operations was the threatening of the Russian left under gen. Linevitch, the real object the attack on the Russian right and an extended out-flanking movement Gen. Kuropatkin (whose forces were about 400,000 men and 1,500 guns, with a strongly entrenched position on the S. and S E. of Fushan, 26 miles east of Mukden), misled by the Japanese attack on his left, where his strongest forces were placed, failed to realise the true Japanese objective, until too late to readjust his forces (For convenience of reference this battle, one of the greatest of modern times, is divided into 5 sections, representing the successive stages of the conflict.)

I. The Japanese commence offensive operations on the Russian left by the advance of gen Kawamura over the frozen roads and rivers, 19 Feb; he gains the Ching-ho-cheng defile, the Tai-tse river having been crossed, and a fierce conflict waged for two days with the Russians, who are driven out of their entrenchments, 24 Feb; Japanese first army, under gen. Kuroki, moves forward from the Pen-hsi-hu district upon Kao-tu-ling, and forces the Russians from their advanced positions about 10 miles N. and N.W. of Pen-hsi-hu; the fourth army, under gen. Nodzu, advances on the Sha-ho, gaining ground and threatening the Russian position, with the result that g-n. Kuropatkin's attention was directed to the defence of his centre and left . 19–28 Feb. 1905

II. Gen. Oku, with the Japanese second army, advances and deploys between the Sha-ho and the Hun; gen. Nogi, with the third army on the left of gen. Oku, rapidly marches between the Hun and the Liao in a northerly direction, overcoming all the counter-attacks of the Russians, 28. Feb. gen. Kuropatkin becomes aware of this movement, 1 March, but measures taken by him proved to be inadequate and too late, his forces being driven back on the night towards Mukden; gen. Nogi begins his turning movement on the west, between the Hun and Liao rivers, marching rapidly in a northerly direction, 26 Feb.; advances at first without encountering opposition, marches nearly due N. to Hsin-min-tun, 33 miles west of Mukden, 1 March; swinging round, gen. Nogi marches eastward on a front of 15 miles, keeping touch with gen. Oku, at Li-kwan-pan, and pushing towards the railway; second Russian army, under gen Kaulbars, is forced to face westward on a line running from Machiapu to N.N E.; the fourth and first Japanese armies, under generals Nodzu and Kuroki respectively, make sustained efforts to prevent the Russian troops from withdrawing in the centre and the left to meet the decisive attack . . . 28 Feb.–4 March, 1905

III. Russian army by 5 March was held fast in the centre, driven back on the left and completely turned on the right, gen. Kuroki having forced the left of the Russian entrenchments on the Sha-ho, 5 March, Russian reserves attack gen. Oku and penetrate a short distance along the Hsin-min-tun-road, but are then repulsed, 5 March; gen. Nodzu dislodges the Russians from their earthworks S. of the Sha-ho, 2–6 March; gen. Nogi's line extends its envelopment of the Russian forces to the N. of Mukden; the fortified positions of Machuntun and Tita, S and S.E. of Fushan, reached by gen. Kawamura, 28 Feb., are the scene of a desperate conflict, gen Kuropatkin bringing up his reserves to these positions; after 8 days of fierce fighting the Japanese take Machuntun, 8 March gen. Kuropatkin decides to withdraw his centre and left behind the Hun and attack generals Oku and Nogi with all available forces from the armies of generals Kaulbars and Bilderling, 8 March, railway N of Mukden cut by the Japanese under gen Nogi . . . . . 5–8 March, ,,

IV. Russian first army under gen. Linevitch effects its retreat to the line of the Hun without serious loss, and takes up a defensive position there, situation of the Russian army at Mukden becomes most critical, owing to the exhaustion of the second Russian army under gen. Kaulbars, and the arrival at Mukden of the third army under gen. Bilderling, which causes a great accumulation of troops in a confined space and their exposure to the concentrated fire of the Japanese, who draw in upon the town from all sides except the N.E.; a gallant attempt is made by gen. Kuropatkin, who leads an attack of 65 battalions, checking the advance of generals Oku and Nogi, 9 March; gen. Nodzu, having crossed the Sha-ho, sweeps on to the Hun, and penetrates the Russian line; Kusan, E of Mukden, occupied by the Japanese on the north, while gen Nogi fights to establish himself across the line of the Russian retreat, 9 March, gen Kuropatkin, to avoid the destruction or capture of the second and third Russian armies, gives the order for a general retreat, 9 March; Tita taken by the Japanese, 9 March, and the Russians in this part of the field fly to the N. of Fushan, 8–9 March. ,,

V. General Nodzu crosses the Hun, 10 March; Japanese occupy Mukden, 10 March; a large number of the Russian troops, owing to the enveloping character of the Japanese attacks, are unable to escape, gen. Nogi occupies the line of the Puho directly across the main line of retreat and astride all the roads leading from Mukden to the N; the remnant of the Russian army escapes over the hills in disorder, gen. Linevitch alone retaining his formations, and showing a bold front against gen. Kuroki, 10 March; Fushan position carried by the Japanese, and the Russians retire towards Tie-ling, 10 March, parties of Russians in the adjacent villages and positions around Mukden continue to offer resistance, but are driven from all the country 26 miles N. of Mukden, and the Russians, broken and routed, flee in great disorder to Tie-ling, 12 March . . 10–12 March, ,,

(Russian loss, 30,000 killed, 100,000 wounded, 50,000 prisoners; Japanese casualties, 52,500 killed and wounded. Immense captures of prisoners, arms, ammunition, provisions, etc.)

BATTLE OF TSU SHIMA.—This, the greatest naval battle since Trafalgar (21 Oct. 1805), was fought when the Russian Baltic fleet, under adm. Rozhdestvensky, entering the Straits of Tsu Shima, between Corea and Japan, was attacked by the Japanese fleet under adm. Togo, and practically annihilated. A fog at first prevailed, when adm. Rozhdestvensky's main fleet, steaming in two columns, the battleships to starboard and cruisers to port, drew up to Tsu Shima in the forenoon of 27 May. The fog cleared in the afternoon, when the Russian fleet was sighted by the Japanese scouts. Immediately on receiving the report that the Russian fleet was in sight the combined squadrons of the Japanese started for attack, and met the Russian squadron near Okino Shima, to the S.E. of Tsu Shima. The battle began between 2 and 3 p.m., a strong breeze blowing and a high sea running. Before the engagement commenced adm. Togo signalled from the flagship *Mikasa* to the Japanese fleet: "The fate of the Empire depends on this effort. Let every man do his utmost." Although inferior in the number of their battleships the skilful tactics and superior range of their guns gave the Japanese the superiority, and enabled them to inflict a crushing defeat on the Russians. The battle lasted until the afternoon of 28 May, and included a general engagement, and a torpedo attack on the night of 27 May, breaking up the defeated Russian fleet. The *Kniaz Souvaroff*, the flagship of adm. Rozhdestvensky, was blown up; the admiral himself, seriously wounded, was rescued by a Russian torpedo-boat destroyer (afterwards captured), and taken prisoner; adm. Folkersahm was killed in the conning tower of the *Oslyabya*; and rear-adm. Nebogatoff was taken prisoner; 21 of the ships of the Russian fleet were sunk, viz., the battleships *Kniaz Souvaroff*, *Borodino*, *Oslyabya*, *Alexander III.*, *Navarin*, and *Sissoi Veliky*; the cruisers *Dimitri Donskoi*, *Admiral Nakhimoff*, *Svietlana*, *Vladimir Monomakh*; a coast defence ship the *Admiral Oushakoff*; the special service ships *Russi Ural*, *Anadyr*, *Kamtchatka*, and the *Iltutish*; and 3 torpedo-boat destroyers. 5 Russian ships were captured—the battleships *Nikolai I.* and the *Orel*; the coast defence ships *Admiral Apraxine* and *Admiral Seniavin*; and 1 torpedo-boat destroyer. 9 Russian ships escaped; 5 cruisers, of which number the *Aurora*, *Jemchug*, and *Oleg* (with adm. Enquist on board wounded) escaped to Manilla, and were interned; the *Almaz* succeeded in reaching Vladivostok; the *Izumrud* was wrecked in Vladimir bay; 2 special service ships escaped to Shanghai, 1 torpedo-boat destroyer to Shanghai, and another to Vladivostok. The Russian loss is estimated at 4,000 killed or drowned; 7,282 officers and men taken prisoners. The Japanese in the engagement lost 3 torpedo boats, 116 officers and men were killed and 538 wounded; the Japanese flagship *Mikasa* sustained the heaviest losses, 27-28 May, 1905.

RUSSO-TURKISH WAR.*

The Russian and French governments having each taken a side in the dispute between the Greek and Latin churches as to the exclusive possession of the *Holy Places* (*which see*) in Palestine, the Porte advised the formation of a mixed commission, which decided in favour of the Greeks, and a firman was promulgated accordingly, 9 March, 1853: to this decision the French acceded, although dissatisfied.

The Russians make further claims, and prince Menschikoff (who arrived at Constantinople 28 Feb. 1853), by various notes (between 22 March and 18 May), demands that a convention should be signed by the sultan granting to the czar such a protectorate over the Greek Christians in Turkey, as the sultan considered inimical to his own authority . . 22 March-18 May, 1853

H Seymour, in one of which (Jan. 14) he compared Turkey to a "sick man" in a state of decrepitude, on the point of death, and made proposals to the British government as to the disposal of his property. He stated frankly that he would not permit the British to establish themselves at Constantinople; but said in another conversation, he would not object to their possessing Egypt. The purport of these conversations was conveyed in despatches to lord John Russell, who replied that the British government declined to make any provision for the contingency of the fall of Turkey. The czar made similar proposals to the French government with the same result.

RUTHENIUM, a rare metal, discovered in an ore of platinum by M. Claus, in 1845.

RUTHERFURD'S ACT, LORD (13 & 14 Vict. c. 36), for simplifying law proceedings in Scotland, passed 1850.

RUTHVEN, RAID OF, a term applied to the seizure of the person of James VI. of Scotland by William Ruthven, earl of Gowrie, and other nobles, in 1582, to compel the king to dismiss his favourites, Arran and Lennox. Ostensibly for this, Gowrie was judicially put to death by his two opponents in 1584.

RYE-HOUSE PLOT, a plot (some think pretended) to secure the succession of the duke of Monmouth to the throne in preference to the duke of York (afterwards James II.), a Roman catholic. Some of the conspirators are said to have projected the assassination of the king, Charles II., and his brother. This design is said to have been frustrated by the king's house at Newmarket accidentally taking fire, which hastened the royal party away eight days before the plot was to take effect, 22 March, 1683; see *Newmarket*. The plot was discovered 12 June following. Lord William Russell on 21 July, and Algernon Sidney on 7 Dec. following, suffered death for being concerned in this conspiracy. Both were illegally convicted. The name was derived from the conspirators' place of meeting, the Rye-house at Broxbourne, Hertfordshire.

S.

SAALFIELD (Saxony, N. Germany). Here the Prussians, under prince Louis of Prussia, were defeated and their leader slain by the French under Lannes, 10 Oct. 1806.

SAARBRÜCK, the Roman *Augusti Muri* or *Saræ pons*, an open town on the left bank of the Saar, in Rhenish Prussia, founded in the tenth century, long subject to the bishops of Metz, afterwards ruled by counts (about 1237), and by the house of Nassau about 1380. It was captured by the French and retaken by the Germans 1676, reunited to France 1794-1814, and ceded to Prussia, 1815. On 2 Aug. 1870, it was bombarded by the French under Frossard (between 11 and 1 in the daytime), and the Prussians in small force were dislodged, and the town occupied by the French general Bataille. The mitrailleuses were said to be very effective. On the 6 Aug. the Prussian generals Gœben and Von Steinmetz, with the first army, recaptured Saarbrück, after a sanguinary conflict at the village of Spicheren. The loss was great on both sides. The French general François was killed, and the 2nd corps under Frossard nearly destroyed. The French retreated to Metz.

SABÆANS, the ancient inhabitants of Yemen, in S. Arabia; in the Old Testament called Sheba, *Gen.* x. 28, *Job* vi. 19, &c. The queen of Sheba is mentioned as having visited Solomon. The Sabæans were a wealthy and powerful people, carrying on an extensive trade of commodities as gold, ivory, spices, &c., obtained from India and Africa. In the 8th cent. B.C. "the people of Saba" paid tribute to Tiglath-Pileser and Sargon, kings of Assyria. A Roman expedition, under Ælius Gallus, unsuccessfully invaded the country of the Sabæans, 24 B.C. Their religion included the worship of the sun and moon, and other deities.

SABBATARIANS. Traces exist of Sabbatarii, or Sabbathaires, among the sects of the 16th century on the continent. Upon the publication of the "Book of Sports" in 1618, a violent controversy arose among English divines on two points: first, whether the Sabbath of the fourth commandment was in force among Christians; and secondly, whether, and on what ground, the first day of the week was entitled to be distinguished and observed as "the Sabbath." In 1628, Theophilus Brabourne, a clergyman, published the first work in favour of the Seventh-day or Saturday, as the true Christian Sabbath. He and several others suffered great persecution for this opinion; but after the restoration there were three or four congregations observing the last day of the week for public worship in London, and seven or eight in the country parts of England. In 1851 there were three Sabbatarian or Seventh-day Baptist congregations in England; but in America (especially in the New England states) they are more numerous.—Joseph Davis suffered imprisonment in 1670. He and his son bequeathed property to maintain the sect; and litigation respecting its disposal was settled by vice-chancellor Stuart in conformity with their intentions in June. 1870. Very few Sabbatarians then remained. The rev. Wm. Mead Jones, an eminent seventh-day Baptist in London, a profound scholar; died 22 Feb. 1895.

SABBATAI ZEVI, a false prophet, and the founder of a sect of semi-Christians and semi-Jews in the middle of the 17th cent. He announced the beginning of a Messianic reign, and it is said that in 1664 he had some 80,000 followers. He was put to death by the sultan of Turkey in 1677.

SABBATH, Heb. from *shabath*, "to rest." In the Decalogue the Sabbath is commanded to be observed as a day of rest for man and beast, the reason assigned being that God "rested the seventh day" from his labours in the work of creation; see *Gen.* ii.; *Exod.* xx. 8; *Isaiah* lviii. 13; and as a commemoration of the deliverance of the Israelites from bondage in Egypt, *Deut.* v. 15. The observance of the Sabbath by the Jews is first mentioned after the exodus of the Israelites from Egypt, but no direct evidence of its having been kept in patriarchal times is to be found in the Pentateuch (*which see*), although the formula "Remember" with which the fourth commandment begins might seem to imply that the observance of the Sabbath was familiar to the Israelites, but had fallen into neglect. In the later history of the Jews after the captivity the Sabbath was kept with great strictness, and the sanctity of the day guarded by many stringent rules. The Mishna, for example, enumerates 39 principal works which are forbidden on the Sabbath, and to each of these are attached several minor ones which might lead to breaking of the Sabbath. To such a degree was the holiness of the seventh day esteemed by the Jews that when Jerusalem was stormed by Ptolemy I. on a Sabbath the inhabitants would not stir to defend themselves. The early Christian Church observed the first day of the week in commemoration of the resurrection of Jesus Christ, and this gradually took the place of the Jewish Sabbath. The earliest law by which the observance of the first day of the week was ordained is the edict of Constantine, 321. The religious solemnization of the seventh day was not peculiar to the Jews. Prof. Sayce, "Ancient Empires of the East," states:—"In Babylonia and Assyria the week of seven days was an Accadian or Babylonian invention, the days of the week being dedicated to the moon, sun, and five planets. The 7th, 14th, 21st, and 28th days of the lunar month were kept like the Jewish Sabbath, and were actually so named in Assyrian. They were termed *dies nefasti* in Accadian, rendered 'days of completion (of labour)' in Assyrian; the Assyrian *Sabattu* or 'Sabbath' itself being further defined as meaning 'completion of work' and 'a day of rest for the soul.'"—See *Sunday*.

SABBATH-SCHOOLS, see *Sunday Schools*.

SABBATICAL YEAR: a Jewish institution, 1491 B.C. *Exodus* xxiii. During every seventh year the very ground had rest, and was not tilled; and every forty-ninth year all debts were forgiven, slaves set at liberty, and estates, &c., that were before sold or mortgaged, returned to their original families, &c.

SABELLIANISM, from Sabellius (of Ptolemais in Egypt), who flourished in the 3rd century, and who taught that there was but *one* person in the Godhead, the other persons of the Trinity being but different names of the same person. This doctrine was condemned at a council at Rome, 260.

SABINES, an ancient people of central Italy, from whom the Romans, under Romulus, took away their daughters by force, having invited them to some public sports or shows on purpose. When the Sabines determined to revenge this affront, the women became mediators to their fathers in behalf of their husbands, the Romans, and a lasting peace was made between them, 750 B.C. The Sabines, who had supported the Samnites in their war with Rome, were thoroughly defeated by M. Curius Dentatus, and their lands annexed 290 B.C., and eventually the Sabines were combined with the Roman people.

SACRAMENT (from *sacramentum*, an oath, obligation, also mystery). The Christian sacraments are baptism and the Lord's Supper. The council of Trent, in 1547, affirmed the doctrine of the schoolmen that there are *seven* sacraments, baptism, the Lord's Supper, confirmation, penance, holy orders, matrimony, and extreme unction. The name was given to the Lord's Supper by the Latin fathers. The wine was restricted to the clergy about the beginning of the 12th century. Communion in one kind only was authoritatively sanctioned by the council of Constance, 15 June, 1415. Henry VII. of Germany was poisoned by a priest by the consecrated wafer, 24 Aug. 1313. The sacramental wine was poisoned by the gravedigger of the church at Zürich, by which sacrilegious deed a number of persons lost their lives, 4 Sept. 1776. In 1614 members of both houses of parliament were ordered to take the sacrament, as a guard against the introduction of Roman Catholics. In 1673 the Test act was passed; repealed in 1828; see *Transubstantiation*.

"Society of the Blessed Sacrament" (English churchmen), London, founded, 1860; "Confraternity of the Blessed Sacrament," founded 1862; the two united, 1867.

SACRED BOOKS OF THE EAST. The publication of translations of the sacred books of the religion of the Brahmans, Buddhists, and Mohammedans, and of the followers of Khung-fu-tze and Lao-tze, edited by professor Max Müller, began in 1879. About 30 volumes have been published.

SACRED HARMONIC SOCIETY, see *Music*.

SACRED HEART OF JESUS, a form of devotion said to have been instituted in England in the seventeenth century, and much promoted by Marguerite Marie Alacoque, an enthusiastic French visitation nun who lived at Paray-le-Monial. She asserted that Christ had appeared to her, and taken out her heart, placed it in his own, glowing in flame, and then returned it. She died in 1690. Many churches have been dedicated to the Sacred Heart; the most splendid is that erected on Montmartre, in Paris, 1874-91, at the cost of about 1,000,000*l*. The festival of the Sacred Heart is held on Friday (in England, the Sunday) after the octave of Corpus Christi. A cloistered order of nuns of the Sacred Heart was founded by father Varin and Mme. Barat in Paris, in 1800; it has numerous houses in Europe, America, and Australia. The chief of these in England is at Roehampton, and in Ireland at Roscrea.

SACRED WARS.—I. Declared by the Amphictyons against Cirrha, near Delphi, for robbery and outrage to the visitors to the oracle, 595 B.C. Cirrha was razed to the ground, 586.—II. Between the Phocians and Delphians for the possession of the temple at Delphi, 448, 447.—III. The Phocians, on being fined for cultivating the sacred lands, seized the temple, 357. They were conquered by Philip of Macedon, and their cities depopulated, 346. See *Crusades*.

SACRIFICE was offered to God by Abel, *Gen.* iv. 4. Sacrifices to the gods were introduced into Greece by Phoroneus, king of Argos, 1773 B.C. Human sacrifices had their origin among primitive tribes. All sacrifices to the true God were to cease with the sacrifice of Christ, 33 A.D. *Heb.* x. 12-14. Pagan sacrifices were forbidden by the emperor Constantius II. 341. See Lang's "Myth, Ritual and Religion," and Tylor's "Primitive Culture."

SACRILEGE. In 1835, the punishment (formerly death) was made transportation for life. By 23 & 24 Vict. c. 96, s. 50 (1861), breaking into a place of worship and stealing therefrom was made punishable with penal servitude for life.

SADDLES. In the earlier ages the Romans used neither saddles nor stirrups. Saddles were in use in the 3rd century, and are mentioned as made of leather in 304, and were known in England about 600. Side-saddles for ladies were introduced by Anne, queen of Richard II. in 1388. *Stow.*

SADDUCEES, a Jewish sect, said to have been founded by Sadoc, a scholar of Antigonus, about 200 B.C., who, misinterpreting his master's doctrine, taught that there was neither heaven nor hell, angel nor spirit; that the soul was mortal, and

that there was no resurrection of the body from the dead. The Sadducees rejected the oral law, maintained by the Pharisees. See *Matt.* xxii. 23; *Acts* xxiii. 8.

SADLER'S WELLS (N. London), so called after Mr. Sadler, who built an orchestra to entertain the invalids who used the waters medicinally, 1683. In time the orchestra was enclosed, and the building became a place for dramatic performances. The theatre was opened in 1765. Eighteen persons were trampled to death at this theatre, on a false alarm of fire, 18 Oct. 1807; see under *Theatres*. Now (1905) a music-hall.

SAFES. A National Safe Company, London, opened vaults for storage of valuables, 1876.

SAFETY LAMP. One was invented in 1815 by sir Humphry Davy, to prevent accidents which happen in coal and other mines. The safety-lamp is founded on the principle that flame, in passing through iron-wire meshes, loses so much of its heat as to be incapable of igniting inflammable gases. The father of all safety-lamps was Dr. Reid Clanny, of Sunderland, whose invention and improvements are authenticated in the *Transactions of the Society of Arts* for 1817. The "Geordy," constructed by George Stephenson, the engineer, in 1815, is said to be the safest. A miner's electric light, by MM. Dumas and Benoit, was exhibited in Paris on 8 Sept. 1862. On 14 Aug. 1867, safety-lamps were rigidly tested by several mining engineers, and serious doubts thrown upon their complete efficacy. Col. Shakespear's safety lamp (light extinguished by opening) exhibited at Royal Institution, &c., May, 1879. Messrs Fleuss and Foster's new safety mining lamp approved, Jan. 1884.

Mr. J. Wilson-Swan's electric safety lamp, weighing 6½ lb. exhibited at Aberdeen meeting of British Association, Sept. 1885.

Mr. Charles D. Aria's safety lamp reported successful; the supply of mineral oil is isolated from the burner, 1889.

The Thornbury miners' lamp (patented 16 Feb 1889) tried at Aldwarke Main Collieries by Mr. C. E. Rhodes, and subjected to experiments by prof. Dewar and sir Frederick Abel, who declare that this lamp fulfils the conditions required by the royal commission in 1886. Paraffin and other mineral oils may be used in this lamp, reported Nov. 1889.

SAFFRON (*saffran*, French; *saffrano*, Italian), the flower of crocus, was first brought to England in the reign of Edward III. by a pilgrim, about 1339, probably from Arabia, as the word is from the Arabic *zaphar*. *Miller*. It was cultivated in England in 1582.

SAGAS. Early Icelandic tales, dated from the 10th century, see *Eddas*.

SAGE (*Sauge*, French; *Salvia*, Latin), a wholesome herb. *Mortimer*. The Mexican sage, *Salvia mexicana*, was brought from Mexico, 1724. The blue African sage, *Salvia africana*, and the golden African sage, *Salvia aurea*, were brought to England from the Cape of Good Hope in 1731.

SAGUNTUM, or **ZACYNTHUS**, now Murviedre, in Valentia, E. Spain, renowned for the dreadful siege it sustained, 219 B.C. The citizens, after performing incredible acts of valour for eight months, chose to be buried in the ruins of their city rather than surrender to Hannibal. They burnt themselves, with their houses, and the conqueror became master of a pile of ashes, 218 B.C.

SAHARA, a great sandy desert, North Africa, south of Barbary States. A project for making an inland sea here was entertained in 1883, and the construction of a railway was proposed in Algeria, Oct. 1890. A large natural reservoir of water at El Golea in the desert, was discovered early 1891. M. Foureau's 12 years' exploration, rich in scientific results, see *French West Africa*, 1898-1900. M. In one year it admitted 5,444 boarders, who, besides home, had evening instruction, the use of a savings' bank, &c. Near here the British and allies, commanded by lord Wellington, totally defeated the French army under marshal Marmont, 22 July, 1812. The loss of the victors was most severe, amounting in killed, wounded, and missing, to nearly 6,000 men. Marmont left in the victor's hands 7,141 prisoners, 11 pieces of cannon, 6 stands of colours, and 2 eagles. This victory was followed by the capture of Madrid. Population, 1887, 22,199.

SALAMIS (near Athens). In a great sea-fight here, 20 Oct. 480 B.C., Themistocles, the Greek commander, with only 310 sail, defeated the fleet of Xerxes, king of Persia, which consisted of 1,000 sail.—Near Salamis, in Cyprus, the Greeks defeated the Persian fleet, 449 B.C.; and Demetrius Poliorcetes defeated the fleet of Ptolemy and his allies, 306 B.C.

SALDANHA BAY, S. Atlantic Ocean; northward of the Cape of Good Hope. Here on 17 Aug. 1796, a Dutch squadron, under admiral Lucas, was

captured by vice-admiral sir George Keith Elphinstone, without resistance; sir George was created lord Keith.

SALIQUE or SALIC LAW, by which females are excluded from inheriting the crown of France, is said to have been instituted by Pharamond, 424, and ratified in a council of state by Clovis I., the real founder of the French monarchy, in 511. *Hénault.* This law, introduced into Spain by the Bourbons 1700, was formally abolished by decree 29 March, 1830; and on the death of Ferdinand VII. his daughter succeeded as Isabella II., 29 Sept. 1833; see *Spain* By this law also Hanover was separated from England, when queen Victoria ascended the English throne, 1837.

SALISBURY (Wilts), founded in the beginning of the 13th century, on the removal of the cathedral hither from Old Sarum. National councils or parliaments were repeatedly held at Salisbury, particularly in 1296, by Edward I.; in 1328, by Edward III.; and in 1384 Henry Stafford, duke of Buckingham, was executed here by order of Richard III., in 1483.—On SALISBURY PLAIN is Stonehenge (*which see*). This plain was estimated at 500,000 acres. On it were so many cross roads, and so few houses to take directions from, that Thomas, earl of Pembroke, planted a tree at each milestone from Salisbury to Shaftesbury, for the traveller's guide. The autumn military manœuvres took place on Salisbury Plain, Aug., Sept. 1872; again 31 Aug. 1898, and since; see under *Army.*—The first seat of the BISHOPRIC was at Sherborne, St. Aldhelm being prelate, 705. Herman removed the seat to Old Sarum, about 1072; and the see was removed to Salisbury by a papal bull, in 1217. It has yielded to the church of Rome one saint and two cardinals. The building of the cathedral commenced 28 April, 1220, and was completed in 1258. This edifice is reckoned one of our finest ecclesiastical erections. Its spire, the loftiest in the kingdom, was considered in danger in April, 1864, and subscriptions were begun for its immediate repair. The choir was re-opened, after restoration by sir G. G. Scott, 1 Nov. 1876; spire and turrets restored under sir Arthur Blomfield, March, 1898. The bishopric is valued in the king's books at 1,367*l.* 11*s.* 8*d.* Present income 5,000*l.* Population, 1881, 14,792; 1891, 15,980; 1901, 17,117.

An act restricting the capture of salmon at certain times, passed in 1863, was amended in 1869-1870, and 1873. During the "salmon fence," 14 Sept. to 1 Feb., it is unlawful to catch fish of the salmon kind.

SALONICA, see *Thessalonica.*

SALT (chloride of sodium, a compound of the gas chlorine and the metal sodium) is procured from the rocks in the earth, from salt-springs, and from sea-water. The famous salt-mines of Wielitzka, near Cracow in Poland, have been worked 600 years. The salt-works in Cheshire, called the WICHES (Nantwich, Northwich, and Middlewich), were of great importance in the time of the Saxon heptarchy. The salt-mines of Staffordshire were discovered about 1670. Salt duties were first exacted in 1702; they were renewed in 1732; reduced in 1823; and in that year were ordered to cease in 1825. During the French war the duty reached to 30*l.* per ton. For the salt-tax in France see *Gabelle.* The government salt monopoly in India was abolished in May, 1863, by sir C. Trevelyan. Since 1797 salt has been largely employed in the manufacture of chloride of lime or bleaching powder (by obtaining its chlorine), and soap (by obtaining its soda). On this are based the chemical works of Cheshire, Lancashire, and other places. See under *Alkalies.*

Much distress in the salt districts of Cheshire through the subsidence of land, 1887-8. The proprietors of the Cheshire salt mines combined to form a "trust" or syndicate in the autumn of 1888; central office, Northwich; the trade being nearly ruined by great competition, first meeting 27 Sept. 1888.

SALT-PETRE (from *sal petræ*, salt of the rock), or Nitre, is a compound of nitric acid and potash (nitrogen, oxygen, and potassium), and hence is called nitrate of potash. It is the explosive ingredient in gunpowder, many detonating powders, and lucifer matches. Boyle in the 17th century demonstrated that salt-petre was composed of aqua fortis (nitric acid) and potash; the discoveries of Lavoisier (1777) and Davy (1807) showed its real composition. Its manufacture in England began about 1625. During the French revolutionary war, the manufacture was greatly increased by the researches of Berthollet.

SALUTE AT SEA. It is a received maxim at sea, that he who returns the salute always fires fewer guns than he receives, which is done even between the ships of princes of equal dignity; but the Swedes and Danes return the compliment without regarding how many guns are fired to them. The English claim the right of being saluted first in all places, as sovereigns of the seas; the Venetians claimed this honour within their gulf, &c. The admiralty issued a code of rules for salutes, Dec. 1876. See *Flag*, and *Naval Salute.*

SARDIS, see under *Seven Churches*.

SARMATIA, the ancient name for the country in Asia and Europe between the Caspian Sea and the Vistula, including Russia and Poland. The Sarmatæ or Sauromatæ troubled the early Roman empire by incursions. After subduing the Scythians they were subjugated by the Goths, in the 3rd and 4th centuries. They joined the Huns and other barbarians in invading Western Europe in the 5th century.

SARNO (S. Italy). Near this river, Teias, king of the Goths, was defeated and slain by Justinian's general Narses, March, 553.

SARUM, OLD (Wiltshire), an ancient British town, the origin of Salisbury (*which see*). Although completely decayed, it returned two members to parliament till 1832.

SASSANIDES, descendants of Artaxerxes or Ardishir, whose father, Babek, was the son of Sassan. He revolted against Artabanus, the king of Parthia; defeated him on the plain of Hormuz, 226; and re-established the Persian monarchy. This dynasty was expelled by the Mahometans, 652; see *Persia*.

SATAN, see *Devil Worship*.

SATIRE. About a century after the introduction of comedy, satire made its appearance at Rome in the writings of Lucilius, called the inventor of it, 116 B.C. *Livy*. The Satires of Horace (35 B.C.), Juvenal (about A.D. 100), and Persius (about A.D. 60), are the most celebrated in ancient times, and those of Churchill (1761) and Pope (1729), in modern times. Butler's "Hudibras," satirizing the presbyterians, first appeared in 1663. *Satire Menippée*, a celebrated satirical pamphlet, partly in verse and partly in prose, attacking the policy of the court of Spain and the league, written in the style of the biting satires of the cynic philosopher Menippus. The first part, "Catholicon d'Espagne," by Leroy, appeared in 1593, the second, "Abrégé des Etats de la Ligue," by Gillot, Pithou, Rapin, and Passerat, appeared in 1594. *Bouillet*.

SATRAPIES, divisions of the Persian empire, formed by Darius Hystaspes about 516 B.C.

SATTARA (W. India) was long a flourishing state, founded by Sevajee about 1646, subjugated by the Mahrattas about 1749; conquered by the British, 1818; ruled by a rajah under the protection of the company. The last rajah died without issue in 1848; when the country was annexed.

SATURDAY (the last, or seventh day of the week, the Jewish Sabbath; see *Sabbath*). It was so called from an idol worshipped on this day by the Saxons, and according to Verstegan, was named by them Saterne's day. *Pardon*. It is more probably from Saturn, *dies Saturni*. *Saturday Review*, an independent literary weekly journal, was first published, 3 Nov. 1855. See *Hospital* and *Lifeboat*.

SATURN, the planet, ascertained to be about 900 millions of miles distant from the sun, and its diameter to be about 77,230 miles. One of the 10 satellites was discovered by Huyghens (25 March, 1655); four by Cassini (1672-84); two by sir William Herschel (1789), one by Bond and Lassell (1848), and one by prof. Pickering in Arizona, U.S. (18 March, 1899). The 10th satellite was discovered by prof Pickering, 29 April, 1905. The ring was observed by Galileo, about 1610; its annular form determined by Huyghens, about 1655. Cassini discovered that the ring consisted in fact of two concentric rings, the inner brighter than the outer, in 1675. An inner ring was detected in 1850 by Dawes in England (29 Nov.), and by Bond in America. The ring, or series of concentric rings, is now considered to be composed of a multitude of small satellites.

SATURNALIA, festivals in honour of Saturn, father of the gods, were instituted long before the foundation of Rome, in commemoration of the freedom and equality which prevailed on the earth in his golden reign. Some, however, suppose that the Saturnalia were first observed at Rome in the reign of Tullus Hostilius (673-640 B.C.), after a victory obtained over the Sabines whilst others suppose that Janus first instituted them in gratitude to Saturn, from whom he had learned agriculture. Others assert that they were first celebrated after a victory obtained over the Latins by the dictator Posthumius, when he dedicated a temple to Saturn, 497 B.C. During these festivals no business was allowed, amusements were encouraged, and distinctions ceased.

SAVAGE CLUB, instituted by various literary men, in 1857, facetiously terming them-

selves "savages," on account of their freedom from conventionalism. Mr. W. E. Gladstone was present at the 22nd anniversary, 14 June, 1879, and the king, then prince of Wales, was a visitor in 1882.

SAVAGE ISLAND was discovered by capt. Cook in 1774, and so named because of the fierce attack made by the natives on his party. The island has long been a field of missionary enterprise; the inhabitants, about 5,000, are now Christians, and it was ceded to Great Britain by the Samoa agreement, Nov. 1899.

SAVANDROOG or **SEVERNDROOG** (Mysore, S. India), a strong fortress, was captured by the British, 2 April, 1755, and 21 Dec. 1791.

SAVANNAH, a city and port of Georgia on the river Savannah, U.S.A., founded in 1733, and incorporated, 1789; it was taken by the British in the American war in 1778, and by gen. Sherman, the northern general, 21 Dec. 1864. Pop. 1880, 30,709; 1890, 43,189; 1900, 54,244.

SAVINGS' BANKS. The first of these was instituted at Berne, in Switzerland, in 1787, by the name of *caisse de domestiques*, being intended for servants only; another was set up in Basel, in 1792, open to all depositors. The rev. Joseph Smith, of Wendover, began a Benevolent Institution in 1799; and in 1803-4, a "charitable bank" was instituted at Tottenham by Miss Priscilla Wakefield. The rev. Henry Duncan established a parish bank at Ruthwell in 1810. One was opened in Edinburgh in 1814. The benefit clubs, among artisans, having accumulated stocks of money for their progressive purposes, a plan was adopted to identify these funds with the public debt of the country, and an extra rate of interest was held out as an inducement; hence were formed savings' banks to receive small sums, returnable with interest on demand.

Rt. hon. Geo Rose developed the system, and brought it under parliamentary control, 1816.

In 1840 there were 550 banks, 766,354 depositors, amount, 22,060,904*l.*

Acts to consolidate and amend previous laws relating to savings' banks were passed in 1828 and 1847, extended to Scotland in 1835; again consolidated and amended in 1863, 1880, and 1887.

On 20 Nov. 1851, the number of savings' banks in Great Britain and Ireland was 574, besides above 20,000 friendly societies and charitable institutions The depositors (in the banks) were 1,092,581, while the societies embraced a vast but unknown number of persons: the amount of deposits was 32,893,511*l.*

SAVONA (a manufacturing town, N. Italy, long held by the Genoese) was captured by the king of Sardinia in 1746; by the French in 1809, and annexed; restored to Sardinia at the peace. Pope Pius VII. was kept here by Napoleon I., 1809-12. Soap is said to have been invented here, and hence its French name *savon*.

SAVOY, the ancient *Sapaudia* or *Sabaudia*, formerly a province in N. Italy, east of Piedmont. It became a Roman province about 118 B.C. The Alemanni seized it in A.D. 395, and the Franks in 490 It shared the revolutions of Switzerland till about 1048, when Conrad, emperor of Germany, gave it to Humbert, with the title of count. Count Thomas acquired Piedmont in the 13th century. Amadeus, count of Savoy, having entered his dominions, solicited Sigismund to erect them into a duchy, which he did at Cambray, 19 Feb. 1416. Victor-Amadeus, duke of Savoy, obtained the kingdom of Sicily from Spain, by a treaty, in 1713, but afterwards exchanged it with the emperor for the island of Sardinia, with the title of king, 1720. The French subdued Savoy in 1792, and made it a department of France, under the name of Mont Blanc, in 1800. It was restored to the king of Sardinia in 1814; but with Nice annexed to France in 1860, in accordance with a vote by universal suffrage, 23 April, 1860. The annexation was censured in England.

SAVOY PALACE (London), was built by Peter of Savoy, uncle of Eleanor, queen of Henry III., in 1245, on land granted to him. He gave it to the fraternity of Mountjoy (Monte Jovis), from whom it was purchased by queen Eleanor for her son Edmund. Here resided John, king of France, when a prisoner, 1357 *et seq.* The Savoy was burnt by Wat Tyler and his followers, 1381. It was restored as an hospital of St. John the Baptist by Henry VII. about 1505. The fruitless CONFERENCE of bishops and eminent puritans for the revision of the liturgy was held at the Savoy, April-July, 1661. The hospital was dissolved in 1702. The buildings (used as a military prison) were removed to make way for Waterloo-bridge and its approaches, 1817-19. The privilege of sanctuary which the ancient *Chapel* formerly possessed, and which was much abused, was abolished by parliament in 1697. The *Chapel* after several restorations, was destroyed by fire, 7 July, 1864, and was rebuilt at queen Victoria's expense, and re-opened 26 Nov. 1865.

SAW. Invented by Dædalus. *Pliny.* Invented by Talus. *Apollodorus.* Talus, it is said, having found the jaw-bone of a snake, employed it to cut through a piece of wood, and then formed an instrument of iron like it. Saw-mills were erected in Madeira in 1420; at Breslau in 1427. Norway had the first saw-mill in 1530. The bishop of Ely, ambassador from Mary of England to the court of Rome, describes a saw-mill there, 1555. The attempts to introduce saw-mills in England were violently opposed, and one erected by a Dutchman in 1603 was forced to be abandoned. Saw-mills were erected near London about 1770. The circular saw was introduced into England about 1790. The *saw-gin* for separating cotton wool from the pod, invented by Eli Whitney, an American, in 1793, led to the immense growth of cotton in the southern states of the Union. Powis and James's band-saw was patented in 1858.

SAXONY, a kingdom in N. Germany. The Saxons were a fierce warlike race, the terror of the inhabitants of the later western empire, frequently attacked France, and conquered Britain (*which see*). After a long series of sanguinary conflicts they were completely subdued by Charlemagne, who instituted many fiefs and bishoprics in their country. Witikind, their great leader, who claimed descent from Woden, professed Christianity about 785. From him descended the first and the present ruling family of Wettin (the houses of Supplinburg, Guelf, and Ascania intervened from 1106 to 1421). SCOTTISH HISTORY society founded in Edinburgh in 1886.

SCOURERS, see *Mohocks*.

SCOURING OF THE WHITE HORSE, see *Ashdown*.

SCREW, was known to the Greeks. The pumping-screw of Archimedes, or screw-cylinder for raising water, invented about 236 B.C., is still in use. It is stated that with the assistance of the screw, one man can press down or raise up as much as 150 men can do without it.—The SCREW-PROPELLER consists of two or more twisted blades, like the vanes of a windmill, set on an axis, running parallel with the keel of a vessel, and revolving beneath the water at the stern. It is driven by a steam-engine. The principle was shown by Hooke in 1681, and afterwards by Du Quet, Bernouilli, and others. Patents for propellers were taken out by Joseph Bramah in 1784; by Wm. Lyttelton in 1794; and by Edward Shorter in 1799. But these led to no useful result. In 1836 patents were obtained by Francis Pettit Smith (knighted July, 1871; died, 12 Feb. 1874) and captain John Ericsson (died, aged 86, March, 1889); and to them the successful application of the screw-propeller must be attributed. The first vessels with the screw were the *Archimedes*, built on the Thames in 1838 by H. Wimshurst, and the *Rattler*, built in the United

States (1844), and tried in England in 1845. Double screw-propellers are now employed. A new form of screw-propeller invented by col. W. H. Mallory, of U.S.A. army, was tried on the Thames and reported successful, Aug. 1878.

SCRIPTURE KNOWLEDGE INSTITUTION, Bristol, was founded by George Müller, a Prussian (born 1805, died 10 March, 1898). He came to Bristol as a minister of the "Brethren" in 1832, and on 5 March, 1834, founded this institution, the objects of which are: 1. Assistance of schools giving instruction on scriptural principles; 2. Circulation of the scriptures; 3. Assistance to missions; 4. Circulation of tracts; 5. Provision for destitute orphans, see *Orphan-houses*. Without application, Mr. Muller, since he began, up to 26 May, 1895, had received by voluntary contribution, 1,373,348*l.* 6*s.* 2*d.*

SCROFULA, see *King's-evil*.

SCRUTIN (French for ballot). In *scrutin de liste* the voter writes on his paper as many names as there are persons to be elected, for instance for the whole department. In *scrutin d'arrondissement*, the members are elected separately. The adoption of one of these modes was much discussed in France in 1875. The conservatives prefer the latter, the radicals the former. See *France*, Nov. 1875. The *scrutin de liste* was adopted in the elections of 1848, 1849, 1871, and 1875.

M. Bardoux's bill for adopting the *scrutin de liste* (warmly advocated by M. Gambetta), was passed by the chamber of deputies (243-235), 18 May, 1881; rejected by the senate (148-114), 9 June, 1881; again rejected, Jan. 1882.

M. Waldeck-Rousseau's bill for the *scrutin de liste* passed by the deputies (412-99), 24 March, finally passed, 8 June, 1885.

The bill for the restoration of the *scrutin d'arrondissement* passed by the chamber 11 Feb. and senate 13 Feb. 1889.

The *scrutin de liste* was adopted by the Italian chamber, 14 Feb. 1882.

SCULLABOGUE, see *Massacres*, 1798.

SCULPTURE is said to have begun with the Egyptians. Bezaleel and Aholiab built the tabernacle in the wilderness, and made all the vessels and ornaments, 1491 B.C., and their skill is recorded as the gift of God. *Exod.* xxxi. 3 Dipœnus and Scyllis, statuaries at Crete, established a school at Sicyon. Pliny speaks of them as being the first who sculptured marble and polished it; all statues before their time being of wood, 568 B.C. Alexander gave Lysippus the sole right of making his statues, 326 B.C. He left no less than 600 pieces, some of which were so highly valued in the age of Augustus, that they sold for their weight in gold. Sculpture did not flourish among the Romans, and in the middle ages with some fine exceptions, was generally degraded. With the revival of painting, it revived also; and Donato di Bardi, born at Florence, A.D. 1383, was the earliest professor among the moderns. An institute of sculptors was established in 1861. The society of British sculptors was inaugurated 26 Jan. 1904. See *Royal Academy* and *Statues*.

SCUTAGE or **ESCUAGE**. The service of the shield (scutum) is either uncertain or certain. Escuage uncertain is where the tenant by his tenure is bound to follow his lord; and is called Castleward, where the tenant is bound to defend a castle. Escuage certain is where the tenant is set at a certain sum of money to be paid in lieu of such uncertain services. The first tax levied in England to pay an army, 5 Hen. II. 1159. *Cowel.*

SCUTARI, Asiatic Turkey, opposite Constantinople, of which it is a suburb. It was anciently called *Chrysopolis*, golden city, in consequence, it is said, of the Persians having established a treasury here when they attempted the conquest of Greece. Near here Constantine finally defeated Licinius, 323.

The hospital was occupied by the sick and wounded of the Anglo-French army, in 1854-5, whose sufferings were much alleviated by the kind exertions of Miss Florence Nightingale and a band of nurses under her, aided by a large fund of money (15,000*l.*) subscribed by the public and placed in the care of the proprietors of the *Times* newspaper; see *Times*. Explosion of powder magazine by lightning, about 150 killed, 8 June, 1883. Population, 1901, about 82,400.

SCYLLA AND CHARYBDIS. Two sea-monsters who, according to the Homeric legend, dwelt on the opposite sides of a narrow sea-strait. Scylla had 12 feet, 6 long necks and mouths, with 3 rows of sharp teeth in each mouth, and barked like a dog. Charybdis, who dwelt under a cliff, three times a day sucked down the sea and threw it up again. Ulysses sailed by these monsters, but lost 6 of his crew, who were seized by Scylla. In later times, the name of Charybdis was applied to a "race" or rapid in the straits of Messina, regarded as specially dangerous to navigators, because in avoiding it they ran the risk of being wrecked on Scylla, a rock opposite. Hence the proverb: "To shun Charybdis and fall into Scylla."

SCYTHIA, situate in the most northern parts of Europe and Asia. The boundaries were unknown to the ancients. The Scythians made several irruptions upon the more southern provinces of Asia, especially 624 B.C., when they remained in possession of Asia Minor for twenty-eight years, and at different periods extended their conquests in Europe, penetrating as far as Egypt; see *Tartary*.

SEA. Lieut. Maury first published his "Physical Geography of the Sea" in 1854, and other important works since, he died Feb. 1873; see *Deep Sea*.

SEA BIRDS' PRESERVATION ACT, passed 24 June, 1869.

SEA FIGHTS, see *Naval Battles*.

SEA FISHERIES, see *Fisheries*, and *Behring Straits*.

SEAL FISHERY ACT, passed 14 June, 1875; another act, 29 June, 1893, see *Behring Straits*. Seal fisheries (N. Pacific) act, relating to Russia, passed, 27 June, 1895.

SEALS or **SIGNETS.** Engraved gems were used as such by the Egyptians, Jews, Assyrians, and Greeks; see *Exod.* xxviii. 14. Ahab's seal was used by Jezebel, 899 B.C. (1 *Kings* xxi. 8). The Romans in the time of the Tarquins (about 600 B.C.) had gemmed rings. They sealed rooms, granaries, bags of money, &c. The German emperor, Frederick I. (A.D. 1152) had seals of gold, silver, and tin. Impressions of the seals of Saxon kings are extant; and the English great seal is attributed to Edward the Confessor (1041-66). "A seal with armorial bearings before the 11th century, is certainly false." *Fosbroke*. The most ancient English seal with arms on it is said to be that of Richard I. or John. White and coloured waxes were used. Our present sealing-wax, containing shellac, did not come into general use in Germany and England until about 1556. Red wafers for seals came into use about 1624; but were not used for public seals till the 18th century. A seal acquired by the British Museum made of black hematite, thought to be Hittite, found at Yuzgat in Asia Minor, announced Nov. 1886. *Seal Society*, for publication of fac-similes of ancient seals, was established in 1883.—For **SEALED LETTERS,** see *Great Seal* and *Lettres de Cachet*.

SEAMEN. In consequence of the great loss of life by wrecks of merchant vessels, attributed to bad ships and overloading, a commission of inquiry was agreed to by parliament on the motion of Mr. S. Plimsoll (who published "Our Seamen: an Appeal"), 4 March, 1873. The duke of Edinburgh was on the commission; the duke of Somerset, chairman.

The report issued in September tended to justify the public apprehensions, but suggested no remedy. The report presented to parliament, 2 July, 1874, condemned the existing insurance system, and recommended increased responsibility of owners and others, and strengthening the powers of the Board of Trade for investigation.

The Merchant Shipping Survey bill was rejected (173—170) . . . . . 24 June, 1874

After much excitement, an act was passed to give further powers to the Board of Trade to stop unseaworthy ships . . . . . 13 Aug. 1875

SEAS, SOVEREIGNTY OF THE. The claim of England to rule the British seas is of very ancient date. Arthur is said to have assumed it, and Alfred afterwards supported this claim. It was maintained by Selden, and measures were taken by government in consequence, 8 Chas. I. 1633. The Dutch, after the death of Charles I., made some attempts to obtain it, but were roughly treated by Blake and other admirals. Russia and other powers of the north armed to avoid search, 1780; again, 1800; see *Armed Neutrality* and *Flag*. The international rule of the road at sea was settled in 1862; (new rules were issued in 1879 and 19 Aug. 1884), yet near Great Britain alone there have been 13,000 collisions in six years. Mr. Wm. Stirling Lacon proposed to reduce the rules from 749 words to 144, for simplicity and security. His form had been nine times before parliament, 1873. Revised rules issued by the admiralty in a "Fleet Circular," Nov. 1885.

The British Board of Trade appointed a committee to consider measures for the establishment of a "new rule of the road at sea", first meeting, 1 Aug. 1890

The committee adopted the regulations recommended by the Washington conference in 1889 (see *Navigation Laws*), in spite of much opposition from the Chamber of Shipping of the United Kingdom, the General Shipowners' Society of London, the committee of Lloyd's, and other kindred bodies; reported Dec. 1894.

Committee appointed by the board of trade, March, 1895; report issued, the new rules supported but simplification recommended, April, 1896; another committee appointed respecting collisions at sea, May, 1897; final report 13 May; rules to be enforced . . . . . 1 July, 189

SEA SERPENT, GREAT, the name given to an animal popularly believed to exist, especially in deep tropical seas, but much controverted by zoologists, sir Richard Owen and others.

Capt. M'Quhae described the appearance of such an animal in the South Atlantic ocean in 1848. Other descriptions have been since published, and many explanations have been suggested. "The Great Sea Serpent," by Mr. A. C. Oudemans, published in 1893, contains reports of 187 appearances, with 82 illustrations.

SEBASTIAN, ST. (N. Spain), was taken by the French, under the duke of Berwick, in 1719. It was besieged by the British and allied army under Wellington. After a most heavy bombardment, by which the whole town was laid nearly in ruins, it was stormed by general Graham (afterwards lord Lynedoch), and taken 31 Aug. 1813.—On 5 May, 1836, the fortified works, through the centre of which run the high road to Hernani, were carried by the English auxiliary legion under general Evans, after very hard fighting. The British naval squadron, off St. Sebastian, under lord John Hay, lent very opportune aid to the victors in this contest.—A vigorous assault was made on the lines of general De Lacy Evans, at St Sebastian, by the Carlists, 1 Oct. 1836. Both parties fought with bravery. The Carlists were repulsed, after suffering severely. The loss of the Anglo-Spanish force was 376 men and 37 officers, killed and wounded. General De Lacy Evans was slightly wounded. See under *Leagues*. Population, 1887, 29,047.

SEBASTOPOL or **SEVASTOPOL,** a town and once a naval arsenal, at S.W. point of the Crimea, formerly the little village of Aktiar. The buildings were commenced in 1784, by Catherine II. after the conquest of the country. The town is built in the shape of an amphitheatre on the rise of a large hill flattened on its summit, according to a plan laid down before 1794, which has been since adhered to. The fortifications and harbour were constructed by an English engineer, colonel Upton, and his sons, since 1830. This place underwent eleven months' siege, by the English and French in 1854 and 1855. Immediately after the battle of the Alma, 20 Sept. 1854, the allied army marched to Sebastopol, and took up its position on the plateau between it and Balaklava, and the grand attack and bombardment commenced 17 Oct. 1854, without success.* After many sanguinary encounters by day and night, and repeated bombardments, a grand assault was made on 8 Sept. 1855, upon the Malakhoff tower and the Redans, the most important fortifications to the south of the town. The French succeeded in capturing and retaining the Malakhoff. The attacks of the English on the great Redan and of the French upon the little Redan were successful, but the assailants were compelled to retire after a desperate struggle with great loss of life. The French lost 1646 killed, of whom 5 were generals, 24 superior and 116 inferior officers, 4500 wounded, and 1400 missing. The English lost 385 killed (29 being commissioned and 42 non-commissioned officers), 1886 wounded, and 176 missing. In the night the Russians abandoned the southern and principal part of the town and fortifications, after destroying as much as possible, and crossed to the northern forts. They also sank or burnt the remainder of their fleet. The allies found a very great amount of stores when they entered the place, 9 Sept. The works were utterly destroyed in April, 1856, and the town was restored to the Russians in July; gen. Todleben, the able defender, died 1 July, 1884, and was buried here, his monument uncovered 28 June, 1890. See *Russo-Turkish War.* Population of Sebastopol, 1885, 33,803; 1897, 50,710. Made a naval port, Sept. 1895; new dock, opened, 18 May, 1898. Monument to adm. Nakhimoff unveiled by the czar, 30 Nov. 1898.

SECRET SOCIETIES, *Assassins, Fenians, Ribbonism, Vehmic Tribunal, Rosicrucians, Illuminati, Carbonari, Mary-Anne, Nihilists.*

SECRETARIES OF STATE. The earliest authentic record of a secretary of state is in the reign of Henry III., when John Maunsell is described as "*Secretarius Noster,*" 1253. *Rymer.* Towards the close of Henry VIII.'s reign, two secretaries were appointed; and upon the union with Scotland, Anne added a third as secretary for Scotch affairs; this appointment was afterwards laid aside; but in the reign of George III. the number was again increased to three, one for the American department. In 1782 this last was abolished by act of Parliament; and the secretaries were appointed for home, foreign, and colonial affairs. When there were but two secretaries, one held the *portefeuille* of the Northern department, comprising the Low Countries, Germany, Denmark, Sweden, Poland, Russia, &c.; the other, of the Southern department, including France, Switzerland, Italy, Spain, Portugal, and Turkey; the affairs of Ireland belonging to the elder secretary; both secretaries then equally directed the home affairs. *Beatson.* There are now six secretaries—home, foreign, colonial, war, (in 1858) India, and (in 1885) Scotland, all in the cabinet. Secretary of State for Scotland act passed 14 Aug. 1885, amended 1887, explained 1889. See *Administrations,* and separate articles.

The Institute of Secretaries was started at a meeting in London, 4 July, 1890, to collect information respecting the position, duties, and responsibilities of secretaries to be applied for their benefit. First dinner, 24 June, 1892. Annual meetings.

* In consequence of the sufferings and disasters of the army in the winter of 1854-5, the Sebastopol Inquiry Committee was appointed, and the Aberdeen administration resigned, Feb. 1855. The committee sat from 1 March to 15 May, lord Aberdeen being the last person examined. Its report was presented 18 June. Mr. Roebuck, the chairman, moved on 17 July that the house should pass a vote of severe reprehension on every member of the Aberdeen administration. On 19 July his motion was lost by a majority of 107 against it. In 1855 the government sent sir John M'Neill and col. Tulloch to inquire into the state of the armies in the Crimea. Their report was presented to parliament in Feb 1856. A commission was appointed to consider the statements in the report (which were very unfavourable to many officers), but the substance of the report was unshaken.

SECTS, RELIGIOUS, see under *Worship*, and their respective titles.

SECULAR GAMES (*Ludi Sæculares*), very ancient Roman games, celebrated on important occasions. Horace wrote his "Carmen Sæculare" for their celebration in the reign of the emperor Augustus (17). They took place again in the reign of Claudius (47), of Domitian (88), and for the last time, of Philip (248).

SECULARISM, a name given to the principles advocated by G. J. and Austin Holyoake, about 1846, and subsequently by Mr. Bradlaugh (died 30 Jan. 1891). Mr. G. J. Holyoake died 22 Jan. 1906.

Its central idea is free, not lawless thought, and it considers scepticism to be scrutiny. It advocates liberty of action without injury to others It is not against Christianity, but independent of it Its standard is utilitarian, it is the religion of the present life only; teaching men to seek morality in nature, and happiness in duty. Messrs. Austin and G J Holyoake and other secularists repudiated atheism.

SECURITY FROM VIOLENCE ACT, passed in 1863, appointed whipping as part of the punishment for attempts at garotting.

SEDAN, an ancient fortified city in the valley of the Meuse, N.E of France, the seat of a principality long held by the dukes of Bouillon. On 6 July, 1641, a victory was gained at La Marfée, near Sedan, by the count of Soissons and the troops of Bouillon and other French princes, over the royal army supporting Richelieu; but the count was slain on 23 June, 1642. The duke was arrested in the midst of his army, and was made to cede Sedan to the crown. The protestant university was abolished after the revocation of the edict of Nantes, 22 Oct. 1685. Around this place a series of desperate conflicts on 29, 30, and 31 Aug between the French army of the north, under marshal MacMahon (about 150,000 men) and the greater part of the three German armies under the king and crown-prince of Prussia and the crown-prince of Saxony (about 250,000 men) was brought to a close on 1 Sept. 1870.

The emperor Napoleon was present during the battle, and, it is said, stood at Iges, near Sedan, exposed for four hours on 1 Sept. to the German grenades The impossibility of further resistance was then evident The Germans had contracted their circle close round Sedan; their formidable artillery held all the heights, from which they could at pleasure wholly destroy the town and the army, and only 2000 men were in a condition to respond to their commander's call, and to make a supreme effort to break through the enemy with the emperor and escape to Montmédy

At first general de Wimpffen (called to the command when MacMahon was wounded) indignantly rejected the terms offered by the victor, and the emperor had a fruitless interview with count Bismarck to endeavour to mitigate them.

On 2 Sept. the emperor wrote in autograph to the king of Prussia, "Mon frère, n'ayant pu mourir à la tete de mes troupes, je dépose mon épée au pied de votre majesté NAPOLEON." A capitulation of Sedan and the whole army therein was signed by generals Von Moltke and De Wimpffen at the château of Bellevue, near Frenois, at 11 30 a m, and at 2 p m an interview took place between the king and the emperor.

The conflict was principally carried on by the artillery, in which the Germans had the advantage, not only in number (600 to 500), but also in weight, range, and precision. The carnage was awful, and the field the next day was a mass of shattered bones, torn flesh, and coloured rags.

About 25,000 French prisoners were taken in the battle, and 83,000 surrendered the next day, together with 70 mitrailleuses, 400 field-pieces, and 150 fortress guns. About 14,000 French wounded were found lying in the neighbourhood, and about 3000 escaped into Belgium and laid down their arms. Among the killed was lieut -col Pemberton, a correspondent of the *Times*, who had approached too near the conflict.

The French emperor and his suite arrived at Wilhelmshohe, a castle near Cassel appointed for his residence (formerly inhabited by his uncle Jerome, when king of Westphalia), in the evening of 5 Sept.

In a letter dated 12 May, 1872, the emperor Napoleon took upon himself the whole responsibility of the surrender of Sedan

SEDAN CHAIRS (so called from Sedan), were first seen in England in 1581. One used in the reign of James I., by the duke of Buckingham, caused great indignation, and the people exclaimed that he was employing his fellow-creatures to do the service of beasts. Sedan chairs came into London in 1634, when sir Francis Duncomb obtained the sole privilege to use, let, and hire a number of such covered chairs for fourteen years. They came into very general use in 1649.

SEDANGS, a tribe dwelling on the borders of Annam. M. de Mayrena, an ex-officer of the French navy, having made himself their king, came to Paris. He was set aside, and the Sedangs were brought under French protection by the French resident-general in Indo-China; reported Oct. 1889.

Seditious societies were suppressed by act, June, 1797. The Seditious Meetings and Assemblies' bill passed 31 March, 1817. SENATE (*Senatus*). In the ancient republics the government was divided between the *senatus* (from *senis*, old; in Greek, *gerousia*, from *gerōn*, old), an assembly of elders, and the popular assembly (*comitia*, Latin; *ecclesia*, Greek), the king being merely the executive. The Roman senate, said to have originally been composed of 100 members, was raised to 300 by Tarquinius Priscus; to about 600 by Sylla, about 81 B.C.; and to 900 by Julius Cæsar. It was reformed and reduced to 600 by Augustus; and gradually lost its power and dignity under the emperors. The mere form existed in the reign of Justinian. A second senate, formed at Constantinople by Constantine, retained its office till the 9th century. S.P.Q.R. on the Roman standard stood for "Senatus Populusque Romanus," "the Roman senate and people." A *senatus consultum* was a law enacted by the senate.

The French senate was created by the constitution of the year 8, promulgated 24 Dec 1799, to watch over the administration of the laws The number of senators was raised gradually from 60 to 137 The senate was replaced by the chamber of peers in 1814, re-established by Napoleon III 14 Jan 1852, and abolished 5 Sept. 1870 Its re-establishment was proposed in 1873.

SEPTENNIAL PARLIAMENTS. Edward I. held but one parliament every two years. In the 4th Edward III. it was enacted, "that a parliament should be holden every year once." This continued to be the statute-law till 16th Charles I. 1641, when an act was passed for holding parliaments once in three years at least; repealed in 1664. The Triennial act was re-enacted in 1694. Triennial parliaments thence continued till the 2 Geo. I. 1716, when, in consequence of the allegation that "a popish faction were designing to renew the rebellion in this kingdom, and the report of an invasion from abroad," it was enacted that "the then parliament should continue for seven years." This *Septennial act*, entitled "an act for enlarging the continuance of parliaments" (1715 in the statutes, 4to, given as 1 Geo I. stat. 2, c. 38), was passed 7 May, 1716; see *Parliaments*. Several unsuccessful motions have been made for its repeal; one in May, 1837; again 24 Feb. 1880, and 8 April, 1892 (188-142).

SEPTUAGINT VERSION OF THE BIBLE. Lat. *Septuaginta*, "seventy," the Alexandrian and oldest Greek version of the Old Testament. So named from the story of its origin in the letter of Aristeas, "purporting to have been written by a Greek of Alexandria at the time when the event occurred. Aristeas states that Ptolemy Philadelphus, king of Egypt (284-247 B.C.), when engaged in making a collection of the laws of all nations for the great Alexandrine library, was advised by his librarian, Demetrius Phalereus, to have the Jewish Scriptures translated into Greek; how the king sent an embassy to Jerusalem to request the help of the wise men of Israel; how 72 learned Jews, 6 from each tribe, came to Alexandria and were sent to labour in the seclusion of the Island of Pharos; and how in 72 days they dictated to Demetrius a translation of the whole Scriptures," which soon became the authorised Bible of the

Greek-speaking Jews. Although this story is mythical, it is possible that the Septuagint was translated by Egyptian Jews from the Hebrew by command of Ptolemy, probably for the gratification of his own literary curiosity; modern criticism, however, affirms that the Septuagint version is the work not only of different translators, but of different periods, the Pentateuch being first translated, and subsequently the other books. The Septuagint was in use up to the time of Jesus Christ, when it had almost superseded the original Hebrew text. Most of the citations in the New Testament from the Old Testament are taken from the LXX. The principal MSS. of the Septuagint are the Alexandrine codex, in the British Museum; the Vatican codex, in Rome; and the Sinaitic codex, which is defective, in St. Petersburg.

After this capture, preliminaries of peace were signed, and Tippoo agreed to cede one half of Mysore, and to pay 33,000,000 of rupees (about 3,300,000*l.* sterling) to England, and to give up to lord Cornwallis his two eldest sons as hostages.—In a new war the Madras army, under general Harris, arrived before Seringapatam, 5 April, 1799; it was joined by the Bombay army 14 April; and the place was stormed and carried by major-general Baird, 4 May, same year. SEWERS, see *Cloaca Maxima*. An act was passed in 1847 enforcing the conveyance of the sewage of houses in London into the public sewers. The commissioners of sewers in London were superseded by the metropolitan commissioners of sewers, nominated by the government. They abolished the large brick sewers, introducing pipe drains, and turned the contents of 30,000 cesspools into the river Thames. The necessity for purifying the defiled river led to the construction of a new system of drainage, under the superintendence of the Metropolitan Board of Works. The main drainage (the plan of Mr. J. W. Bazalgette) consists of the northern high-level, middle-level, and low-level, and southern high-level and low-level. On 14 March, 1865, the works were said to be completed, except the low-level sewer on the north side, which was waiting for the completion of the Thames embankment, &c. On 4 April, 1865, the prince of Wales (now King) started the engines which commenced lifting the waters of the southern outfall, at Crossness Point, near Erith. The main drainage works of the metropolis (82 miles), were finally completed Aug. 1875. The sewage is carried 14 miles down the river. Total cost, 4,500,000*l*.

Similar inventions are ascribed to Duncan (1804); Adams and Dodge (American, 1818); Thimonnier (French, 1834); and Walter Hunt (1834). The first really practical sewing-machine was the invention of Elias Howe, an American mechanic, of Cambridge, in Massachusetts, about 1841, who died at Brooklyn, 2 Oct. 1867, aged 47. It is now known under an improved form as Thomas's shuttle machine, by whom it was introduced into England in 1846. Many improvements have been since made and new machines invented.

Shakspeare's first plays were probably produced about 1590, and soon after represented, himself frequently taking a part at the "Theatre," or the "Curtain," near Shoreditch, E. London, and after 1594, at the new "Globe" theatre, Bankside, Southwark, of which Shakspeare himself was part proprietor It was of a horse-shoe form, partly covered with thatch After it was licensed, the thatch took fire, through the negligent discharge of a piece of ordnance, and the whole building was consumed, 29 June, 1613 The house was crowded to excess, to witness the play of *Henry VIII*, but the audience escaped unhurt.

SHAKSPEARE'S JUBILEE, projected by David Garrick, was celebrated at Stratford-upon-Avon, 6-8 Sept. 1769 A similar festival was kept 23 April, 1836 The *tercentenary* of Shakspeare's birth was celebrated, with many festivities, at Stratford-upon-Avon, 23-29 April, 1864.

SHAKSPEARE'S HOUSE. In 1847, a number of persons of distinction interested themselves for the preservation of the house in which Shakspeare was born, then actually put up for sale: they held a meeting at the Thatched-house tavern, London, 26 Aug in that year, and took measures for promoting a subscription set on foot by the Shakspearian Club at Stratford-upon-Avon; and a committee was appointed to carry out their object. In the end Shakspeare's house was sold at the Auction Mart in the city of London, where it was "knocked down" to the United Committee of London and Stratford for the large sum. of 3,000*l.* 16 Sept 1847 In 1896, a learned oriental scholar, John Shakspeare (no relation of the poet), gave 2,500*l.* to purchase the adjoining house, that it might be pulled down, in order to ensure the poet's house from the risk of fire.

* In 1849, Mr. J. P. Collier, editor of an edition of Shakspeare, purchased a copy of the second folio, on which was written in pencil a number of corrections, supposed to have been made soon after publication. At first he thought little of these marks; but in 1853 he was induced to publish "Notes and Emendations" derived from this volume. Much controversy ensued as to the authenticity of these corrections; and in 1859 it was generally agreed that they were of modern date, and so of little value. SHERBORNE PAGEANT. A pageant on a large scale to commemorate the 1,200th anniversary of the foundation of Sherborne town, bishopric, and school. The principal features were the performance, in the grounds of Sherborne castle, of the historical pageant, written for the occasion by Mr. Louis N. Parker, the various scenes illustrating the history of the town, see, and school between their foundation in 705 A.D. by St. Ealdhelm, first bishop of Sherborne, and the arrival of sir Walter Raleigh and his bride The pageant opened 12 June, 1905.

SHERIFF, or *shire-reeve*, governor of a shire or county. London had its sheriffs prior to William I.'s reign, but some say that sheriffs were first nominated for every county in England by William in 1079. According to other historians, Henry Cornhill and Richard Reynere were the first sheriffs of London, 1 Rich. I., 1189. The nomination of sheriffs, according to the present mode, took place in 1461. *Stow.* Anciently sheriffs were hereditary in Scotland, and in some English counties, as Westmoreland. The sheriffs of Dublin (first called bailiffs) were appointed in 1308, and obtained the name of sheriff by an incorporation of Edward VI. 1548. Thirty-five sheriffs were fined, and eleven excused in one year, rather than serve the office for London, 1734; see *Bailiffs.* The high sheriffs of the counties of England and Wales, except Middlesex and Lancaster, are nominated on the morrow of St. Martin, Nov. 12. This somewhat vice-regal office, of Saxon origin, has gradually lost much of its importance.

The sheriffs' act passed 1887

SHILLING. The value of the ancient Saxon coin of this name was fivepence, but it was reduced to fourpence about a century before the conquest. After the conquest the French *solidus* of twelve pence, in use among the Normans, was called *shilling.* The true English shilling was first coined, some say, in small numbers, by Henry VII., 1504. *Ruding.* A peculiar shilling, value nine pence, but to be current at twelve, was struck in Ireland, 1560; and a large but very base coinage in England for the service of Ireland, 1598. Milled shillings were coined 13 Chas. II. 1662; see *Coins.*

SHIP-BUILDING, &c., according to the Greek legends, began with the Egyptians, and ancient drawings of their rude vessels are extant. The Greeks, Phœnicians, and Carthaginians were skilful shipbuilders, and Solomon's "navy of ships" (1 *Kings* ix. 26), was doubtless constructed by Tyrians, 992 B.C. The ships of Tarshish (probably in Spain), are mentioned in *Psalm* xlviii. 7, *Isaiah* II. 16, &c. The Romans built their first fleet of boats, by copying a Carthaginian vessel wrecked on their coast, 260 B.C. The dangers of navigation are described in *Psalm* cvii. 23-30 and *Acts* xxvii. Strong vessels were constructed by the Norsemen for invasion and piracy in the 5th century A.D. *et seq.*, and by the Venetians and other Italians, for commerce and war in the Middle Ages. The first double-decked ship built in England was of 1000 tons burthen, by order of Henry VII., was called the *Great Harry*, and cost 14,000*l.* *Stow.* Port-holes and other improvements were invented by Descharges, a French builder at Brest, in the reign of Louis XII, about 1500. Ship-building was treated as a science by Hoste, 1696. In the second half of the 19th century great progress was made in ship-building. Wood gave place to iron and steel, and only small vessels are now constructed of wood alone.

SHIPKA, see *Schipka*.

SHIP-MONEY was first levied about 1007, to form a navy to oppose the Danes. This impost, levied by Charles I. in 1634-6, was much opposed, and led to the revolution. He assessed London in seven ships, of 4000 tons, and 1560 men; Yorkshire in two ships, of 600 tons or 12,000*l.*; Bristol in one ship of 100 tons; Lancashire in one ship, of 400 tons. Among others, John Hampden refused to pay the tax; he was tried in the Exchequer in 1636. The judges declared the tax legal, 12 June, 1637. Ship-money was included in the grievances complained of in 1641. The five judges, who had given an opinion in its favour, were imprisoned. Hampden received a wound in a skirmish with prince Rupert, at Chalgrove, 18 June, and died 24 June, 1643.

SHIPPING, BRITISH. Shipping was first registered in the river Thames in 1786; and throughout the empire in 1787. SHIPWRECKS, see *Wrecks*.

SHIRES, see *Counties* and under *Horse*.

SHIRTS are said to have been first generally worn in the west of Europe early in the 8th century. *Du Fresnoy*. Woollen shirts were commonly worn in England until about 1253, when linen, but of a coarse kind (fine coming at this period from abroad), was first manufactured in England by Flemish artisans. *Stow*.

SHODDY, a kind of soft woollen goods, manufactured from old woollen rags, or the refuse, to which new wool is added, is stated to have been first manufactured about 1813, at Batley, near Dewsbury, Yorkshire.

SHOEBLACK SOCIETY Brigades (Blue, Red, and Yellow) were established at various times, especially in 1850, by Mr. John MacGregor, "Rob Roy," in connection with the Ragged School Union.

Some ground here, purchased in 1842 and 1855, by an act of parliament in 1862 was set apart as "ranges for the use and practice of artillery," and a school for gunnery was established; see *Cannon*, note. Experiments with Mr. Whitworth's projectiles on 12 Nov. 1862, showed their great improvement in form and material. Shells were sent through 5½ inch plate and the wood-work behind it. It was objected, that they might not do this with ships in motion. The National Volunteer Artillery Association began their annual meetings here in July, 1865.

During shell experiments with a new sensitive fuse, col. Francis Lyon (the inventor), col. Fox-Strangways, capt. Francis M. Goold-Adams, and four others were killed, 26 Feb. 1885.

SHOES, among the Jews were made of leather, linen, rush, or wood. Moons were worn as ornaments in their shoes by Jewish women. *Isaiah* iii. 18. Pythagoras would have his disciples wear shoes made of the bark of trees; probably that they might not wear what were made of the skins of animals, as they refrained from the use of everything that had life. The Romans wore an ivory crescent on their shoes; and Caligula enriched his with precious stones. In England, about 1462, the people wore the beaks or points of their shoes so long that they encumbered themselves in walking, and were forced to tie them up to their knees; the fine gentlemen fastened theirs with chains of silver or silver gilt, and others with laces. This was prohibited, on the forfeiture of 20*s*. and on pain of being cursed by the clergy, 7 Edw. IV. 1467; see *Dress*. Shoes, as at present worn, were introduced about 1633. The buckle was not used till 1668. *Stow; Mortimer*. The buckle-makers petitioned against the use of *shoe-strings* in 1791. Since then chain, grape, and canister shot have been invented, as well as shells of many kinds; see *Bombs* and *Cannon*. For Palliser's chilled shot, see *Cannon*.

SIBYLS, Sibyllæ, women believed to be inspired, who flourished in different parts of the world. Plato speaks of one, others of two, Pliny of three, Ælian of four, and Varro of ten. An Erythrean sibyl is said to have offered to Tarquin II nine books containing the Roman destinies, demanding for them 300 pieces of gold. He denied her; whereupon the sibyl threw three of them into the fire, and asked the same price for the other six, which being still denied, she burnt three more, and again demanded the same sum for those that remained, when Tarquin conferring with the pontiffs was advised to buy them. Two magistrates were created to consult them on all occasions, 531 B.C.; see *Quindecemvirs*.

SICILIAN VESPERS, the term given to the massacre of the French (who had conquered Sicily, 1266), commenced at Palermo, 30 March, 1282.

On Easter Monday conspirators assembled at Palermo, and while the French were engaged in festivities, a Sicilian bride passed by with her train. One Drochet, a Frenchman, used her rudely, under pretence of searching for arms. A young Sicilian stabbed him with his own sword; and a tumult ensuing, 200 French were instantly murdered. The populace ran through the city, crying out, "Let the French die!" and, without distinction of rank, age, or sex, slaughtered all of that nation they could find, to the number of about 8000. Even the churches proved no sanctuary, and the massacre became general throughout the island.

SILISTRIA, a strong military town in Bulgaria, European Turkey. It was taken by the Russians, 30 June, 1829, and held some years by them as a pledge for the payment of a large sum by the Porte; but was eventually returned. In 1854 it was again besieged by the Russians, 30,000 strong, under prince Paskiewitch, and many assaults were made On 2 June, Mussa Pacha, the brave and skilful commander of the garrison, was killed. On 9 June, the Russians stormed two forts, which were retaken. A grand assault took place on 13 June, under prince Gortschakoff and general Schilders, which was vigorously repelled. On the 15th, the garrison assumed the offensive, crossed the river, defeated the Russians, and destroyed the siege works. The siege was thus raised, and the Russians commenced their retreat as Omar Pacha was drawing near. The garrison was ably assisted by two British officers, capt. Butler and lieut. Nasmyth, the former of whom, after being wounded, died of exhaustion. They were highly praised by Omar Pacha and lord Hardinge, and lieutenant Nasmyth was made a major. SILK. The culture of the silkworm and the manufacture of silk is attributed to the Chinese. Ptolemy called the northern part of China (afterwards known as *Cathay*) *Seres* ("the people who furnish silk"), from the Chinese name for the silkworm *sze* or *see*, from which is derived the Greek word *sēr*, "silkworm." A Chinese work, called the "Silkworm Classic," states that Seling-she, the principal queen of the Emperor Hwang-te (2640 B.C.), was the first person to rear silkworms, and that the emperor invented robes and garments of silk. The Chinese themselves assign a still higher antiquity to the culture of the silkworm. Silkworms were introduced into Europe (552) by two Persian monks, who brought them from China to Constantinople; and their culture was encouraged by the Roman emperor Justinian. Wrought silk was brought from Persia to Greece, 325 B.C. Known at Rome in Tiberius's time, when a law passed in the senate prohibiting the use of plate of massive gold, and also forbidding men to debase themselves by wearing silk, fit only for women. Silk was at first of the same value with gold, weight for weight, and was thought to grow in the same manner as cotton on trees. Silkworms were brought from India to Europe in the 6th century. Charlemagne sent Offa, king of

Mæsia, a present of two silken vests, 780. The manufacture was encouraged by Roger, king of Sicily, at Palermo, 1146, when the Sicilians not only bred the silkworms, but spun and wove the silk. The manufacture spread into Italy and Spain, and also into the south of France, a little before the reign of Francis I. about 1510; and Henry IV. propagated mulberry-trees and silkworms throughout the kingdom, about 1600. In England, silk mantles were worn by some noblemen's ladies at a ball at Kenilworth castle, 1286. Silk was worn by the English clergy in 1534. Manufactured in England in 1604; and broad silk wove from raw silk in 1620. Brought to perfection by the French refugees in London at Spitalfields, 1688. A silk-throwing mill was made in England, and fixed up at Derby, by sir Thomas Lombe, merchant of London, modelled from the original mill then in the king of Sardinia's dominions, about 1714. He obtained a patent in 1718, and died 3 Jan. 1739. Six new species of silkworm were rearing in France, 1861.* In 1857 Mr. Lister (lord Masham 1891) discovered a useful method of spinning native chassum, or Indian silk-waste; since then many important improvements in dressing and spinning waste silk have been discovered.

Silkworm Disease. In 1853 the annual produce of sericulture in South France was estimated at about 4,680,000*l.* Soon after a disease broke out in the worms, which reduced the value of the silk crop to about one-third that amount. In 1858 a commission was appointed to inquire into the nature of the disease, then termed *pébrine;* and M Quatrefages, in 1869, proved that it is hereditary, contagious, and infectious. M. Filippi discovered in the blood of the diseased worms a multitude of cylindrical corpuscles, since named *panhistophyton*, which Pasteur, who took up the study in 1865, demonstrated to be parasitical, and the cause of the disease. He subsequently devised a way by which the organic germs may be got rid of and the disease extirpated.

The manufacture of a fabric from wood pulp, invented by count Hilaire de Chardonnet about 1893, and carried on at Besançon, reported very successful; dress and other fabrics of this material sold in London, summer of 1896.

World's production of raw silk in 1904 amounted to 19,368,000 kilograms (about 42,610,000 lbs.); estimated production for 1905-6, 40,100,000 lbs.

SILURES, a British tribe, occupying the counties of Monmouth and Hereford, was subdued by the Roman general Ostorius Scapula, 50; see *Shropshire*. From this tribe is derived the geological term "Silurian strata," among the lowest of the palæozoic or primary series, from their occurrence in the above-mentioned counties. *Murchison's "Siluria"* was published 1849.

SILVER exists in most parts of the world, and is found mixed with other ores in various mines in Great Britain. The silver mines of South America were at one time the richest in the world, but the mines discovered in the United States of North America in 1858 *et seq.* far exceeded them in richness. Silver was discovered in the State of Nevada in 1858, and subsequently in most of the Pacific States and territories, viz., Colorado, Utah, Montana, and Arizona, the greatest producer being Colorado, next being Nevada. The most celebrated mines in the United States are the Comstock lode, Washoe county, West Nevada (formerly part of the territory of Utah), and the Eureka and Richmond mines, Nevada. The Comstock lode was discovered in 1859, and in 20 years had produced silver and gold valued at 325,000,000 dollars. Then its galleries and shafts were 250 miles in length. Round this lode grew up Virginia City. A mine was discovered in the district of La Paz in 1660, which was so rich that the silver of it was often cut out with a chisel. In 1749, one mass of silver weighing 370 lbs. was sent to Spain. From a mine in Norway, a piece of silver was dug, and sent to the Royal Museum at Copenhagen, weighing 560 lbs., and worth 1,680*l.* In England silver plate and vessels were first used by Wilfrid, a Northumbrian bishop, a lofty and ambitious man, 709. *Tyrrell.* Silver knives, spoons, and cups were great luxuries in 1300; see *Mirrors*. The act of 1816 restricted the use of silver as legal tender to 40*s.* In 1855, 561,906 oz., in 1857, 532,866 oz., in 1865, 724,856 oz., in 1870, 784,562 oz.; in 1876, 483,422 oz.; in 1882, 372,544 oz.; in 1887, 320,345 oz.; in 1888, 321,425 oz.; in 1889, 306,149 oz.; in 1890, 291,724 oz.; 1893, 274,100 oz.; 1896, 283,826 oz.; 1899, 191,927 oz.; 1900, 187,842 oz; 1901, 173,724 oz. were obtained from mines in Britain. Estimated annual production of silver throughout the world, 1477 tons; value, 37,360,000*l.* (1892). Pattinson's process for obtaining silver from lead ore was introduced in 1829. * In 1858, M. Guérin-Méneville introduced into France a Chinese worm termed the *Cynthia Bombyx*, which feeds on the *Ailanthus glandulosa*, a hardy tree of the oak kind. The cynthia yields a silk-like substance termed *Ailantine*. It was brought to Turin by Fantoni in 1856.

social reformers called ST. SIMONIANS, after their founder, Claude H. comte de St. Simon (born 1760), sprang up in France in 1819, and attracted considerable attention; the doctrines were advocated in England, particularly by Dr. Prati, who lectured upon them in London, 24 Jan. 1834. St. Simon died in 1825, and his follower, Père Enfantin, died 1 Sept. 1864.

SIMONY (trading in church offices) derives its name from Simon desiring to purchase the gift of the Holy Spirit (*Acts* viii. 18, 19). It is forbidden in England by the canon law, and by statute 31 Eliz. c. 6, "for the avoiding of simony and corruption in presentations, collations, and donations of and to benefices," &c., 1588-9; and by statute of 12 Anne 2, stat. 12 (1713). The rev. James John Mercer was convicted of simony, 26-29 Nov. 1869, and deprived.

The bishop of Peterborough (Dr. Magee) moved for a committee on the laws relating to simony: appointed . . . . . 21 April, 1874

SIMPLON, a mountain road, leading from Switzerland into Italy, constructed by Napoleon in 1801-7. It winds up passes, crosses cataracts, and passes by galleries through solid rock, and has eight principal bridges. The number of workmen employed at one time varied from 30,000 to 40,000. The new Simplon tunnel boring operations began 13 Nov. 1898; Herr Brandt, the chief engineer, died, Nov. 1899. The piercing of the tunnel completed 24 Feb. 1905. The new tunnel, which is 21,576 yards, or a little over 12¼ miles in length is the largest in the world. It is almost straight from end to end, from Brigue, in Switzerland, to Iselle, in Italy. The portion finished is one of the two tunnels; the second, partially made, will remain in its rough state until the earnings of the first amount to 2.000f. per kilometre. The finished tunnel is egg-shaped, about 6 yards high and 4½ broad. The distance apart of the two tunnels is about 50 yards. The frontier line passes almost exactly in the middle of the tunnel. The average height of the mountain above the tunnel is 3,470 ft., the highest point, situated on the Italo-Swiss frontier, being 7,004 ft. above the level of the tunnel. The original cost of the tunnel was estimated at 2,800,000*l.*, but in view of the enormous difficulties encountered, the price was raised to 3,140,000*l.* The new tunnel shortens the journey between Calais and Milan most materially. The distance by the Mont Cenis Tunnel is 680 miles, and by the St. Gotthard Tunnel 665 miles, whereas by the Simplon Tunnel it is reduced to 585 miles.

SINKING FUND. First projected by sir Robert Walpole to redeem the debt to the bank of England; act passed in 1716. The act establishing the sinking fund of Mr. Pitt, devised by Dr. Price, was passed in March, 1786. A then estimated surplus of 900,000*l.* in the revenue was augmented by new taxes to make up the sum of 1,000,000*l.* which was to be invariably applied to the reduction of the national debt. The fallacy of the scheme was shown by Dr. Hamilton in 1813. In July, 1828, the sinking fund was limited to one-fourth of the actual surplus of revenue.

A new sinking fund was established by act passed 2 Aug 1875 The annual charge of the national debt of the year ending 31 March, 1877, to be 27,700,000*l.*; subsequent years to be 28,000,000*l.* This act was temporarily suspended in 1897; again during the S. African war in 1900 and 1901, restored 1902.

SINOPE, an important Greek colony on the Euxine, after resisting several attacks was conquered by Mithridates IV., king of Pontus, and made his capital. It was the birth-place of Diogenes, the cynic philosopher. On 30 Nov. 1853, a Turkish fleet of seven frigates, three corvettes, and two smaller vessels, was attacked by a Russian fleet of six sail of the line, two sailing vessels, and three steamers, under admiral Nachimoff, and totally destroyed, except one vessel, which conveyed the tidings to Constantinople. Four thousand lives were lost by fire or drowning, and Osman Pacha, the Turkish admiral, died at Sebastopol of his wounds. In consequence of this act (considered treacherous) the Anglo-French fleet entered the Black Sea, 3 Jan. 1854.

SION COLLEGE AND HOSPITAL, situated on the site of a nunnery, which, having fallen to decay, was purchased by William Elsynge, a citizen and mercer, and converted into a college and hospital, called from his name Elsynge Spital. In 1623, Dr. Thomas White having bequeathed 3000*l.* towards purchasing and building a college and almshouse on the ancient site, his executors erected the present college. It is held by two charters of incorporation, 6 Chas. I. 1630 and 16 Chas. II. 1664. It contains a valuable library (easily accessible to the public), and an almshouse for ten men and ten women. SLAVERY. The traffic in men came from Chaldæa into Egypt, Arabia, and all over the East. In Greece, in the time of Homer, all prisoners of war were treated as slaves. The Lacedæmonian youths, trained up in the practice of deceiving and butchering slaves, were from time to time let loose upon them to show their proficiency; and once, for amusement only, murdered, it is said, 3,000 in one night, see *Helots*. Alexander, when he razed Thebes, sold the whole people for slaves, 335 B.C. There were 400,000 slaves in Attica, 317 B.C. In Rome slaves were often chained to the gate of a great man's house, to give admittance to the guests invited to the feast. By one of the laws of the XII. Tables, creditors could seize their insolvent debtors, and keep them in their houses, till by their services or labour they had discharged the sum they owed. Cæcilius Isidorus left to his heir 4,116 slaves, 12 B.C. The first Janissaries were Christian slaves, 1329.

SLAVERY IN ENGLAND. Laws respecting the sale of slaves were made by Alfred. The English peasantry were commonly sold for slaves in Saxon and Norman times; children were sold in Bristol market like cattle for exportation. Many were sent to Ireland and to Scotland. Under the Normans the vassals (termed villeins, of and pertaining to the *vill*) were devisable as chattels during the feudal times.

Severe statutes were passed in the reign of Richard II., 1377 and 1385: the rebellion of Wat Tyler, 1381, arose partly out of the evils of serfdom.
A statute was enacted by Edward VI. that a runaway, or any one who lived idly for three days, should be brought before two justices of the peace, and marked V with a hot iron on the breast, and adjudged the slave of him who bought him for two years. He was to take the slave and give him bread, water, or small drink, and refuse meat, and cause him to work by beating, chaining, or otherwise; and, if within that space, he absented himself fourteen days, was to be marked on the forehead or cheek, by a hot iron, with an S, and be his master's slave for ever; second desertion was made felony. It was lawful to put a ring of iron round his neck, arm, or leg. A child might be put apprentice, and, on running away, become a slave to his master 1547
Queen Elizabeth ordered her bondsmen in the western counties to be made free at easy rates . 1574
Serfdom was finally extinguished in 1660, when tenures in capite, knights' service, *&c.*, were abolished.
A slave named Somerset, brought to England, was, because of his ill state, turned adrift by his master. By the charity of Mr. Granville Sharp he was restored to health, when his master again claimed him. SLAVE TRADE. The slave trade from Congou and Angola was begun by the Portuguese in 1481. From then the commerce in man brutalised a tract fifteen degrees on each side of the equator, and forty degrees wide, or of 4,000,000 of square miles; and men and women were bred for sale to the Christian nations, and war carried on to make prisoners for the Christian market. The Abbé Raynal computed (1777) that, at the time of his writing, 9,000,000 of slaves had been consumed by the Europeans. The slave-trade is now approaching extinction.
In 1768 the slaves taken from Africa amounted to 104,100. In 1786 the annual number was about 100,000.
In 1807 it was shown by documents, produced by government, that since 1792 upwards of 3,500,000 Africans had been torn from their country, and had either perished on the passage or been sold in the West Indies.

SLAVONIA or SCLAVONIA, a province of Austria, derives its name from the Slavs, a Sarmatian people who replaced the Avars in Pannonia early in the 9th century. In 864 Cyril and Methodius, Greek missionaries, preached here, and adapted the Greek alphabet to the Slavonian language; the letters of which have since been a little altered. The country, after having been held at times by the Greeks, Turks, and Hungarians, and the cause of sanguinary conflicts, was ceded finally to Hungary in 1699, at the peace of Carlowitz. Deputies from the Slavonian provinces of Austria were entertained at Moscow and St. Petersburg, May, 1867. The Croatian-Slavonian diet, at Agram, was dissolved, May, 1867. It protested against incorporation with Hungary. The Slavonian family of languages includes Russian, Polish, Servian, Bohemian, Bulgarian, Wendic, Slovak, and Polabic. SMALLPOX, *variola* (diminutive of *varus*, a pimple), a highly contagious disease, supposed to have been introduced into Europe from the East by the Saracens. Rhazes, an Arabian, described it accurately, about 900. From Europe it was carried to America, soon after its discovery, and raged there with great severity, destroying the Indians by thousands. In 1694, queen Mary of England died of smallpox, as did in 1711 and 1712 the emperor of Germany, the dauphin and dauphiness of France and their son, in 1730 the emperor of Russia, in 1741 the queen of Sweden, and in 1774 Louis XV. of France. It is stated that in the middle of the 18th century two millions perished by it in Russia. In London in 1723 one out of fourteen deaths was caused by smallpox, and in France in 1754 the rate was one in ten. For the attempts to alleviate this scourge, see *Inoculation*, introduced into England in 1722, and *Vaccination*, announced by Dr. Jenner in 1798. *Smallpox Hospital*, established 1746. Smallpox raged in parts of London, and thousands died, 1870-1; a temporary hospital was established at Hampstead (*which see*). The space devoted to this purpose was enlarged from about three acres to four and a half, and in 1834 to six and a quarter. The ancient regulations were called the "statutes of Smithfield." In one day there were sometimes assembled 4,000 beasts and 30,000 sheep. The annual amount of the sales was about 7,000,000*l.*

Sold here 226,132 beasts, 1,593,270 sheep and lambs, 26,356 calves, 33,531 pigs. (About 160 salesmen) 1846
The contracted space of the market, the slaughtering places adjoining, and many other nuisances, gave ground to much dissatisfaction, and after investigation, an act was passed appointing metropolitan market commissioners with powers to provide a new market, slaughtering places, &c; and to close the market at Smithfield . 1 Aug. 1851

The show, suspended in Dec 1866, on account of the cattle plague, was partially resumed Dec 1867, wholly, Dec 1868. Annually in December since.

SMITHSONIAN INSTITUTION, "for the increase and diffusion of knowledge among men," a handsome building at Washington, U.S., was founded in 1846, by means of a legacy of above 100,000*l.* bequeathed for the purpose to the United States government by James Smithson, illegitimate son of sir Hugh Smithson, who became duke of Northumberland in 1766. It includes the U.S.

national museum, the zoological park, and the astrophysical observatory, and publishes and freely distributes scientific memoirs and reports. The library was burnt on 25 Jan. 1865. In 1856 another act, obtained for its further application to steamers below London bridge, and to potteries and glass-houses previously exempted, came into operation, 1 Jan. 1858; enactments have been made for all the kingdom.

SMOLENSKO (Russia). The French in most sanguinary engagements here were three times repulsed, but ultimately succeeded in entering Smolensko, and found the city, which had been bombarded, burning and partly in ruins, 16, 17 Aug. 1812. Barclay de Tolly, the Russian commander-in-chief, incurred the displeasure of the emperor Alexander because he retreated after the battle, and Kutusoff succeeded to the command.

SMUGGLING. The customs duties, instituted to enable the king to afford protection to trade against pirates, afterwards became a branch of public revenue, and gave rise to much smuggling. The Smugglers' act was passed in 1736, and its severity was mitigated in 1781 and 1784. A revision of these statutes took place 1826 and 1835. Lieut. the hon. H. N. Shore's "Smuggling Days and Smuggling Ways," published 1892.

SNEEZING. The custom of saying "God bless you" to the sneezer originated, according to Strada, among the ancients, who, through an opinion of the danger attending it, after sneezing made a short prayer to the gods, as "Jupiter, help me." The custom is mentioned by Homer, the Jewish rabbis, and others, and is found among savages. Polydore Vergil says it took its rise at the time of the plague, 558, when the infected fell down dead sneezing, though seemingly in good health.

No. 13, Lincoln's-inn-fields, was gradually formed by sir John Soane, the architect, who died in 1837, after making arrangements for its being open to the public by an act passed in 1833. SOAP is a salt, a compound of a fatty acid with an alkali, soda or potash. The Hebrew *bôrîth,* translated soap, is merely a general term for cleansing substances. *Job* ix. 30; *Jer.* ii. 22. Pliny declares soap to be an invention of the Gauls, though he prefers the German to the Gallic soap. Nausicaa and her attendants, Homer tells us, washed clothes by treading upon them with their feet in pits of water. *Odyssey,* book vi. The Romans used fuller's earth. *Savon,* the French word for soap, is ascribed to its having been manufactured at Savona, near Genoa. The manufacture of soap began in London in 1524, before which time it was supplied by Bristol at one penny per pound. The duty upon soap, imposed in 1711, after several reductions from 3*d.* per pound, was totally repealed in 1853. It then produced, according to the chancellor of the exchequer, Mr. Gladstone, about 1,126,000*l.* annually. Exported from the United Kingdom: 1876, 254,853 cwts.; 1880, 391,808 cwts.; 1885, 402,112 cwts.; 1890, 496,930 cwts.; 1900, 874,214 cwts.; 1904, 1,208,712 cwts.

SOBRAON (N.W. India). The British army, 35,000 strong, under sir Hugh (afterwards viscount) Gough, attacked the Sikh force on the Sutlej, 10 Feb. 1846. The enemy was dislodged after a dreadful contest, and all their batteries taken; and in attempting the passage of the river by a floating bridge in their rear, the weight of the masses that crowded upon it caused it to break down, and thousands of Sikhs were killed, wounded, or drowned. The British loss was 2,338 men.

SOCIALISM, which proposes the re-organisation of society for the benefit of the community, and advocates the doctrine of the equal right of all to the material conditions of existence, was warmly advocated in London, 24 Jan. 1834, by Robert Owen. He had, beginning at New Lanark, in Scotland, about 1801, established a settlement at New Harmony in America in 1824. He died 17 Nov. 1858, aged 90. The French socialists, termed *Communists,*

became a powerful political body in that country, were implicated in the revolution of 1848, and made an insurrection at Paris, 1871. See *France, Germany*, 1878 *et seq.*, *Positive Philosophy*, and *Working-men* See *Individualism*. Socialism in England is represented by the Social Democratic federation, the Fabian society, and the Independent Labour party, and in a modified form, by the Christian Social union; in Germany by the Social Democrats; in France by the Workmen's party and the Republican socialists. Socialism is also active in Austria, Italy, Belgium, Denmark.

SOCIAL SCIENCE. The National Association for the Promotion of Social Science originated in a meeting at lord Brougham's in May, 1857. Its object was to promote improvements in the administration of law, in education, in public health, and in social economy. It held annual meetings, and published its proceedings. Mr. Wm. Ellis and Mr. John Stuart Mill began to promote the study about 1823. The last congress was held at Birmingham on Sept. 17, 1884.

SOCIETY ISLANDS, Pacific Ocean, discovered by De Quiros in 1606; re-discovered by capt. Wallis, 1767, who gave Otaheite or Tahiti the name of King George's Island. Capt. The Rakovian catechism was published in 1574; see *Unitarians*.

SODIUM, a remarkable metal, first obtained in 1807 by sir Humphry Davy, from soda (which was formerly confounded with potash, but proved to be a distinct substance by Duhamel in 1736). This metal, like potassium, was obtained by the agency of the electric battery. In consequence of Deville's improved processes, sodium manufactured by Bell Brothers, of Newcastle, at 10s. a pound (1868). It is an important agent in the modern production of aluminium. Common salt (chloride of sodium) is a compound of sodium and chlorine. Mr. H. Y. Castner's (of New York) new process for the enlarged production of sodium, and through sodium of aluminium and magnesium, announced in June, 1887. His works were set up at Oldbury, near Birmingham; he died Oct. 1899. See *Alkalies* and *Aluminium*.

Several councils have been held at Soissons (in 744, 1092, 1122). Its academy was established in 1674. During the Franco-Prussian war, Soissons, after three weeks' investment and four days' bombardment, surrendered to the Germans under the grand-duke of Mecklenburg, 16 Oct. 1870. 99 officers, 4,633 men, 128 guns, &c., were said to be taken.

He placed the sun in the centre, and all the planets moving in elliptical orbits round it—a doctrine superseded by the Ptolemaic system (*which see*). SOLFERINO (in Lombardy), the site of the chief struggle on the great battle of 24 June, 1859, between the allied French and Sardinian army commanded by their respective sovereigns, and the Austrians under general Hess; the emperor being present. The Austrians, after their defeat at Magenta, gradually retreated across the Mincio, and took up a position in the celebrated quadrilateral, and were expected there to await the attack. But the advance of Garibaldi on one side, and of prince Napoleon and the Tuscans on the other, induced them to recross the Mincio and take the offensive, on 23 June. The conflict began early on the 24th, and lasted fifteen hours. At first the Austrians had the advantage; but the successful attack of the French on Cavriana and Solferino changed the fortune of the day, and the Austrians, after desperate encounters, were compelled to retreat. The French attribute the victory to the skill and bravery of their emperor and the generals MacMahon and Niel; the Austrians, to the destruction of their reserve by the rifled cannon of their adversaries. The Sardinians maintained a fearful contest of fifteen hours at San Martino, it is said against double their number. Loss of the Austrians, 630 officers, and 19,311 soldiers; of the allies, 8 generals, 936 officers, and 17,305 soldiers killed and wounded. This battle closed the war; preliminaries of peace being signed at Villa Franca,

12 July. On 24 June, 1870, on the site of the battle, three ossuaries, containing the bones of thousands of the slain, were consecrated in the presence of representatives of Austria, France, and Italy. The Ossuary tower inaugurated, and a colossal statue of king Victor-Emmanuel, unveiled by king Humbert, 15 Oct. 1893.

SOMERSET-HOUSE (London), formerly a palace, founded on the site of several churches and other buildings levelled in 1549, by the protector Somerset, whose residence fell to the crown after his execution, 22 Jan. 1552. Here resided at times queen Elizabeth, Anne of Denmark, and Catherine, queen of Charles II. Old Somerset-house, a mixture of Grecian and Gothic, was demolished in 1775, and the present edifice, from a design by sir William Chambers, was erected for public offices. The Royal Academy of Arts first assembled in the apartments given to the members by the king, 17 Jan. 1771. The Royal Society met here, 1780-1857; and apartments here were also held by the Society of Antiquaries and the Geological Society; all three now at Burlington House. Large suites of government buildings were erected in 1774. The Navy-office, Pipe-office, Victualling and other offices, were removed herein 1788, and various government departments since. The east wing forming the King's College (see *King's College*) was completed in 1833. By an act passed in 1854, the offices of the duchy of Cornwall were transferred to Pimlico.

When that city was taken by general Nott, 6 Sept. 1842, lord Ellenborough ordered the gates to be restored after an exile of 800 years, and issued a proclamation much censured at the time. SOUND, see *Acoustics*.

SOUND DUTIES. Till the year 1857 no merchant ship was allowed to pass the Sound (a

narrow channel separating Zealand from Sweden) without clearing at Elsinore and paying toll. These duties had their origin in an agreement between the king of Denmark and the Hanse towns (1348), by which the former undertook to maintain lighthouses, &c., along the Cattegat, and the latter to pay duty for the same. The first treaty with England in relation to this was in 1450; other countries followed. In 1855 the United States determined to pay the dues no more; and in the same year the Danish government proposed that these dues should be capitalised; which was eventually agreed to, the sum being 30,476,325 rix-dollars. In Aug. 1857, the British government paid 10,126,855 rix-dollars (1,125,206*l.*) to the Danes as their proportion.—The passage of the Sound was effected, in defiance of strong fortresses, by sir Hyde Parker and lord Nelson, 31 March, 1801; see *Baltic Expedition*.

SOUNDINGS AT SEA. Captain Ross, of H.M.S. *Œdipus*, in 1840, took extraordinary soundings at sea. In the latitude 33° S. and longitude 9° W. about 300 miles from the Cape of Good Hope, 2,266 fathoms were sounded; the weight employed amounted to 450 lbs. On 13 July, 1857, lieut. Joseph Dayman, in the North Atlantic Ocean, lat. 51° 9′ N., long. 40° 2′ W., in sounding, found a bottom at 2,424 fathoms. The deepest sounding known (3,875 faths.) was taken by the *Challenger*, capt. Nares, 24 March, 1873, in the North Atlantic, north of St. Thomas's. See *Deep Sea Soundings*.

Royal commission of inquiry into the conduct of the war up to the occupation of Pretoria; adm. sir John Hopkins, sir Henry Norman, sir George Goldie, lord Elgin, chairman, and others; holds many meetings, 7 Oct. *et seq.* 1902; sittings resumed . . . . . 7 Feb. "

Report of the Royal Commission.—The Commission reports adversely on the military preparations; the deficiencies in stores and *matériel* disclosing "a condition of affairs justly described by lord Lansdowne in his minute of 21 May, 1900, as 'full of peril to the empire,' inasmuch as 'we were not sufficiently prepared even for the equipment of the comparatively small force which we had always contemplated might be employed beyond the limits of this country in the initial stages of a campaign.'" Various deficiencies are mentioned, as the fact that out of 151,000,000 rounds of small arms ammunition (Mark IV.) in stock at the beginning of the war 66,000,000 rounds were unavailable; at the end of 1899 it was discovered that 200,000 reserve rifles in stock, 25,000 of which had been issued, were so badly sighted as to shoot 18 in. to the left at a range of 500 yds.; none of the complete kits of clothing in stock for 82,000 reservists could be used, except greatcoats, because they were red and blue clothing unsuitable for Africa or indeed for most countries where the British army is likely to see fighting. The various deficiencies are enumerated in detail; complaints of a similar nature were made as to swords, ammunition pouches, and entrenching implements, the supply of officers and men, and their training, the equipment of the army medical *personnel* and establishment; the lack before the war of cohesion and co-ordinated action among the different departments of the war office, and the want at the war office of a supreme board of control. The weakness of the staff of the intelligence division as it stood in 1899 is criticised, and the opinion expressed, "that it was undermanned for the work of preparation for a great war will scarcely be denied." Attention is directed to the position of the commander-in-chief. While not dissenting *from* the judgment delivered by the court *of* inquiry acquitting gen. Truman from personal blame, and recognising, as urged by that court, that "the demands were of unprecedented magnitude," the commission says: "It is incredible that anyone who gave any thought to the matter could imagine that in the event of any war which necessitated the mobilisation of two army corps—and that, we have been persistently told, was the standard of preparation—it could have been possible for the inspector-general of remounts to continue to buy 'in a leisurely way,' through accustomed channels, from recognised dealers; and thus supply not only the first demands, but the wastages of war. It is unnecessary to labour the point that in the matter of remounts preparations for war were inadequate, or that the same state of things must not occur again." The report dealing with the supply of men (total number of men of all ranks employed from the beginning to the end of the war, officially estimated at 448,435; of these 256,340 belonged to the regular army, 109,048 came from the United Kingdom as militia, volunteers or imperial yeomanry, 30,633 came from the over-sea colonies, and 52,414 were raised in S. Africa) shows that the supply of men, 70,000 in the first phase of the war, was quite inadequate to its needs; the evidence taken from numerous officers showed a consensus of opinion that "the *morale*, including in that term the qualities of courage, endurance, discipline, and cheerfulness under adverse circumstances, left little or nothing to be desired." The personal zeal and devotion of the medical officers, the work of the engineers and army service corps, and the efficiency of the sea transport service are commended. The commission acquitted the treasury of the charge of throwing impediments in the way of expenditure urgently required by the war office. Report issued . . . . 25 Aug. 1903

SOUTH AUSTRALIA was visited by capt. Sturt in 1830, and explored shortly after by capt. Parker and Mr. Kent, the former of whom was killed by the natives. The boundaries of the province were fixed by 4 & 5 Will. IV. c. 95 (1834); and it was occupied 26 Dec. 1836, by capt. Hindmarsh, the first governor. It was colonised according to Mr. E. Gibbon Wakefield's scheme, which was carried out by the South Australian Colonisation Association. The colony for several years underwent severe trials through the great influx of emigrants, land-jobbing, building speculations, &c., which produced almost universal bankruptcy in 1839. In five years after, by the energy and liberality of Sir George Grey, the colonists had overcome their difficulties, and the prosperity of the colony appeared fully established. In 1842 the highly productive Burra Burra copper mines were discovered, and large fortunes were suddenly realised; but in 1851 the discovery of gold in New South Wales and Victoria almost paralysed this province by drawing off a large part of the labouring population. Very little gold was found in South Australia; but a reaction took place in favour of the copper mines and agriculture, &c. Before the discovery of gold, little trade existed between Adelaide (the capital of South Australia, pop. 1904, 170,729) and Melbourne; but in 1852 gold was transmitted from the latter to the former to the amount of 2,215,167*l.* principally for breadstuffs, farm produce, &c. The bishopric of Adelaide was founded in 1847. Discovery of alluvial gold at Tatulpa, Waukaringa, Oct.; favourable report Dec. 1886. Area, 903,000 sq. miles. SOUTHERN CONFEDERATE STATES, see *Confederates*.

SOUTHERN CONTINENT. The Southern Ocean was first traversed by Magellan in 1520; and explored by Wallis and Carteret in 1766; and by Cook in 1773 and 1774. Of the southern continent little more is known than that it is ice-bound, and contains active volcanoes. It was discovered in the first instance by capt. John Biscoe, on 27 Feb. 1831, in lat. 65° 57′ S., long. 47° 20′ E., extending east and west 200 miles,—this he named Enderby Land, after the gentleman who had equipped him for the voyage. Capt. Biscoe also discovered Graham's Land on 15 Feb. 1832, situated in lat. 67° 1′ S., long. 71° 48′ W. The Messrs. Enderby equipped three other expeditions in search of the southern continent, the last (in connection with some other gentlemen) in 1838, when capt. Balleny had command, who, on 9 Feb. 1839, discovered the Balleny Islands, in lat. 67° S., long. 165° E., and in March, 1839, Sabrina Land, in lat. 65° 10′ S, long. 118° 30′ E. In 1840, a French expedition, under the command of admiral D'Urville, and an American expedition, under the command of commodore Wilkes, greatly added to our knowledge in respect to the existence of a southern continent, and this was again increased by the expedition which sailed from England in 1839, under the command of capt. sir James Clark Ross, who discovered Victoria Land in 1841, and subsequently penetrated as far south as 78° 11′. SOUTHPORT, Lancashire, a watering place, founded in 1792 on a sandy waste, has rapidly progressed, now possessing an esplanade 3 miles long, and many fine buildings. It was made a municipal borough in 1867. Population, 1851, 4,765; 1871, 18,085; 1891, 43,026; 1901, 48,083.

SOUTH-SEA BUBBLE commenced with the establishment of the South-sea company in 1710, which was at first unwisely and afterwards dishonestly managed. It exploded in 1720, ruining thousands of families; and the directors' estates, to the value of 2,014,000*l.*, were seized in 1721 and sold. Mr. Knight, the cashier, absconded with 100,000*l.*; but he compounded the fraud for 10,000*l.*, and returned to England in 1743. Almost all the wealthy persons in the kingdom had become speculators; the artifices of the directors having raised the shares, originally 100*l.*, to the price of 1000*l.* A parliamentary inquiry took place in Nov. 1720, and Aislabie, chancellor of the exchequer, and several members of parliament were expelled the house in 1721; see *Law's Bubble*.

SOUTHWARK (S. London) was governed by its own bailiffs till 1327. The city, however, found great inconvenience from the number of malefactors who escaped thither, in order to be out of the reach and cognizance of the city magistrates; and a grant was made of Southwark to the city of London by the crown, for a small annuity. In Edward VI.'s reign it was formed into a city ward, and was named Bridge Ward Without, 1550.—*Southwark bridge* was designed by John Rennie, and built by a company, 1815-19, at an expense of 800,000*l.* It consists of three great cast-iron arches, resting on massive stone piers and abutments; the distance between the abutments is 708 feet; the centre arch is 240 feet span, the two others 210 feet each; and the total weight of iron 5308 tons. The bridge was freed from toll on 8 Nov. 1864, the company receiving a compensation from the city. An act for the payment of dividends to shareholders was passed in 1872.—*Southwark park* was opened, 19 June, 1869. The Roman Catholic diocese of Southwark formed, 1840. By the Seats act (1885), Southwark sends three members to parliament. Municipal borough, by London Government act, 1899 (10 aldermen, 60 councillors).

The priory church of St. Marie Overie, dating from the 13th century, was leased from the crown to the united parishes of St. Margaret and St. Mary Magdalene, and became the parish church as St. Saviour's in 1540. Since then many changes have been made; Mr. G. Gwilt repaired the tower, the lady chapel, and the choir, 1818 *et seq.* The roof of the nave was removed in 1831, and in 1839 replaced by lath and plaster. The prince of Wales laid the memorial stone of a new nave, 24 July, 1890; the church re-opened after restoration at a total cost of 95,000*l.*, the prince of Wales, the archbishop of Canterbury and others present, 16 Feb. 1897; memorial windows to the prince consort and others unveiled, new clock and bells started by the duke of Connaught, 22 June, 1898.

SPANISH EXHIBITION of Arts and Industries, Earl's Court, West Brompton, London, W., chairman, the duke of Wellington, a grandee of Spain, opened 1 June, closed 31 Oct. 1889.

SPANISH GRANDEES, the highe nobility, at one time almost equal to the kings of Castile and Aragon, and often setting their authority at defiance, were restrained on the union of the crowns by the marriage of Ferdinand and Isabella in 1474, who compelled several to relinquish the royal fortresses and domains which they held. Charles V. reduced the grandees to sixteen families (Medina-Sidonia, Albuquerque, &c.), dividing them into three classes.

SPANISH LANGUAGE (Lengua Castellana), is a dialect of Latin largely intermingled with Arabic, which was the legal language till the 14th century. Spanish did not become general till the 16th century. See *Drama*.

SPARTA, the capital of Laconia (Greek, Laconica), or Lacedæmon, the most considerable republic of the Peloponnesus, and the rival of Athens. Though without walls, it resisted the attacks of its enemies by the valour of its citizens for eight centuries. Lelex is supposed to have been the first king. From Lacedæmon the fourth king, and his wife Sparta, who are also spoken of as the founders of the city, it obtained names. The Lacedæmonians were a nation of soldiers, and cultivated neither the arts, sciences, commerce, nor agriculture. The early history is traditional and the dates conjectural.

SPARTACUS'S INSURRECTION (or Servile War). Spartacus was a noble Thracian, who served in an auxiliary corps of the Roman army. Having deserted and been apprehended, he was reduced to slavery and made a gladiator. With some companions he made his escape, collected a body of slaves and gladiators, 73 B.C.; ravaged southern Italy; and defeated the Roman forces under the consuls sent against him. Knowing the impossibility of successfully resisting the republic, he endeavoured to conduct his forces into Sicily, but was defeated and slain by Crassus, 71 B.C.

"SPASMODIC SCHOOL" of poetry, a name sarcastically given to Philip James Bailey ("Festus," 1839), Alex. Smith, Sydney Dobell (died in Aug. 1874), and others (precursors of Morris, Algernon Swinburne, and Rossetti, sarcastically termed the "fleshly school"), ridiculed by professor Aytoun in his "Firmilian," published 1854.

SPEAKERS OF THE HOUSE OF COMMONS. Peter de Montford, afterwards killed at the battle of Evesham, was the first speaker, 45 Hen. III., 1260; sir Thos. Hungerford is said to have been the first named "Speaker," 1372; but sir Peter de la Mare is supposed to have been the first regular speaker, 50 Edw. III., 1376. The king refused his assent to the choice of sir Edward Seymour, as speaker, 6 March, 1678; and serjeant William Gregory was chosen in his room. Sir John Trevor was expelled the chair and the house for taking a gratuity after the act for the benefit of orphans had passed, 12 March, 1694-5; a deputy speaker was appointed Aug. 1853.

SPECIES. Much controversy among naturalists arose in consequence of the publication, in 1859, of Mr. Charles Darwin's "Origin of Species," in which he suggests that all the various species of animals were not created at one time, but have been gradually developed by what he terms "natural selection," and the struggle for life in which the strong overcome the weak.

"This preservation of favourable individual differences and variations, and the destruction of those which are injurious, I have called *natural selection*, or the survival of the fittest."—*Darwin.*

The idea was put forth by Lamarck in his "*Philosophie Zoologique*," 1809 Similar views appear in the "Vestiges of Creation," 1844. Mr Darwin says that he infers "from analogy that probably all the organic beings which have ever lived on the earth have descended from some one primordial form, into which life was first breathed by the Creator." See *Development* and *Evolution.*

Charles Darwin was born 12 Feb. 1809; and died 19 April, 1882.

SPECTACLES, unknown to the ancients, are generally supposed to have been invented by Alexander de Spina, a monk of Florence, in Italy, about 1285. According to Dr. Plott, they were invented by Roger Bacon, about 1280. Manni attributes them to Salvino, who died 1317. On his tomb at Florence is the inscription, "Qui giace Salvino degli Armati, inventore degli occhiali: Dio gli perdoni le peccata" ("Here lies Salvino degli Armati, inventor of spectacles: May God pardon his sins").

SPECTATOR. The first number of this periodical appeared on 1 March, 1711; the last was No. 635, 20 Dec. 1714. The papers by Addison have one of the letters C L I O at the end. The most of the other papers are by sir Richard Steele, a few by Hughes, Budgell, Eusden, Miss Shephard, and others.—The *Spectator* newspaper (philosophical, whig), begun 5 July, 1828. Mr. Richard Holt Hutton, an able scholar, was editor from 1861 for 40 years, he died 9 Sept. 1897.

SPECTRUM, the term given to the image of the sun or any other luminous body formed on a

wall or screen, by a beam of light received through a small hole or slit, and refracted by a prism. The colours thus produced are red, orange, yellow, green, blue, indigo, and violet. The phenomena were first explained by Newton, whose "Optics" was published in 1704. Several of these colours are considered to be compounds of three primary ones: by Mayer (1775), red, yellow, and blue;—by Dr. Thos. Young (1801), red, green, and violet;—by Prof. Clerk Maxwell (1860), red, green, and blue. As the colour of a flame varies according to the substance producing it or introduced into it, so the spectrum varies. This led to the invention of a method of chemical analysis by professors Bunsen and Kirchhoff (1860), by which they discovered two new metals, and drew conclusions as to the nature of the atmosphere of the sun and stars, and of the light of the nebulæ, by comparing the spectrum with that produced by flames into which iron, sodium, and other substances have been introduced. For the invisible rays of the spectrum, see *Calorescence*, *Fluorescence*, *Bolometer*, and *Röntgen Rays*.

Fraunhofer's Lines In 1802 Dr. Wollaston observed several dark lines in the solar spectrum, in 1815 Joseph Fraunhofer not only observed them, but constructed a map of them, giving 590 lines or dark bands. By the researches of Brewster and others the number observed is now above 2000

Mr. Fox Talbot observed the orange line of strontium in the spectrum in 1826; and sir David Brewster observed other lines, 1833-42-3 In 1862-3 Mr William Huggins analysed the light of the fixed stars and of the nebulæ; and in 1865 Dr Bence Jones, by means of spectrum analyses, detected the presence of minute quantities of metals in the living body, introduced only a few minutes previously.

A spectroscopic society in Italy published a journal early in 1872

H. Schellen's "Spectralanalyse" published 1870; new edition 1883.

SPHERES. The celestial and terrestrial spheres and sun-dials are said to have been invented by Anaximander, 552 B.C.; and the armillary sphere by Eratosthenes, about 225 B.C. The planetarium was constructed by Archimedes before 212 B.C. Pythagoras maintained that the motions of the twelve spheres must produce delightful sounds, inaudible to mortals, which he called the music of the spheres.

SPINNING was ascribed by the ancients to Minerva, the goddess of wisdom. Arcas, king of Arcadia, taught his subjects the art about 1500 B.C. Tradition reports that Lucretia with her maids was found spinning, when her husband Collatinus paid a visit to her from the camp, that the wife of Tarquin was an excellent spinner, and that a garment made by her, worn by Servius Tullius, was preserved in the temple of Fortune. Till 1767, the spinning of cotton was performed by the hand spinning-wheel, when Hargreaves, an ingenious mechanic, near Blackburn, made a spinning jenny, with eight spindles, and also erected the first carding machine, with cylinders. Arkwright's machine for spinning by water was an extension of the principle of Hargreaves; but he also applied a large and small roller to expand the thread, for which he took out a patent in 1769. At first he worked his machinery by horses; but in 1771 he built a mill on the stream of the Derwent, at Cromford. In 1774-9, Crompton invented the mule (*which see*).

SPINTHARISCOPE, a contrivance for showing the scintillations of radium nitrate, exhibited at Royal Society soirée, May 15, 1903.

SPIRES (in Bavaria). The emperors held many diets at Spires since 1309, and it was the seat of the imperial chamber till 1689, when the city was burned by the French, and not rebuilt till after the peace of Ryswick, in 1697. The diet to condemn the reformers was held at Spires, called there by the emperor Charles V. 1529; see *Protestants*.

SPIRIT-LEVEL. The invention is ascribed to J. Melchisedec Thevenot, who died 1692.

SPIRIT-MOTOR. Mr. Yarrow explained to the Institute of Naval Architects his method of employing vaporised spirit instead of steam in the propulsion of steam launches, thus dispensing with the use of a boiler, &c., March, 1888. Petroleum is used as fuel in some railway locomotives, and petrol as the generating power for driving motor-cars.

SPIRITS, see *Distillation*. In all nations spirituous liquors have been considered as a proper subject of heavy taxation for the support of the

state; the duty imposed on spirits in 1746 led to much smuggling, *which see*; see *Alcohol, Brandy, Rum, Methylated Spirits, Whisky*, &c.

In 1840 England made about ten millions of gallons of spirits, Scotland about seven millions of gallons, and Ireland about nine millions of gallons.

SPIRITUAL COMBATANTS (Dukhobortsy). A Russian communistic religious sect formed by a quaker missionary near the end of the last century, now settled in the Caucasus, about 20,000 members. Its leading tenet, the refusal of all military service, so important in a country like Russia, has led to its repression and severe punishment. The sect also opposes legal tribunals, oaths, &c. Peter Veriguin, their energetic leader, was exiled to Siberia, 1894-5; count Leo Tolstoi gave a description of the sect and its sufferings, *Times*, 23 Oct. 1895. Continued prosecution of the sect, Oct. 1896. 1,129 exiles land at Larnaka, Cyprus, under British protection, 30 Aug. 1898; the climate being unsuitable about 7,000 leave for Manitoba, Canada, 1898-9; count Tolstoi gives 5,000 dols. for their relief, Dec. 1899; deeming it wrong to keep animals in servitude, they turn their horses, cows, &c., adrift, Aug. 1902; their petition for land to live in under no authority than that of God, refused by the British Columbian Government, 23 Oct. 1902; they leave their homes to christianize the world, about 28 Oct.; great suffering and distress; their march stopped at Minnedosa by mounted police; all sent back by special trains to their homes, 9-12 Nov. 1902.

Large number of fanatical Dukhobors, settled in the Saskatoon district, turned their cattle and horses loose, and began a fresh march to meet the Messiah, reported 27 Sept. 1904. They were turned back by the police.

SPIRITUALISM or SPIRIT-RAPPING. Spiritual manifestations (so called) began, it is said, in America about 1848, and attracted attention in this country about 1851, in the shape of rapping, table-turning, &c. Many inquisitive or credulous persons visited Mr. Daniel Dunglas Hume or Home and Mr. Forster, noted "spiritual mediums." Mr. Home, secretary of the Spiritual Athenæum, Sloane-street, Chelsea, published, in 1863, "Incidents of my Life," in which he states that the only benefit he derived from the "gift" was the convincing many unbelievers of the certainty of a life to come; see *Trials*, April, May, 1868. The "Spiritual Magazine" began Jan. 1860; the "Spiritualist," 9 Nov. 1869. The London Dialectical society published a report on spiritualism in Nov. 1871. Mr. (afterwards sir) Wm. Crookes, in 1871, investigated the phenomena, and ascribed them to "psychic force" ("Quarterly Journal of Science," July and Oct. 1871). Miss Kate Fox, said to be the earliest American medium (about 1852) was married to Mr. H. D. Jencken, in London, Dec. 1872. London Spiritualistic Alliance founded, 1884, incorporated 1896, publishes *Light*, started in 1881. The first president of the Alliance and editor of *Light* was Mr. W. Stainton-Moses; president and editor (1903), Mr. E. Dawson Rogers In connection with the Alliance is an extensive library of works on psychic science.

SPITALFIELDS (East London), so named from the priory of St. Mary Spittle, founded by Walter Brune and his wife Rosia, 1197; dissolved 1534. Here the French protestant refugees, after the revocation of the Edict of Nantes, settled and established the silk manufacture in 1685. In consequence of commercial changes the weavers endured much distress about 1829.

SPITHEAD, a roadstead near the Spit, a sandbank between Portsmouth and the Isle of Wight. See *Naval Reviews*, under *Navy of England*. Here in 1797 the sailors of the channel fleet mutinied for higher pay.

SPITZBERGEN, an archipelago in the Arctic ocean, discovered in 1553 by sir Hugh Willoughby, who called it Greenland, supposing it to be a part of the western continent. In 1595 it was visited by Barents and Cornelius, two Dutchmen, who pretended to be the original discoverers, and called it Spitzbergen, or sharp mountains, from the many sharp pointed and rocky mountains with which it abounds; see *Phipps*.

SPITZER COLLECTION, formed by Frederick Spitzer, a Jew, consisted chiefly of articles of *vertu* connected with the Middle Ages and Renaissance with some antiques but no paintings. It included metal work, *faience*, and majolica ware, arms and jewellery. He built an hotel at Paris to receive them, and died in 1890, aged about 75. The collection, valued at about 500,000*l*., was sold for about 400,000*l*., 17 April—17 June, 1893.

SPONGE, the name applied to a class of animals, *porifera*, intermediate between the *protozoa* and *cœlenterata*. Sponges are in general composed of an internal supporting framework of horny fibres interlaced with calcareous or siliceous spires (spicula) covered with a soft gelatinous substance, called sarcode. Their food consists chiefly of microscopic organisms contained in the water which constantly circulates through the minute pores of the sponge, and finds its outlet by the larger apical openings. Sponges exist in a variety of forms, one is the beautiful Venus's flower-basket. Several species of sponges are used for economic purposes; two species are chiefly brought from the Levant, and one of a coarser kind from the W. Indies and Florida. They are also artificially cultivated in the Adriatic by planting cuttings in waters favourable to their growth. A considerable trade is carried on in sponges, about 600 boats and some 5,000 men being employed in the Levant, and a similar number in the W. Indian trade, to the annual value respectively of 100,000*l*. and 70,000*l*.

SPONTANEOUS COMBUSTION of the human body, declared by most chemists to be impossible, although some cases have been recorded. The case of the countess of Gorlitz, 1847, disproved by confession of her murderer, March, 1850.

SPONTANEOUS GENERATION. The origin of the germs of infusorial animalcules developed during putrefaction, &c., has been warmly debated by naturalists. Spallanzani (about 1766), and especially M. Pasteur and others, assert that these germs are really endowed with organic life existing in the atmosphere. Needham (about 1747), and especially M. Pouchet and his friends in our day, assert that these germs are spontaneously formed out of organic molecules.—Pouchet's "*Hétérogénie*" appeared in 1859. Bastian's "Beginnings of Life," 1872. The researches of professor Tyndall, supporting Pasteur, and opposing Bastian, were published 1876-8. The late professor Huxley, in his presidential address to the British Association at Liverpool, 1870, affirmed that the doctrine of *biogenesis* (that life proceeds only from life) "was victorious all along the line" (see his article in *Nineteenth Century*, Jan. 1878).

"Spontaneous generation" (also termed *generatio æquivoca*, *epigenesis*, and *abiogenesis*) has been still further disproved by the laborious microscopic investigations of Dr. W. H. Dallinger, 1875-8. He found germs to stand a much greater heat than perfect organisms.

Experiments, carried out by Mr. J. Butler Burke in the Cavendish laboratory, Cambridge, on the action of radium chloride and radium bromide upon a gelatin medium commonly used for bacterial cultures, result in the production of microscopic growths, which, in Mr. Burke's opinion, after careful study, were highly organised bodies; to these he applied the name of *radiobes* (*which see*), announced in *Nature*, May, 1905.
M. Raphael Dubois, in a lecture at Lyons university, 4 Nov. 1904, referring to experiments he had made of a similar kind, calls the growths *bobes*. M. Dubois states (1905) that the same results are obtainable by non-radiferous chloride of barium. Experiments with pure barium salts on a gelatin medium by Prof. Rudge, see *Nature*, Oct. and Nov. 1905.

SPORTS. The *first* "Book of Sports," under the title of "The King's Majestie's Declaration to his Subjects concerning Lawful Sports to be used" on Sundays after evening prayers, was published by king James I., 24 May, 1618. The *second* "Book of Sports," with a ratification by his majesty Charles I., is dated 18 Oct. 1633. On the publication of the first "Book of Sports," there arose a long and violent controversy among English divines on certain points; see *Sabbatarians*, *Sunday*, &c. The book was ordered to be burnt by the hangman, and the sports were suppressed by the parliament. The "*Sporting League*" established to maintain British sports in opposition to the Anti-Gambling league, first meeting in London, earl of Coventry in the chair, 19 Dec. 1894. SPURS. Anciently the difference between the knight and esquire was that the knight wore gilt spurs (*eques auratus*), and the esquire silver ones. Two sorts of spurs seem to have been in use at the time of the Conquest, one called a pryck, having only a single point, the other a number of points of considerable size. Spurs nearly of the present kind came into use about 1400; see *Plating*.

SPURS, BATTLE OF. Henry VIII. of England, the emperor Maximilian, and the Swiss, in 1513, entered into an offensive alliance against France. Henry VIII. landed at Calais in the month of July, and soon formed an army of 30,000 men. He was joined by the emperor with a good corps of horse and some foot, the emperor as a *mercenary* to the king of England, who allowed him a hundred ducats a day for his table! They invested Terouenne with an army of 50,000 men; and the duc de Longueville, marching to its relief, was signally defeated on the 16th of August, at Guinegate. This battle was popularly called the battle of *Spurs*, because the French used their *spurs* more than their *swords*. The name was really obtained from the village of Spours near which it was fought. *Lodge*. The English king laid siege to Tournay, which submitted in a few days. *Hénault*. See *Courtrai*, for another "battle of spurs."

STABAT MATER, a Latin hymn, by Jacopone, 14th century, sung during Passion week in Catholic churches. Rossini's music to this hymn (1842) is often performed.

STADE DUES. At a castle near the town of Stade, in Hanover, certain dues on goods were charged by the Hanoverian government. The British government settled these dues in 1844. They were resisted by the Americans in 1855, and were abolished in June, 1861. Great Britain paid 160,000*l.* as her share of the compensation (3,000,000*l.*).

Here is the famous *Fingal's Cave*, the sides of which are formed of basaltic columns, while from the roof, 66 feet in height, hang clusters of short columns, whitened with calcareous stalactite. The cave is 227 ft. in length and 42 ft. wide at the entrance.

STAFF COLLEGE (Sandhurst), for providing an education to qualify military officers for the duties of the staff. The foundation stone was laid by the duke of Cambridge on 14 Dec. 1859.

STAFFORD, Staffordshire, a municipal and parliamentary borough, returning, since 1885, one M.P. A castle was erected here by Ethelfleda, countess of Mercia, 913; taken by the parliamentarian forces in 1643, it was demolished; a new castle, not completed, built by sir G. Jerningham, 1810-15. A charter was granted by king John, 1207, and the grammar-school was rebuilt and endowed by Edward VI., 1550. The two old churches of St. Mary and St. Chad are of interest. Isaac Walton was baptised in the former. Principal industries are boot and shoe manufacture and brewing. Population, 1881, 19,977; 1891, 20,270; 1901, 20,894. Fire at the workhouse infirmary, 7 deaths, 16 May, 1901.

STAGE COACHES, so called from the stages or inns at which the coaches stopped to refresh and change horses. *Bailey*. The stage-coach duty act passed in 1785. These coaches were made subject to salutary provisions for the safety of passengers, in 1810; to mileage duties, 1815. The acts were consolidated in 1832, and amended in 1833 and 1842. See *Mail Coaches*, &c.

STAMFORD BRIDGE (York). In 1066 Tostig, brother of Harold II., rebelled against his brother, and joined the invading army of Harold Hardrada, king of Norway. They defeated the northern earls and took York, but were defeated at Stamford-bridge by Harold, 25 Sept., and were both slain. The loss by this victory no doubt led to his defeat at Hastings, 14 Oct. following. The claim of Mr. William Grey for the *earldom of Stamford*, was granted by the house of Lords, 3 May, 1892.

STAMP-DUTIES. By 22 & 23 Charles II. (1670-1) duties were imposed on certain legal documents. In 1694 a duty was imposed upon paper, vellum, and parchment. The stamp-duty on newspapers was commenced in 1711, and every year added to the list of articles upon which stamp-duty was made payable.

Stamp act, which ordered a stamp to be affixed to all legal documents, in the colonies, and thereby to assist the revenue of Great Britain, was passed 22 March, 1765. It excited great opposition in N. America, with rioting, and consequently was repealed, 21 Feb. 1766. The resistance of the colonists to taxation, without representation in parliament, led to the American war, 1775-83.

STANDARD for gold and silver in England fixed by law, 1300. Standard gold is 22 parts out of 24 of pure gold, the other two parts or carats being silver or copper. The standard of silver is 11 oz. 2 dwts. of fine silver alloyed with 18 dwts. of copper, or 37 parts out of 40 pure silver, and three parts copper. In 1300 these 12 oz. of silver were coined into 20 shillings; in 1412 they were coined into 30 shillings; and in 1527 into 45 shillings. In 1545 Henry VIII. coined 6 oz. of silver and 6 oz. of alloy into 48 shillings; and the next year he coined 4 oz. of silver and 8 oz. of alloy into the same sum. Elizabeth, in 1560, restored the old standard in 60 shillings; and in 1601 in 62 shillings. The average proportions of silver to gold at the royal mint are 15½ to 1. The standard of plate and silver

STANDARD MEASURES. In the reign of Edgar a law was made to prevent frauds arising from the diversity of measures, and for the establishment of a legal standard measure to be used in every part of his dominions. The standard vessels made by order of the king were deposited in the city of Winchester, and hence originated the well-known term of "Winchester measure" of the time of Henry VII. (1487). The bushel so made is still preserved in the museum of that city. Henry I. also, to prevent frauds in the measurement of cloth, ordered a standard yard of the length of his own arm to be made and deposited at Winchester, with the standard measures of king Edgar. The Guildhall contains the standard measures of succeeding sovereigns. *Camden.* — The standard weights and measures were settled by parliament in 1824. The pound troy was to be 5760 grains, and the pound avoirdupois 7000 grains. The "Standard yard of 1760," in the custody of the clerk of the house of commons, was declared to be the Imperial Standard yard and the unit of measures of extension. This standard having disappeared (it was supposed to have been destroyed by the fire in 1834), a new commission was appointed to reconstruct it, and researches for this purpose, in conformity with the act, which directed the comparison of the standard with a pendulum vibrating seconds of time in the latitude of London, were begun by Francis Baily (died in 1844), continued by the rev. R. Sheepshanks till his death in 1855, and completed by G. B. Airy, astronomer royal. In 1855 was passed "an act for legalising and preserving the lost standards of weights and measures." The parliamentary copies of the standard pound and yard are deposited at the Royal Observatory, Greenwich. The standard weights and measures act was passed Aug. 1866. The Standard Commission published reports, 1866 *et seq.*

The old standard yard and other measures and weights, supposed to have been burnt at the fire of the parliament houses in 1834, were discovered by Mr. Bull's agents in the Journal Office, where they had been deposited and left unnoticed, July, 1891. The rude standards of the reign of Henry VII. and Elizabeth are still in existence.

"STANDARD," *id.* conservative newspaper; begun, morning, 1827; evening, 29 June, 1857 (the latter amalgamated with the *St. James's Gazette,* with the title of *The Evening Standard and St. James's Gazette,* 1905).

The purchase of the *Standard* by Mr. C. A. Pearson announced . . . . . 4 Nov. 1904

STANDARDS, see *Banners, Flags,* &c. The practice in the army of using a cross on standards and shields is due to the asserted miraculous appearance of a cross to Constantine, previously to his battle with Maxentius; Eusebius says that he received this statement from the emperor himself, 312. The standard was named LABARUM. For the celebrated French standard, see *Auriflamme.*— STANDARD OF MAHOMET; on this ensign no infidel dared look. Christians have been massacred by the Turkish populace for looking on it.—The British IMPERIAL STANDARD was first hoisted on the Tower of London, and on Bedford Tower, Dublin, and displayed by the Foot Guards, on the union of the kingdoms, 1 Jan. 1801.

STANFORD COURT, Worcestershire, the ancient mansion of sir Francis Winnington, burnt 5-7 Dec. 1882; valuable portraits, books, MSS. &c., destroyed.

STANHOPE ADMINISTRATION was formed by James (afterwards earl) Stanhope and the earl of Sunderland, 15 April, 1717. Stanhope was premier and chancellor of the exchequer; lord (afterwards earl) Cowper, lord chancellor; earl of Sunderland and Joseph Addison, secretaries of state, &c. In March, 1718, Addison resigned, and the earl of Sunderland became premier.

STANNARY COURTS of Devon and Cornwall for the administration of justice among the tin miners, whose privileges were confirmed by 33 Edw. I. 1305. They were regulated by parliament in 1641, and at many times since. A "Stanneries act" was passed in 1869; another act in 1887. The Stannaries court (abolition) act, passed 14 Aug. 1896, came into force 1 Jan. 1897.

STAPLE (literally that which is fixed). The chief English staple commodities which were traded in by privileged merchants, and on which customs were levied, were wool, skins, leather, tin, lead and sometimes cloth, butter, and cheese; certain towns were appointed for the collection of the duties; statutes relating to the staple were passed by Edward III., Richard II., and Henry VI. Edward III.'s "ordinacio stapularum" (ordinance of the staple) was enacted in 1353.

STARCH is a sediment produced at the bottom of vessels wherein wheat has been steeped in water: it is soft and friable, easily broken into powder, and is used to stiffen and clear linen, with blue; its powder is employed to powder the hair. The art of starching linen was brought into England by Mrs. Dinghein, a Flemish woman, 1 Mary, 1553. *Stow.* Patents for obtaining starch from other substances have been taken out: from potatoes by Samuel Newton and others in 1707; from the horse-chestnut by Wm. Murray in 1796; from rice by Thomas Wickham in 1823; from various matters by Orlando Jones in 1839-40.

STAR-CHAMBER, COURT OF. So called haply from its roof being garnished with stars. *Coke.* This court of justice was called Star-Chamber, not from the *stars* on its roof (which were obliterated even before the reign of queen Elizabeth), but from the *Starra,* or Jewish covenants, deposited there by order of Richard I. No *star* was allowed to be valid except found in those repositories, and here they remained till the banishment of the Jews by Edward I. The court was instituted or revived, 3 Hen. VII. 1486, for trials by a committee of the privy council, which was in violation of Magna Charta; as it dealt with civil and criminal causes unfettered by the rules of law. In Charles I.'s reign it exercised its power upon several bold innovators, who gloried in their sufferings, and contributed to render government odious and contemptible. It was abolished in 1640. There were in this court from 26 to 42 judges, the lord chancellor having the casting voice. The judicial committee of the privy council is the Star-chamber revived under another name.

STAR OF INDIA, an order of knighthood for India, instituted by letters patent 23 Feb., gazetted 25 June, 1861, enlarged in 1866 and 1903.

It comprised the sovereign, the grand master, 25 knights (Europeans and natives), and extra or honorary knights. The prince of Wales (now king) held a grand chapter at Calcutta, 1 Jan. 1876.

STARS, THE FIXED. They were classed into constellations (*which see*), it is supposed, about 1200 B.C. Hicetas, of Syracuse, taught that the sun and the stars were motionless, and that the earth moved round them, about 344 B.C. (this is mentioned by Cicero, and perhaps gave the first hint of this system to Copernicus). Job, Hesiod, and Homer mention several of the constellations. The Royal Library at Paris contains a Chinese chart of the heavens, made about 600 B.C., in which 1460 stars are correctly inserted. The aberration of the stars was discovered by Dr. Bradley, 1727; see *Astronomy*, and *Solar System*. Maps of the stars were published by the Society for the Diffusion of Useful Knowledge in 1839, and a set of Celestial Maps, issued under the superintendence of the Royal Prussian Academy, was completed in 1859. See *Photometer*.

STATE MEDICINE, see under *Sanitation*, 2 May, 1888.

STATE PAPER OFFICE was founded in 1578, now merged into the Public Record Office. In 1856 the British government began the publication of Calendars of State Papers, invaluable to future historians; brought down to William and Mary, 1898.

STATES-GENERAL OF FRANCE. An ancient assembly of France, first met, it is said, in 1302 to consider the exactions of the pope. Previous to the Revolution, it had not met since 1614. The states consisted of three orders, the clergy, nobility, and commons. They were convened by Louis XVI., and assembled at Versailles, 5 May, 1789 (308 ecclesiastics, 285 nobles, and 621 deputies or *tiers état*, third estate). A contest arose whether the three orders should make three distinct houses, or but one assembly. The commons insisted upon the latter, and assuming the title of the National Assembly, declared that they were competent to proceed to business, without the concurrence of the two other orders, if they refused to join them. The nobility and clergy found it expedient to concede the point, and they all met in one hall; see *National Assembly*. Centenary, see *France*, 5 May, 1889.

STATIONERS. Books and papers were formerly sold only at stalls; hence the dealers were called stationers. The company of stationers of London is of great antiquity, and existed long before printing was invented, yet it was not incorporated until 3 Philip & Mary, 1557. Their old dwelling was in Paternoster-row; 500th anniversary celebrated 10 June, 1903.

STATISTICS, the science of the state, political knowledge, is said to have been founded by sir Wm. Petty (1623—1687), in his "Political Arithmetic," published 1691. The term is said to have been invented by professor Achenwall of Gottingen in 1749. The first statistical society in England was formed at Manchester in 1833; the Royal Statistical Society of London, which publishes a quarterly journal, was established 15 March, 1834, for the purpose of procuring, arranging, and publishing "facts calculated to illustrate the condition and prospects of society." STATUES, see *Sculpture*, &c. Two statues of Rameses II. and one of his queen (about 1322 B.C.), 10 feet high, discovered at Aboukir by Daninos Pasha, Oct. 1891. Phidias, whose statue of Jupiter passed for one of the wonders of the world, was the greatest statuary among the ancients,

The first equestrian statue of bronze, founded at one cast, was that of Louis XIV. of France, 1699; it was elevated about 1724.

STEAM GUN; suggested by Wm. Murdoch, 1803. One patented by Messrs. Perkins, in 1824, was ineffectual.

STEAM HAMMER, invented by Mr. James Nasmyth in 1838, and patented by him 18 June, 1842. Its main feature is the absolutely direct manner by which the elastic power of steam is employed to lift up and let fall the mass of iron constituting the hammer, which is attached direct to the end of a piston-rod passing through the bottom of an inverted steam cylinder placed immediately over the anvil.

In 1842, Mr Nasmyth applied his steam-hammer to driving piles, which has importantly assisted in the execution of great public works. Owing to its vast range of power, forged iron-work can now by its means be executed on a scale, and for a variety of purposes, with an ease and perfection not previously possible. Parts of gigantic marine steam-engines, anchors, and Armstrong guns, as well as the most minute details of machinery, as in Enfield rifles, are executed by the steam-hammer.

A steam-hammer, said to be the then largest in the world, completed at Woolwich: the falling portion weighs 40 tons, and when used with top steam (51 tons) has the force of 91 tons, April, 1874. One at Schneider's works, Creuzot, France; weight between 75 and 80 tons, Dec. 1877.

Mr. Nasmyth, aged 81, died 7 May, 1890 His Autobiography, edited by Dr. S. Smiles, was published in 1883.

STEAM-MAN. A figure constructed to drag a phaeton received this name in New York in March, 1868.

STEAM NAVIGATION, see under *Steam*.

STEAM-PLOUGHS were patented by G. Callaway and R. A. Purkes, 1849; H. Cowing, 1850; and others. John Fowler's of 1854 is much approved.

STEAM-RAM (to be used in naval warfare), was invented by Mr. James Nasmyth in 1836, and communicated to the Admiralty in 1845. Steam-rams built by Mr. James Laird of Birkenhead for the Confederates in N. America, were stopped and eventually bought by the British government, 1864.

STEARINE (from *stear*, suet), that part of oils and fats which is solid at common temperature. The nature of these substances was first made known by Chevreul, in 1823, who showed that they were compounds of peculiar acids, with a base termed *glycerine;* of these compounds the chief are stearine, margarine, and elaine; see *Candles*.

STEEL, metal, a compound of iron and carbon, exists in nature, and has been fabricated from the earliest times. It was certainly used by the Egyptians, Assyrians, and Grecks. It has largely replaced cast iron in ship building, &c.

Reaumur discovered the direct process of making steel by immersing malleable iron in a bath of cast iron 1722

A manufactory for cast steel is said to have been set up by Benjamin Huntsman at Handsworth, near Sheffield 1740

The manufacture of shear steel began in Sheffield, about 1800

German steel was made at Newcastle previously by Mr. Crawley.

The inventions of Mushat (1800), Lucas (1804), and Heath (1839), were important steps in this manufacture; see *Engraving*.

Reipe patented his "puddled steel" 1850

Mr. (aft. sir) H. Bessemer made steel by passing cold air through liquid iron, 1856. By this method 20 tons of crude iron have been converted into cast steel in 23 minutes.*

Tungsten steel was made in Germany, 1859; and M. Fremy made steel by bringing red-hot iron in contact with carbonate of ammonia 1861

* For this invention he had received by royalties 1,507,748*l*. up to 1879; also many foreign honours; knighted June, 1879; born 19 Jan. 1813, died 15 March, 1898.

STEEL PENS. "Iron pens" are mentioned by Chamberlayne in 1685. Steel pens, made long before, began to come into use about 1820, when the first gross of three-slit pens was sold wholesale for 7*l.* 4*s.* In 1830 the price was 8*s.*, and in 1832, 6*s.* A better pen is now sold for 6*d.* a gross. Birmingham in 1858 produced about 1000 million pens per annum, and the output has greatly increased since. Women and children are principally employed in the manufacture. Perry, Mitchell, and Gillott are eminent makers. Joseph Gillott, originally a mechanic, made a large fortune by steel-pen making. He died 5 Jan. 1872, aged 72.

STEEL-YARD. An ancient instrument, the same that is translated *balance* in the Pentateuch. The *Statera Romana*, or Roman steel-yard, is mentioned in 315 B.C.—The STEEL-YARD or STILLYARD COMPANY, London merchants, who had the steel-yard in Thames-street assigned to them by Henry III., about 1232, were Flemings and Germans, and the only exporters, for many years after, of the staple commodities of England. *Anderson.* The company lost its privileges, finally, in 1578; and the merchants were expelled from England in 1597.

The Russians quitted San Stefano, 22 Sept. 1878. It established independence of Montenegro, Servia, and Roumania; constituted Bulgaria a tributary principality; required a heavy indemnity from Turkey for Russia, who was to gain a port on the Black Sea and Kars; to exchange the Dobrudscha for Bessarabia; to obtain rights for Christians; to open the Bosphorus and Dardanelles in peace and war; &c.

STENOGRAPHY (from *stenos*, narrow), the art of short-hand, said to have been practised by the ancients. Its improvement is attributed to the poet Ennius, to Tyro, Cicero's freedman, and still more to Seneca. The *Ars Scribendi Characteris*, written about 1412, is the oldest system extant. Dr. Timothy Bright's "Characterie, or the Arte of Shorte, Swifte, and Secrete Writing," published in 1588, is the first English work on short-hand. Peter Bales, the famous penman, published on stenography in 1590; and John Willis published his "*Stenographie*" in 1602. Since then many systems and modifications have been produced. See *Phonography.*

Edmund Willis's system, 1618; Thomas Shelton's system, 1620 (used by Samuel Pepys); Wm. Cartwright's, 1642-69 (known as Rich's); Wm. Mason's, 1672, improved by Thos. Gurney (1720) (known as Gurney's, officially used in parliament since 1813); John Byrom's, published after his death, 1767; Wm. Mavor's, 1780; Sam Taylor's, on which are based ("Odell's and Harding's") 1786; Rev. Richard Roe's, 1820, first Script system; James H. Lewis's, 1812-15; Isaac Pitman's (phonographic), 1837, see *Phonography;* A. M. Bell's, 1849; Prof. Everett's, 1877; T. Cooper ("Parliamentary shorthand," Gurney's), 1858; E. STEPHEN'S CHAPEL, ST. (Westminster), built by king Stephen, about 1135. It was rebuilt by Edward III. in 1347, and by him made a collegiate church, to which a dean and twelve secular priests were appointed. Soon after its surrender to Edward VI., about 1548, it was applied to the use of Parliament; see *Parliament.* It was destroyed by fire, 16 Oct. 1834. The Society of Antiquaries published memorials of it about 1810; and Mr. Mackenzie's work appeared in 1844. The restoration of the beautiful crypt was completed in Jan. 1870.

STEPNEY, a parish, E. London, the Stebenhide of Domesday book. Edward I. summoned a parliament here, 1299. Stepney suffered severely

by the plague, 1625 and 1665. Stepney-green was restored and opened as a park by the Metropolitan Board of Works, Aug. 1872. Stepney church, built 1470, restored 1899, much damaged by fire, 12 Oct. 1901; re-opened 21 June, 1902. One of the divisions of the Tower Hamlets; returns one M.P. Constituted a municipal borough by London Government act 1899. (10 aldermen, 60 councillors). Bishop-suffragan, the right rev. Cosmo Gordon Lang, 1901. Population, 1881, 58,543; 1891, 57,599; 1901, 298,600.

STEREOCHEMISTRY, the chemistry of atoms, carbon, &c., in space, connected with the researches of M. Pasteur and his colleagues, Van't Hoff and Le Bel; was so named about 1890 by Victor Meyer. Van't Hoff's "Chemistry in Space," translated by J. E. Marsh. "Handbuch der Stereochemie," by Dr. C. A. Bischoff and Dr. Paul Walden, published 1893. Prof. J. Wislicenus, one of its earliest exponents, died in 1902.

STEREOCHROMY, a mode of painting in which water-glass (an alkaline solution of flint, silex) serves as the connecting medium between the colour and the substratum. Its invention is ascribed to Von Fuchs, who died at Munich on 5 March, 1856. Fine specimens of this art by Kaulbach and Echter exist in the Museum at Berlin, and also at Munich.

STEREOMETER, by which is compassed the art of taking the contents of vessels of liquids by gauging, invented about 1350. *Anderson.* M. Say's stereometer, for determining the specific gravity of liquids, porous bodies and powders as well as solids, was described in 1797.

STEREOSCOPE (from *stereos*, solid, and *skopein*, to see), an optical instrument for representing in apparent relief natural objects, &c., by uniting into one image two plane representations of these objects as seen by each eye separately. The first stereoscope by reflection was constructed and exhibited by professor Charles Wheatstone in 1838, who had announced its principle in 1833. Since 1854 stereoscopes have been greatly improved. By Mr. John Anderton's lantern stereoscope, remarkable effects were exhibited on a screen in the Royal Society's lecture room, 7 June, 1893. Mr. T. E. Heath the first to apply the stereoscope to sidereal astronomy. His instrument exhibited to Royal Society, 1905.

STEREOTYPE, a cast from a page of movable printing-types, so named by the Parisian printer, Didot, 1798. It is said that stereotyping was known in 1711. It was practised by Wm. Ged of Edinburgh, about 1730. Some of Ged's plates are at the Royal Institution, London. A Mr. James attempted to introduce Ged's process in London, but failed, about 1735.* *Nichols.* Stereotype printing was in use in Holland, in the last century; and a quarto Bible and a Dutch folio Bible were printed there. *Phillips.* It was revived in London by Wilson in 1804. Since 1850 the durability of stereotypes has been greatly increased by electrotyping them with copper or silver. Stereotyping used for printing the *Times*, 1856, *et seq.* It soon came into general use for newspaper printing.

In the library of the Royal Institution is an edition of Sallust, with this imprint: "Edinburgi, Gulielmus Ged, auri faber Edinensis, non typis mobilibus, ut vago fieri solet, sed tabellis seu laminis fusis, excudebat. 1744." (Printed at Edinburgh by William Ged of Edinburgh, goldsmith, not with moveable types, as is commonly done, but with cast tablets or plates.)

* It was hotly opposed by the journeymen printers.

STERLING (money). Ducange says (1733), "Esterlingus, sterlingus, are English words relating to money, and hence familiar to other nations, and applied to the weight, quality, and kind of money." "Denarius Angliæ, qui vocatur sterlingus," stat. Edw. I. (The penny of England, which is called sterling.) Camden derives the word from *easterling* or *esterling*, observing that the money brought from Germany, in the reign of Richard I., was the most esteemed on account of its purity, being called in old deeds "*nummi easterling.*" Others derive the word from the Easterlings, the first moneyers in England.

STETHOSCOPE. In 1816 Laënnec, of Paris, by rolling a quire of paper into a kind of cylinder, and applying one end to the patient's chest and the other to his own ear, perceived the action of the heart in a much more distinct manner than by the immediate application of the ear. This led to his inventing the stethoscope, or "breast-explorer," the principle of which, now termed "auscultation," was known by Hippocrates (357 B.C.), and by Robert Hooke, 1681. See *Water*, 1895.

STETTIN (Pomerania), an ancient city, formerly held by the Sidini and Venedes, was taken by Boleslas of Poland in 1121. After being conquered by the Swedes, Russians, and French, it was awarded to Prussia in 1814. Population, 1890, 116,239; 1900, 210,680.

STEWARD OF ENGLAND, LORD HIGH. The first grand officer of the crown. This office was established prior to the reign of Edward the Confessor, and was formerly annexed to the lordship of Hinckley, Leicestershire, belonging to the family of Montfort, earls of Leicester, who were, in right thereof, lord high stewards of England; but Simon de Montfort, the last earl of this family, having raised a rebellion against his sovereign, Henry III., was attainted, and his estate forfeited to the king, who abolished the office, 1265. It is now revived only *pro hâc vice*, at a coronation, or the trial of a peer. The first afterwards appointed was Thomas, second son of Henry IV. The first for the trial of a peer was Edward, earl of Devon, on the arraignment of the earl of Huntingdon, in 1400. The last was lord Denman at the trial of the earl of Cardigan, 16 Feb. 1841. The duke of Hamilton was lord high steward at the coronations of William IV. 1831, and Victoria, 1838. The duke of Marlborough was lord high steward at the coronation of king Edward VII. on Aug. 9, 1902.

STEWARD OF THE HOUSEHOLD, LORD (an ancient office), has the sole direction of the king's house below-stairs; he has no formal grant of his office, but receives his charge from the sovereign in person, who, delivering to him a white wand, the symbol of his office, says, "*Seneschal, tenez le bâton de notre maison.*" This officer has been called lord steward since 1540; previously to the 31st of Henry VIII. he was styled grand master of the household. His function as a judge was abolished in 1849.

STOCKINGS of silk are said to have been first worn by Henry II. of France, 1547. In 1560 queen Elizabeth was presented with a pair of knit black silk stockings, by her silk-woman, Mrs. Montague, and she never wore cloth ones any more. *Howell.* He adds, "Henry VIII. wore ordinary cloth hose, except there came from Spain, by great chance, a pair of silk stockings; for Spain very early abounded with silk." Edward VI. was presented with a pair of Spanish silk stockings by his merchant, sir Thomas Gresham; and the present was then much taken notice of. *Idem.* Others relate that William Rider, a London apprentice, seeing at the house of an Italian merchant a pair of knit worsted stockings from Mantua, made a pair like them, the first made in England, which he presented to the earl of Pembroke, 1564. *Stow.* The art of weaving stockings in a *frame* was invented in England by the rev. Mr. Lee, of Cambridge, in 1589, twenty-five years after he had learnt to knit them with wires or needles. Cotton stockings were first made in 1730; see *Cotton. Digitated stockings* (like gloves), introduced 1882.

STONE. Stone buildings erected in England by Benedict Biscop about 670. A stone bridge built at Bow, in the 11th or 12th centuries, is accounted the first; but a bridge exists at Crowland, which is said to have been built in 860; see *Bridges*. The first stone building in Ireland was probably a round tower; see *Building*. Stone china-ware was made by Wedgwood in 1762. *Artificial stone* for statues was manufactured by a Neapolitan, and introduced into England, 1776. Stone paper was made in 1776; see *Ransome's Artificial Stone*, and *Lithotomy*. For stone implements, see *Flints*, and *Piano-forte*. An orchestra composed of wind instruments made of terra-cotta appeared in London in 1874.

The cursus near Stonehenge was discovered by Dr. Stukeley, 6 Aug. 1723. The origin and object of these remains are still very obscure. See W. M. Flinders Petrie's "Stonehenge: Plans, Description, and Theories." 1880.

STOVES. The ancients used stoves which concealed the fire, as the German stoves yet do. They lighted the fire also in a large tube in the middle of the room, the roof being open. Apartments were warmed by portable braziers. Stoves on this old principle, improved, continue in use in many houses and public establishments in England, and generally on the continent. Dr. Franklin and count Rumford (who invented a stove) pointed out the waste of fuel in our open fires; and Dr. Neil Arnott patented his "improvements in the production and agency of heat," 14 Nov. 1821. Dr. C. William Siemens described his smokeless stove in "*Nature*" for 11 Nov. 1880. See *Chimneys*, and *Cottager's Stove*.

Mr. T. Pridgin Teale publishes his inventions, in which he revives the principles of count Rumford with additions, 1883–6.

SUGAR* (*Saccharum officinarum*) is supposed to have been known to the ancient Jews. Found in the East Indies by Nearchus, admiral of Alexander, 325 B.C.—*Strabo*. An oriental nation in alliance with Pompey used the juice of the cane as a common beverage.—*Lucan*. It was prescribed as a medicine by Galen, 2nd century. Brought into Europe from Asia, A.D. 625;—in large quantities, 1150. Attempted to be cultivated in Italy; not succeeding, the Portuguese and Spaniards carried it to America about 1510.

The sugar-cane transported from Syria to Cyprus about 1148; from Madeira about 1420; and to the West Indies . . . . . about 1506
It is not known at what date sugar was introduced into England, but it seems to have been prior to the reign of Henry VIII. Mr. Whittaker, in the History of Whalley, p. 109, quotes an instance in 1497

SUICIDE (from *sui*, self; *cædere*, to kill), the slayer of himself. The first instances recorded in Jewish history are those of Samson, about 1120, and Saul, 1055 B.C. The Greek and Roman philosophers deemed it a crime, and burned the offending hand apart from the rest of the body. In the reign of Tarquin I., the Roman soldiers, thinking themselves disgraced by being ordered to make common sewers, destroyed themselves, 606 B.C. Cato committed suicide, 46 B.C.* In the Roman catholic church, in the 6th century it was ordained that no commemoration should be made in the Eucharist for such as committed self-murder. This ecclesiastical law continued till the Reformation, when it was admitted into the statute law of England by the authority of parliament, with the confiscation of land and goods. Till 1823 the body of the suicide was directed to be buried in a cross-road, and a stake to be driven through it. A new act, suppressing the barbarous customs, was passed in 1882. It is now usually buried in consecrated ground without a religious ceremony. Thomas Cooper, the eminent Chartist, author of "The Purgatory of Suicides," an epic poem, published in 1845, died, aged 87, 15 July, 1892. Dr. Henry Morselli published "Suicides: an Essay," 1881. There were 7,572 suicides in France in 1887.

* Sugar, long considered a neutral substance, without congeners, has become the head of a numerous family, viz.: Cane-sugar (*sucrose*, from the sugar-cane; boiled with dilute acids it becomes *glucose*); Fruit-sugar (from many fruits); Grape-sugar (*glucose*, from dried fruits and altered starch); sugar of milk: *melitose* (from eucalyptus, by Berthelot in 1856); *sorbin* (from the berries of the mountain ash, by Pelouze); *inosite* (from muscular tissue, Scherer); *dulcose* (by Laurent); *mannite* (from manna, obtained from the fraxinus ornus, a kind of ash); *quercite* (from acorns); to these have been added *mycose*, by M. Mitscherlich, and *melezetose* and *trehalose*, by M. Berthelot.

* Three instances of self-destruction by fire: the philosopher Empedocles threw himself into the crater of Mount Etna; a Frenchman threw himself, in 1820, into the crater of Vesuvius; and an Englishman, who jumped into the furnace of a forge about the year 1811. Plutarch relates that an unaccountable passion for suicide seized the Milesian virgins, from which they could not be prevented by the tears and prayers of their friends; but a decree being issued that the body of every young maid who did self-murder should be drawn naked through the streets, a stop was soon put to the extraordinary frenzy.

SUITORS' FUND (in the court of chancery) in 1862 amounted to 1,290,000*l.* As this money has no specific owner, a proposal was made by government to apply it to the building of new law-courts, payment of all legal claims being guaranteed, which was directed by the "Courts of Laws Fees" act, passed 20 Aug. 1867.

SULPHUR has been known from the earliest times. Basil Valentine mentions its production from green vitriol. Sulphuric acid (vitriol), produced by him from burning sulphur, was introduced into England about 1720. Sulphur has been the object of research of many eminent chemists during the present century, and many discoveries have been made, such as its allotropic condition, &c. It is the inflammable constituent in gunpowder, and a deleterious ingredient in coal gas. The sulphur mines of Sicily have been wrought since the 16th century, but the exportation was inconsiderable till about 1820; in 1838 the trade increased so much that Great Britain alone imported 38,654 tons. In that year the Neapolitan government was induced to grant a monopoly of the trade to a French company; but a firm remonstrance from the British government led to a discontinuance of this impolitic restriction in 1841, which, however, gave a great and lasting impetus to the British sulphur manufacture.

SULPHURYL FLUORIDE, a colourless, odourless gas, which can be liquefied and solidified at low temperatures; prepared by Moissan and Lebeau, by the action of fluorine on sulphur dioxide; reported, 17 Aug. 1901.

SULU, Sooloo or Soluk Archipelago, a group of above 60 islands in the Malay Archipelago.

SUMATRA, an island in the Indian ocean, called Java Minor by Marco Polo, and visited by Nicolo di Conti prior to 1449. Mainly on account of the pepper trade, the Dutch formed a settlement at Padang about 1649, and the British at Bencoolen about 1685. The Dutch possessions with Java were acquired by the British in 1811; but were restored in 1816. In 1824 the Dutch acquired all the British settlements in Sumatra, in exchange for Malacca and some possessions in India. Restrictions on their progress in Sumatra were removed by treaty Feb. 1872. Severe fighting between the Dutch and the Achinese natives with varying results, mostly in favour of the Dutch, April 1873 to 1879. Dutch successful in war, peace announced, Aug. 1879. New war; great victory of the Dutch, 13 Sept. 1882. Sumatra suffered much by the volcanic eruptions and earthquakes of 26-27 Aug. 1883. See *Java* and *Holland*, 1896 *et seq.*

SUMMARY JURISDICTION ACT, 42 & 43 Vict. c. 49, 11 Aug. 1879. It amends the law respecting the jurisdiction of magistrates, in regard to fines, imprisonments, &c. It came into operation 1 Jan. 1880. Amended 1881, 1884 and 1895; again, powers extended, 1899.

SUMPTUARY LAWS restrain excess in dress, furniture, eating, &c. The laws of Lycurgus were severe against luxury, probably 9th century B.C. Those of Zaleucus ordained that no sober woman should go attended by more than one maid in the street, or wear gold or embroidered apparel, 450 B.C. —*Diog. Laert.* The *Lex Orchia* among the Romans (181 B.C.) limited the guests at feasts, and the number and quality of the dishes at an entertainment; and it also enforced that during supper, which was the chief meal among the Romans, the doors of every house should be left open. The English sumptuary laws, chiefly of the reigns of Edward III. and Henry VIII., were repealed in 1856; see *Dress*.

SUN.* Pythagoras taught that the sun was one of the twelve spheres, about 529 B.C. The relative distances of the sun and moon were first calculated geometrically by Aristarchus, who also maintained the

Fizeau and Foucault (1864). "The error corrected corresponds to the apparent breadth of a human hair at 125 feet, or of a sovereign 8 miles off."—*Herschel.* Distance computed by sir G. B. Airy from results of the observation of transit of Venus (9 Dec. 1874), 93,321,000 miles, Oct. 1877; 92,600,000, June, 1878. From the transit of 1882 by professor Harkness (an American), 92,385,000 miles, October, 1888. stability of the sun, about 280 B.C. Numerous theories were ventured during fifteen centuries, and astronomy lay neglected till about A.D. 1200, when it was brought into Europe by the Moors of Barbary and Spain. The Copernican system was made known in 1530; see *Copernican System* and *Solar System*. Galileo and Newton maintained that the sun was an igneous globe. The transit of Mercury was observed by Gassendi, 1631. For recent discoveries, see *Eclipses*, *Spectrum*, and *Venus*.

SUNDAY was the day on which, anciently, divine adoration was paid to the Sun. Among Christians it is commonly called *Dies Dominica*, or Lord's day, on account of our Saviour's appearance on that day, after his resurrection. The first civil law that was issued for the observance of this day, combined it with that of the seventh-day Sabbath and other festivals (*Eusebius*, *Life of Constantine*), and it was followed by several imperial edicts, in favour of this day, which are extant in the body of Roman law, the earliest being that of Constantine the Great, dated 7 March, 321. SUPREMACY over the church was claimed by pope Gelasius I. as bishop of Rome, 494. On 15 Jan. 1535, Henry VIII. by virtue of the act 26 Hen. VIII. c. 1, formally assumed the style of "on earth supreme head of the church of England," which was retained by Edward VI., Mary I. (for a time), but was refused by Elizabeth, and has never been revived by succeeding sovereigns. The bishop of Rochester (Fisher) and the ex-lord chancellor (sir Thomas More) and many others were beheaded for denying the king's supremacy in 1535; and in 1578, John Nelson, a priest, and Thomas Sherwood, a young layman, were executed at Tyburn for the same offence. The "act of Supremacy," repealed by 1 & 2 Phil. and Mary, c. 8 (1554), was re-enacted 1 Eliz. c. 1 (1559).

SUPREME COURT OF JUDICATURE was constituted by the Judicature act 36 & 37 Vict. c. 66, passed 5 Aug. 1873, to come into operation 1 Nov. 1874. In 1874 this was deferred to 1 Nov. 1875. The "Council of Judges" appointed by this act met to consider questions relating to the reform of the law, 18 Jan. 1892. See under *Judges.*

The existing courts were to be united into one Supreme Court, divided into the High Court of Justice and the Court of Appeal. The High Court to consist of the lord chancellor, the two lord chief justices, the vice-chancellors, and the other judges: (hereafter the court to consist of 21 judges.)
Five divisions: 1. Chancery, 2 Queen's Bench, 3. Common Pleas, 4. Exchequer, and 5. Probate, Divorce, and Admiralty; subject to alteration.
The Court of Appeal to consist of five ex-officio judges (viz, lord chancellor, two lord chief justices, lord chief baron, master of the rolls), and such others as may be appointed (§§ 20, 21, 22).
Appeals to the house of lords or the judicial committee of the privy council to be discontinued.
Law and equity to be concurrently administered; law terms abolished; and sittings in vacation provided for. See under *Terms.*
The act passed 11 Aug. 1875, suspended §§ 20, 21, and 55, converted the proposed court of appeal into an intermediate court till 1 Nov. 1876. (See below.)

Act to come into operation . . . . . 1 Nov. 1876

The court may sit during prorogation of parliament.
The statute relating to the judicial committee of the privy council and to the intermediate court of appeal is amended 1876
By this act also the Queen's Bench, Common Pleas, and Exchequer divisions of the Supreme Court are converted into 15 courts of first instance or primary courts.

An amendment act (42 & 43 Vict. c. 78), relating to offices, fees, &c., passed . . . . 15 Aug. 1879
At a meeting of the judges it was resolved to recommend the abolition of the exchequer and common pleas, and their consolidation into one, termed the "queen's bench division," under the lord chief justice of England, 30 Nov.; order in council, 16 Dec. 1880
Carried into effect; old divisions at an end; judicature act carried out for the first time, 7 March, 1881

SURAT (E. Indies). Before the English East India company obtained possession of Bombay, the presidency of their affairs on the coast of Malabar was at Surat; and they had a factory here established under captain Best in 1611. The Great Mogul had here an officer who was styled his admiral. An attack of the Mahratta chief Sivajee, on the British factory, was defeated by sir George Oxenden, 1664. The English were again attacked in 1670 and 1702, and often subsequently. The East India company, in 1759, fitted out an armament, which dispossessed the admiral of the castle; and, soon after, the possession of this castle was confirmed to them by the court of Delhi. Surat was vested in the British in 1800 and 1803. A fourth part of Surat was destroyed by fire 6, 7 April, 1889.

SURGEONS. Barbers and surgeons were united in one company in 1540; but it was enacted that "no person using any shaving or barbery in London shall occupy any surgery, letting of blood, or other matter, excepting only the drawing of teeth." In 1745 the surgeons and barbers of London were made distinct corporations. The college of surgeons obtained charters in 1745, 1800, and 1843 (when it was styled the "Royal College of Surgeons of England"), 1852 and 1859. Since that period, various legislative and other important regulations have been adopted to promote their utility and respectability; and no person is legally entitled to practise as a surgeon in the cities of London and Westminster, or within seven miles of the former, who has not been examined at this college. The college in Lincoln's-inn-fields was remodelled in 1836, and the interior completed in 1837. The premises were enlarged in 1852-3. The museum began with the Hunterian collection, 1800; and the library was founded in 1801. Centenary of the college celebrated, 26 July, 1900. Mrs. Mary Emily Dowson, the first lady surgeon duly qualified to act, was invested with the letters testimonial of the Irish college of surgeons, June, 1886. See *Anatomy*, *Physic*, and *Medical Council*.

Royal college of surgeons, Edinburgh, received its charter from James V. 1505; another received in 1778, and a fuller one, 1851; Dublin, incorporated, 1786.

SURGERY. It was not until the age of Hippocrates that diseases were made a separate study from philosophy, &c., about 410 B.C. Hippocrates mentions the *ambe*, the ancient instrument with which they reduced dislocated bones. Celsus flourished about A.D. 17; Galen, 170; Aëtius, 500; Paulus Ægineta, in 640. The Arabians revived surgery about 900; and in the 16th century a new era in the science began; between these periods surgery was confined to ignorant priests and barbers. Anatomy was cultivated under Vesalius, the father of modern surgery, in 1538. Surgeons and doctors were exempted from bearing arms or serving on juries, 1513, at which period there were only 13 in London; see *Physic* and *Photography*, 1896. For antiseptic treatment see *Germ Theory*. Great improvements in surgery in the 19th century reported by sir Joseph (aft. lord) Lister in his address to the British association at Liverpool, 16 Sept. 1896.

SURGICAL AID SOCIETY, founded 1862; supplies the poor with instruments, waterbeds, &c.

SURINAM (Dutch Guiana), discovered by Columbus, 1498. The factories established by the English in 1640 were occupied by the Portuguese, 1643; by the Dutch, 1654; taken by the British, 1799, 1804; and restored to the Dutch, 1802, 1814.

Plantation riot, Mavor the manager killed, troops fire on the rioters, 13 killed and 40 wounded, reported . . . . . 31 July, 1902

SURNAMES were introduced into England by the Normans, and were adopted by the nobility about 1100. The old Normans used *Fitz*, which signifies son, as Fitz-herbert. The Irish used O, for grandson, as O'Neal, O'Donnell. The Scottish Highlanders used Mac, as Macdonald, son of Donald. The Welsh used Ap, as Ap Rhys, the son of Rhys; Ap Richard. The prefix Ap eventually was combined with the name of the father, hence Prys, Pritchard, &c. The northern nations added the word son to the father's name, as Williamson. Many of the most common surnames, such as Johnson, Wilson, Dyson, Nicholson, &c., were taken by Brabanters and other Flemings, who were naturalised in the reign of

Henry VI., 1435. M A. Lower's "Dictionary of English Surnames" was published in 1860.

SURPLICES were first worn by the Jewish priests, and are said to have been first used in churches in the fourth century, and encouraged by pope Adrian, 786. "Every minister saying public prayers shall wear a comely surplice with sleeves," *Canon* 58. The garb prescribed by stat. 2 Edw. VI. 1547; again 1 Eliz. 1558; and 13 & 14 Chas. II. 1662.

SURREY CHAPEL, Blackfriars-road, was built for Calvinistic dissenters in 1783; the rev. Rowland Hill, their minister, who died in 1833, was buried in a vault here. The congregation under the rev. Seventeen widows have burnt themselves on the funeral pile of a rajah, and in Bengal alone, 700 have thus perished in a year. The English government, after long discouraging suttees, by the agency of lord William Bentinck, formally abolished them, 7 Dec. 1829; but they have since occasionally taken place. The wife of the son of the rajah of Beygoon thus perished, June, 1864, and several wives of sir Jung Bahadoor, minister of Nepaul, 1 March, 1877. Suttees still occur

Conradin, his descendant, was defeated at the battle of Taglıacozzo (*which see*), in 1268, and beheaded shortly after. The breaking up of the duchy gave rise to many of the small German states, part of Swabia is included in Würtemberg and Switzerland. Swabia was made a circle of the empire in 1387 and 1500. A league, composed of Swabian cities and states, about 1254, was the germ of the great Swabian league, formed for the preservation of the peace of Germany, under the auspices of the emperor Frederick, in 1488.

Lord Dunraven's motion for a select committee of inquiry was carried in the lords, 28 Feb.; archbishop of Canterbury, earl of Derby, and others appointed 9 March, 1888. SWEDEN (N. Europe). The ancient inhabitants were the Fins, now the modern inhabitants of Finland, who retired to their present territory on the appearance of the Scandinavians or Goths, who have ever since been masters of Sweden; see *Scandinavia*, and *Norway*, 1891. The internal state of this kingdom is little known previous to the 11th century. By the union of Calmar in 1397, Sweden became a province of Denmark, and was not wholly rescued from this subjection till 1521, when Gustavus Vasa recovered the kingdom from the Danish yoke. He became king in 1523, and his descendants ruled till 1809. The government of Sweden is a limited monarchy. The diet consists of four orders, the nobles, the clergy, the peasants, and the burghers, and meet every three years. The king is, as in Britain, the head of the executive. There are two

universities, Upsal and Lund; and Sweden can boast, among its great men, Linnæus, Celsius, Scheele, Bergman, Berzelius, Thorwaldsen, and Andersen. *Capital:* Stockholm (population, 1904, 317,964). SWEDENBORGIANS is the name given to those who adopt the theological teachings of Emanuel Swedenborg, but the organization these

have formed they call the New Church, or New Jerusalem Church.

Swedenborg was born in Stockholm, 29 January, 1688, died in London 29th March, 1772; interred in a vault of the Swedish church in Prince's-square, near the Tower of London.

Assessor in the Swedish Royal College of Mines, 1717–1747, with a seat in the Upper House of the Legislature.

Ennobled by queen Ulrica Eleanora, 1719.

Wrote many scientific and philosophical works, his *Principia, Economy of the Animal Kingdom*, &c., being published at the expense of the duke of Brunswick.

In 1743 he began his work as a theologian, writing *Arcana Cœlestia, Heaven and Hell, True Christian Religion, Divine Love and Wisdom, Divine Providence, Apocalypse Revealed, &c., &c.*

In London meetings of his followers began in 1783; they organised for public worship 1787.

Swedenborg Society for publishing his works founded 1810.

Missionary and Tract Society of the New Church, 1821.

National Missionary Institution, 1857.

New Church Orphanage, 1881.

In 1905 there were over 70 churches in Great Britain connected with the General Conference, and 9 independent congregations. In America there were 81 connected with the General Convention, and many important circles in affiliation. In Canada there were several places of worship, and others in Australia, New Zealand, and South Africa. Also in France, Germany, Austria, Hungary, Sweden, Denmark, &c.

Their belief is that the whole Godhead is centred in Jesus Christ, who is Father, Son, and Holy Spirit; Creator, Redeemer, and Saviour; one in essence and person; in whom is a Trinity of Love, Wisdom, and Power, answering to the trinity in man of soul, body, and their operation; that Salvation is effected by faith in Him and obedience to Him, the Lord operating with the man, and the man co-operating with the Lord, and that Charity and Faith are together in good works; that the Sacred Scripture is the Word of God or the Divine Truth itself, the literal sense being the basis and continent of a spiritual sense in all and every part, and that the word is in all the heavens and the wisdom of the angels is thence derived; that man is a spiritual being fitted for life in the spiritual world, clothed temporarily with a material body for life in this world, which at "death" he lays aside for ever; that the last Judgment was effected in the spiritual world during Swedenborg's lifetime; and that the Lord's Second Coming has taken place in the revelation to man by the Lord, through the instrumentality of Swedenborg, of a new system of truth derived from the inner or spiritual sense of Scripture, based upon the literal sense when properly understood, and having special application to the spiritual life and needs of man, here and hereafter.

SWEET-BAY, *Laurus nobilis*, was brought to these realms from Italy before 1548. *Laurus indica*, or Royal Bay, was brought from Madeira in 1665. The Sweet-Fern bush, *Comptonia asplenifolia*, came from America, 1714. *Laurus aggregata*, or the Glaucous Laurel, came from China in 1806.

He was said to have swum seven miles in about sixty-five minutes. "Swimming," by Archibald Sinclair and William Henry (Badminton Library), 1894, contains remarkable records.

SYLLABUS OF ERRORS in modern times. 80 paragraphs divided into 10 chapters, issued by pope Pius IX., with an encyclical letter, 8 Dec. 1864. It condemned heresy, modern philosophy, and liberalism in politics; was forbidden to be read in French churches, and was generally opposed, but was adopted by the council at Rome, 1870.

SYMPHONIES. Short pieces of instrumental music between songs in operas; early in the 17th century. These were gradually developed by the great masters, such as Lulli, into independent pieces; of these the symphonies of Corelli, Handel, Mozart, Haydn, and Beethoven are eminent examples.

Made unlawful to hold synods but by royal

authority, 25 Henry VIII. 1533; see *Dort* and *Thurles*.

SYNONYM, a word having the same or nearly the same meaning as another, as valour, courage. Books of Greek and Latin synonyms were early compiled. G. Crabbe's dictionary appeared, 1816; Dr. P. M. Roget's excellent "Thesaurus of English Words and Phrases," 1852.

TABERNACLE, the Holy Place of the Israelites, till the erection of Solomon's temple, was constructed by Divine direction, 1491 B.C. The tabernacle set up at Shiloh by Joshua, 1444 B.C. was replaced by the temple erected by Solomon, 1004 B.C. The chapel erected for George Whitefield in Moorfields in 1741, being of a temporary nature, received the name of Tabernacle, which was afterwards given to their chapels by the Calvinistic Methodists. Whitefield's Tabernacle in Tottenham-court-road was erected in 1756, and enlarged in 1760. His lease expired in 1828; the chapel was opened by the Independents in 1830, taken down in 1890, and a new chapel erected on the site. The large metropolitan tabernacle, erected for the ministrations of Rev. C. H. Spurgeon (died, 31 Jan. 1892), in Newington Butts, was opened on 31 March, 1861; burnt down, 20 April, 1898, rebuilt, 1899.

"TALISMAN" affair, see *Peru*, 1874-6.

TALKING-MACHINE, see *Automatons*.

TALLY OFFICE in the Exchequer took its name from the French word *tailler*, to cut. A tally is a piece of wood written upon both sides, containing an acquittance for money received; which, being cloven asunder by an officer of the exchequer, one part, called the stock, was delivered to the person who paid, or lent, money to the government; and the other part, called the counter-stock, or counter-foil, remained in the office, to be kept till called for, and joined with the stock. This manner of striking tallies is very ancient.—*Beatson*. The practice was ordered to be discontinued in 1782. See *Exchequer*. On 16 Oct. 1834, the houses of parliament were burnt down by too many of these tallies being used in heating the stoves in the house of lords.

TALMUD (from *lamad*, to teach), the compendium of ancient Jewish oral or unwritten law, as distinguished from the Pentateuch, or written law; its origin is coeval with the return from the Babylonish captivity, 536 B.C. Its compilation in Hebrew was begun by the Scribes, and by their successors the work was carried on till 220 B.C. It is composed in prose and poetry, and contains two elements, legal and legendary. The morality resembles that of the New Testament, and the philosophy is rather Platonic than Aristotelian.

The Mischna, comprising the work of the rabbis, termed Thanaim, was compiled by Jehuda Hanassi, in the middle of the second century, A.D., and forms the Jerusalem Talmud, written at Tiberias, in Palestine, about 230. The Babylonian Talmud contains also the Gemera or Ghemara, the work of the rabbis termed Amoraim, criticisms and comments on the Mischna. The part named *Halacha* is dogmatic, legal, and doctrinal; the *Agaba* is illustrative, narrative, and legendary.

After being almost universally condemned, and the MSS. often burnt, the defence of the Talmud was undertaken by the German reformer Reuchlin, in the 16th century, and between 1520 and 1523, the "Talmud Babylonicum," in 12 vols. fol., and the "Talmud Hierosolytanum," in one vol. fol., were printed at Venice. A discourse on the Talmud was given at the Royal Institution, 15 May, 1868, by Mr. Emanuel Deutsch, whose article in the "Quarterly Review," Oct. 1867, had attracted much attention.

Vol. I. of the first English translation of the Jerusalem Talmud by Dr. Moise Schwab, appeared in 1885; he had published part of a French translation.

After its failure he fled to Hamburg, and was there delivered up to the English, 24 Nov.; for which Bonaparte declared war upon Hamburg, 15 Oct. 1799. Tandy was liberated after the peace of Amiens in 1802.

TANGANYIKA, a lake of eastern central Africa, 420 miles in length, 15 to 80 miles in breadth. Discovered by Speke and Burton, 1858. The supposition that the lake belonged to the basin of the Nile was disproved by Livingstone and Stanley, 1871. Cameron, 1874, discovered an outlet, the Lukuga, on the west side of the lake, which Stanley, in 1876, proved to be a communication with the Lualaba or Upper Congo.

TANGIER (Morocco, N.W. Africa), besieged by prince Ferdinand of Portugal, who was beaten and taken prisoner, 1437. It was conquered by Alfonso V. of Portugal in 1471, and given as a dower to princess Catherine, on her marriage with Charles II. of England, 1662; who, in 1683, caused the works to be blown up, and the place abandoned. Tangier afterwards became a piratical station. See *Morocco*.

TANISTRY (in Ireland), the equal division of lands, after the decease of the owner, amongst his sons, legitimate or illegitimate. If one of the sons died, his son did not inherit, but a new division was made by the tanist or chief. Abolished 1604.

TANJORE (W. India). About 1678, Vencajee, a Mahratta chief, brother of the great Sevajee, made himself rajah. In 1749 a British expedition endeavoured to restore a deposed rajah without success; the reigning prince bought them off by the cession of territories. Much intervention ensued. In 1799 the company obtained possession of the country, engaging to support the rajah with nominal authority. The last is said to have died in 1855.

TANNENBERG (E. Prussia). Here Ladislaus V. Jagellon of Poland defeated the Teutonic knights with great slaughter, the grand master being among the slain, 15 July, 1410. The order never recovered from this calamity.

TANNHÄUSER, the name of one of Wagner's operas, founded on the German legend of the hero of that name.

TANNING leather with the bark of trees was early practised. Great improvements have been made in tanning by chemical processes.

TANTALUM, a rare metal, discovered in an American mineral by Hatchett, in 1801, and named by him columbium; and in a Swedish mineral by Ekeberg, who gave it its present name. Wollaston pointed out the identity of the two metals in 1809; and Berzelius prepared pure metallic tantalum in 1824. In 1846 Rose discovered that tantalum was really a mixture of three metals, which he named tantalum, niobium, and pelopium.—*Gmelin*.

TANZIMAT, see *Turkey*, 1839-44.

TAOISM, one of the three religions of China. The name is derived from the Tâo, or "Way," a treatise written by Li Urh, or Laou-tsze, a contemporary of Confucius in the sixth century B.C. The "Way" is the quiet, passionless discharge of all our duties, "Heaven" not being a ruler, but a pattern. Tâoism was modified by the introduction of Buddhism.

TAPESTRY. An art of weaving borrowed from the Saracens, and hence its original workers in France were called *Sarazinois*. The invention of tapestry hangings belongs [the date is not mentioned] to the Netherlands.—*Guicciardini*. Manufactured in France under Henry IV. by artists invited from Flanders, 1606. The art was brought into England by William Sheldon; and the first manufactory of it was established at Mortlake by sir Francis Crane, 17 James I. 1619.—*Salmon*. Under Louis XIV. the art of tapestry was much improved in France; see *Gobelin Tapestry*. Very early instances of making tapestry are mentioned by the ancient poets, and also in Scripture; so that the Saracens' manufacture is a revival of the art. For the tapestry said to have been wrought by Matilda queen of England, see *Bayeux Tapestry*.

Tapestry manufactory established at Windsor by Mr. H. Henry, supported by the royal family, and others; exhibition opened in the town-hall, 6 Dec. 1878; works said to be closed, June, 1892.

TAPIR, the American water-hog, a pachydermatous animal. The first born in England at Zoological Gardens, London, 12 Feb. 1882.

TAR. The chemist Becher first proposed to make tar from pit-coal; the earl of Dundonald's patent was granted 1781. The mineral tar was discovered at Coalbrookdale, Shropshire, 1779; and in Scotland, Oct. 1792. Tar-water was first recommended for its medicinal virtues by Dr. Berkeley, bishop of Cloyne, about 1744. From benzole, discovered in coal-tar, many brilliant dyes are now produced; see *Benzole*.

TARA, a hill in Meath, Ireland, where the early kings of Ireland were inaugurated. Near here, on 26 May, 1798, the royalist troops, 400 strong, defeated the insurgent Irish (4000 men), 500 killed. On 15 Aug. 1843, Daniel O'Connell held a monster meeting here (250,000 persons said to have been assembled).

TARBES (S. France, near the Pyrenees), capital of Bigorre, the property of the English kings in the middle ages. The French, under Soult, were forced from their position at Tarbes, with considerable loss, by the British army commanded by Wellington, 20 March, 1814. See *Toulouse*.

TARENTUM (now *Taranto*, S. Italy), was founded by the Greek Phalantus, B.C. 708. The people of Tarentum assisted by Pyrrhus, king of Epirus, supported a war which had been undertaken B.C. 281 by the Romans, to avenge the insults the Tarentines had offered to their ships when near their harbours; it was terminated after ten years; 300,000 prisoners were taken, and Tarentum became subject to Rome. Except the citadel, Tarentum was captured by Hannibal, 212, but recovered by Fabius, 209 B.C. Tarentum has shared in the revolutions of Southern Italy, and only ruins remain.

TARGUMS or EXPLANATIONS, names given to certain ancient Chaldee paraphrases of the Old Testament. The most remarkable are those of

Onkelos, Jonathan-ben-Uzziel, and Joseph the Blind. The Targum of Onkelos is referred by some writers to the first century A.D.

TARIFA (S. Spain), the ancient Joza and Julia Traducta, where Muza landed when invading Spain, 712. It was taken from the Moors by Sancho IV. of Castile, 1291 or 1292; and was relieved, when besieged by them, after a great victory over the kings of Morocco and Granada, by Alfonso XI. of Castile and Alfonso IV. of Portugal, 28 or 30 Oct. 1340. The conflict is called the battle of Salado, having been fought on the banks of that river. Tarifa was taken by the French in 1823.

TARIFF (said to have been derived from Tarifa, where duties were formerly collected), a book of duties charged on goods exported or imported. Our tariff in 1840 comprised 1042 articles; the number was reduced (by sir Robert Peel) in 1845 and 1847. It comprised 439 articles in 1857; this number was greatly reduced in 1860. For Mr. McKinley's tariff bill, see *United States*, Oct. 1890.

TARIFF REFORM LEAGUE, inaugurated 21 July, 1903, for the employment of the tariff with a view to its use to consolidate and develop the resources of the Empire, and to defend the industries of the United Kingdom. The league, which is independent of political parties, carries on its propaganda by means of meetings, lectures, and literature on the subject; it also supports members of parliament and parliamentary candidates who are in favour of tariff reform. Branches of the league have been formed in every constituency in England and Wales, with the exception of the counties of Worcestershire, Warwick, Shropshire, and Staffordshire, which form the area worked by the Imperial tariff committee at Birmingham. President of the league, the duke of Sutherland. Sec., J. Ratcliffe Cousins; office, 7, Victoria-street, Westminster, S.W.

TARPEIAN ROCK (Rome), owed its name to the tradition that Tarpeia, daughter of Tarpeius, the keeper of the Roman citadel, was here crushed to death by the shields cast on her by the Sabines, whom she treacherously admitted, having bargained for the gift of what they wore on their left arms, meaning their bracelets; about 750 B.C.

TARRAGONA (N.E. Spain), occupied as a naval station by the British before their capture of Gibraltar in 1704. It was stormed and sacked by the French under Suchet, 29 Jan. 1811, and the inhabitants put to the sword. Population, 1887, 27,225.

TARTAN or **HIGHLAND PLAID**, the dress of the Scottish Highlanders, said to have been derived from the ancient Gauls, or Celtæ, the *Galli non braccati*.

TARTARIC ACID is said to have been the first discovery of the eminent chemist, Scheele, who procured it in a separate state by boiling tar with lime, and in decomposing the tartrate of lime thus formed by means of sulphuric acid, about 1770. In 1859 baron Liebig formed tartaric acid from other sources.

TARTARY, a name given in the middle ages to a part of Central Asia and Eastern Europe, see *Turkestan* and *Crimea*. The Tatars, or Tartars, or Mongols, or Moguls, were known in antiquity as Scythians. During the decline of the Roman empire, these tribes began to seek more fertile regions; and the first who reached the frontier of Italy were the Huns, the ancestors of the modern Mongols. The first acknowledged sovereign of this vast country was the famous Genghis Khan. His empire, by the conquest of China, Persia, and all central Asia (1206-27), became one of the most formidable ever established; but it was split into parts in a few reigns. Timur, or Tamerlane, again conquered Persia, broke the power of the Turks in Asia Minor (1370-1400), and founded the Mogul dynasty in India, which began with Baber in 1525, and formed the most splendid court in Asia till the close of the 18th century; see *Golden Horde*. The Calmucks, a branch of the Tartars, expelled from China, settled on the banks of the Volga in 1672, but returned in 1771, and thousands perished on the journey.

TAUNTON (Somerset) was taken by Perkin Warbeck, Sept. 1497; and here he was surrendered to Henry VII. 5 Oct. following. The duke of Monmouth was proclaimed king at Taunton, 20 June, 1685; and it was the scene of the "bloody assize" held by Jeffreys upon the rebels in August. The castle restored and a fine museum opened by lord Cork, 21 May, 1902. Population, 1881, 16,614; 1891, 18,026; 1901, 21,078.

TAVERNS may be traced to the 13th century. "In the raigne of king Edward the Third, *only three taverns* were allowed in London: one in Chepe, one in Walbrok, and the other in Lombard-street."—*Spelman*. The *Boar's Head*, in East-cheap, existed in the reign of Henry IV., and was the rendezvous of prince Henry and his dissolute companions. Shakspeare mentions it as the residence of Mrs. Quickly, and the scene of Falstaff's merriment.—*Shakspeare*, "Henry IV." The *White Hart*, Bishopsgate, established in 1480, was rebuilt in 1829. Taverns were licensed in 1752.

Taverns were restricted by 7 Edward VI. 1552-3, to 40 in London, 8 in York, 4 in Norwich, 3 in Westminster, 6 in Bristol, 3 in Lincoln, 4 in Hull, 3 in Shrewsbury, 4 in Exeter, 3 in Salisbury, 4 in Gloucester, 4 in Chester, 3 in Hereford, 3 in Worcester, 3 in Southampton, 4 in Canterbury, 3 in Ipswich, 3 in Winchester, 3 in Oxford, 4 in Cambridge, 3 in Colchester, 4 in Newcastle-upon-Tyne.

TAXES were levied by Solon, the Athenian legislator, about 594 B.C. The first class of citizens paid an Attic talent of silver, about 55*l.* of our money. Darius, the son of Hystaspes, levied a land-tax by assessment, which was deemed so odious that his subjects styled him, by way of derision, Darius the Trader, 480 B.C.—*D'Eon*. Taxes in specie were first introduced into England by William I., 1067, and he raised them arbitrarily; yet subsidies in kind, as in wool, leather, and other products of the country, continued till the accession of Richard II., 1377.—*Camden*; see *Revenue* and *Income Tax*. "TAXES ON KNOWLEDGE" (see *Advertisement*

Duty, Newspaper Stamp, and *Paper Duty*). For his exertions in repealing these, a testimonial was presented to Mr. T. Milner Gibson in 1861.* The *assessed* taxes now include *land tax, house duty*, and *property* and *income tax*. The Taxes Management act, 43 & 44 Vict. c. 19, passed 6 Aug. 1880 (see below). Mr. Stephen Dowell's "History of Taxation and Taxes in England," published in 1884-8. The elder Wm. Pitt, in his great speech on the Stamp act imposed on the colonies without their consent, 1765—66, said that taxation and representation should go hand in hand. See *Stamp Duties*. The Statistical Abstract published annually by the government gives much information respecting taxation, revenue, and expenditure for 15 years. TCHERNAYA, a river in the Crimea. On 16 Aug. 1855, the lines of the allied army at this place were attacked by 50,000 Russians under prince Gortschakoff, who was repulsed with the loss of 3329 slain, 1658 wounded, and 600 prisoners. The brunt of the attack was borne by two French regiments under general D'Herbillon. The loss of the allies was about 1200; 200 of these were from the Sardinian contingent, which behaved with great gallantry, under the command of general La Marmora. The Russian general Read, and the Sardinian general Montevecchio, were killed. The object of the attack was the relief of Sebastopol, then closely besieged by the English and French.

TE DEUM, a song of praise used by the Romish and English churches, beginning "*Te Deum Laudamus*—We praise thee, O God," supposed to be the composition of Augustin and Ambrose, about 390. The original music is very ancient.

TEETOTALER, a term applied to an abstainer from all fermented liquors, originated with Richard Turner, an artisan of Preston, who, contending for the principle at a temperance meeting about Sept. 1833, asserted "that nothing but *te-te-total* will do." The word was immediately adopted. He died 27 Oct. 1846. These facts are taken from the "Staunch Teetotaler," edited by Joseph Livesey, of Preston (an originator of the movement in 1832, he died, aged 90, 2 Sept. 1884), Jan. 1867. TELEGRAPHONE; a development of the telephone and phonograph invented by Mr. Poulsen, a Dane, by which the voice may be directed to any number of points simultaneously. *Nature*, 17 May, 1900; another by Mr. Kumberg, reported, 27 Oct. 1900.

TELEGRAPHS (from the Greek, *tele*, afar, and *graphe*, I write). Æschylus, in his Agamemnon

(B.C. 500), describes the communication of intelligence by burning torches as signals. Polybius, the Greek historian (who died about 122 B.C.), calls the different instruments used by the ancients for communicating information, *pyreiæ*, because the signals were always made by fire. In 1663, a plan was suggested by the marquis of Worcester, and a telegraph was suggested by Dr. Hooke, 1684. M. Amontons is also said to have been the inventor of telegraphs about this period. James II., while duke of York, originated a set of navy signals, which were systematised by Kempenfeldt in 1780; and a dictionary was compiled by sir Home Popham. M. Chappe then invented the telegraph first used by the French in 1792, and two were erected over the Admiralty-office, London, 1796. The semaphore was erected there 1816. The naval signals by telegraph enabled 400 previously concerted sentences to be transmitted from ship to ship, by varying the combinations of two revolving crosses. Baron Reuter's telegraph agency founded at Aix la Chapelle, 1851. Acts relating to telegraphs were passed in 1863 and 1866. The telegraph act, passed 31 July, 1868, enabled the postmaster-general to purchase existing electric telegraphs (not less than *1s.* for a telegram, 20 words). Mr. Scudamore was appointed director, Jan. 1872. The principle of a 6*d.* telegram adopted by the commons, 29 March, 1883, and enacted to come into operation 1 Oct. 1883, deferred; bill introduced by Mr. Shaw-Lefevre 30 March; act passed 14 Aug.: came into operation 1 Oct. 1885. Another telegraph act passed 28 June, 1892, and 1899. See *Telephone*. Great destruction of telegraph posts and wires by gale and snowstorm; London streets blocked by fallen wires 26-27 Dec. 1886. The Society of Telegraph Engineers founded 1871; held first general meeting, 28 Feb. 1872, Chas. Wm. Siemens, president; incorporated 1883. Present title "Institution of Electrical Engineers." The United States bureau of statistics prepared in 1902 a monograph, which showed that the submarine telegraph cables of the world numbered 1,750, with an aggregate length of about 200,000 miles, constructed at an estimated cost of 55,000,000*l.*, the number of messages transmitted over them annually exceeds 6,000,000.

For wireless telegraphy, see *Electricity*.

TELEKOUPHONON, or speaking telegraph, consisted of piping of gutta percha, caoutchouc, glass, or earthenware, with a terminal mouthpiece of ivory, bone, wood, or metal. It was used for dockyards and large establishments. It was described before Francis Whishaw at the meeting of the British Association at Swansea August, 1848.

TEL-EL-KEBIR, Egypt, the site of the entrenched camp of the rebel general, Arabi Pasha, his force being about 17,500 regular infantry, 2500 cavalry, 6000 Bedouins and other irregulars, and 70 guns; captured by the British 13 Sept. 1882.

Sir Garnet Wolseley broke up his camp at Ismailia on the night of 12 Sept. and began his advance at 1.30 a.m., his force being about 11,000 infantry, 2000 cavalry, and 40 guns; the troops marched rapidly in the dark. At daybreak they arrived at the camp. The surprised Egyptians filled the trenches and fought well under cover; but when the British scaled the parapets, they at first resisted bravely, but afterwards fled, being hotly pursued by the British cavalry, leaving all their guns, ammunition, &c., in the hands of the victors. Thousands were killed or made prisoners. Arabi Pasha fled towards Cairo. Arabi Pasha's army was completely broken up, and the British entered Cairo the next day, 14 Sept. British killed about 52, and 380 wounded; Egyptian killed and wounded about 1500. The Highlanders bore the brunt of the action.

TELEMETER, &c., an instrument for determining the distance between a gun and the object fired at. Lieut. von Ehrenberg and major Montaudon, in Baden, constructed a telemeter the size of a watch, by which the distance is determined and shown on a dial by the action of sound, 1878-85. *Teletopometer*, another apparatus for ascertaining the distance from point to point, invented by Dr. Luigi Cerebotani, was announced in Sept. 1885; two telescopes are employed.

TELEPATHY, "the supersensory transference of thoughts and feelings from one mind to another"; the principal subject of "Phantasms of the Living," edited by Messrs. Edmund Gurney, Frederic Myers, and Frank Podmore, and issued by the society for psychical research about 30 Oct. 1886. See *Psychology*, 1897.

TESTAMENT, see *Bibles* and *Wills*.

TESTER, *testone*, a silver coin struck in France by Louis XII. 1513; and also in Scotland in the time of Francis II. and of Mary, queen of Scots, 1559. It was so called from the head of the king, stamped upon it. In England the tester was of 12*d*. value in the reign of Henry VIII., afterwards 6*d*.

TESTRI (N. France). Pepin d'Heristal, invited by malcontents, here defeated and captured Thierry III., king of Austrasia, and established himself as duke, 687.

TETTENHALL (Staffordshire). It was probably at this place, then named Teotenheal, that the Danes were defeated by the Saxon king, Edward the Elder, 6 Aug. 910.

TETUAN (Morocco) was entered by the Spaniards 6 Feb. 1860, after gaining a decisive victory on 4 Feb. The general O'Donnell was made a grandee of the first class.

TEUTOBERG FOREST (the Teutobergiensis saltus, *Tacitus*), probably situate between Detmold and Paderborn, where Hermann, or Arminius, and the Germans defeated the Romans under Varus, with very great slaughter, A.D. 9. Varus and many of his officers preferred suicide to captivity. This defeat was regarded at Rome as a national calamity, and Augustus, in agony, cried, "Varus, give me my legions!"

TEUTONES, a people of Germany, who with the Cimbri made incursions upon Gaul, and cut to pieces two Roman armies, 113 and 105 B.C. They were at last defeated by the consul Marius at Aix, and a great number made prisoners, 102 B.C. (see *Cimbri*), with whom authors commonly join the Teutones. The appellation came to be applied to the German nation in general (hence *Deutsche*).

TEUTONIC ORDER, military knights established in the Holy Land about 1191, through the humanity of the Germans (Teutones) to the sick and wounded of the Christian army in the Holy Land, under Guy of Lusignan, before Acre. The order was confirmed by a bull of pope Cœlestine III. On their return to Germany, the knights were invited to subdue and christianise the country

now called Prussia and its neighbourhood, which they gradually accomplished. Their territories were invaded, and their army was defeated, with great slaughter, near Tannenberg, in East Prussia, by Jagellon, duke of Lithuania, 15 July, 1410, when the grand master and many of the knights were slain. A large part of their possessions was incorporated into Poland in 1466, and into Brandenburg about 1521. In 1525, the grand master was made a prince of the empire, and the order much weakened. Its remaining possessions were seized by Napoleon I. in 1809. Marienburg castle (about 1274) and chapel restored and dedicated by the emperor, 5 June, 1902. See *Prussia*, &c.

TEWKESBURY (Gloucestershire), where Edward IV. gained a decisive victory over the Lancastrians, 4 May, 1471. Queen Margaret, the consort of Henry VI., was taken prisoner, and her son killed. The queen was conveyed to the Tower of London, where king Henry expired soon after this fatal engagement; being, as is generally supposed, murdered by the duke of Gloucester, afterwards Richard III. The queen was ransomed in 1475 by the French king, Louis XI., for 50,000 crowns. Population, 1881, 5,100; 1891, 5,269; 1901, 5,500.

The *abbey*, founded by Robert Fitz-Hamon, cousin of William I., completed and consecrated 1123; grandly altered, 14th century; a monastery destroyed by Henry VIII.; the abbey spared; restored by G. G. Scott, 1877-9.

TEXAS (N. America) was settled by the French, 1687, who were expelled soon after. It revolted from Mexico in 1835; was helped by the Americans in 1836. Its independence was acknowledged in 1840. Its proposed annexation led to war between Mexico and the United States. It was admitted into the Union by the latter in 1845; seceded from it in 1861; submitted in 1865; re-admitted to state rights, March, 1870. The coast was desolated by a great storm, 15-18 Sept. 1875. Population 1880, 1,591,749; 1890, 2,235,523; 1900, 3,048,710; capital, Austin. See *Storms*.

TEXEL (at the mouth of the Zuyder Zee, Holland). Its vicinity has been the scene of memorable naval engagements. An engagement between the English under Blake, Dean, and Monk, and the Dutch under Van Tromp and De Ruyter, in which the latter were worsted and admiral Van Tromp was killed, 31 July, 1653. Again, in the mouth of the Texel a sharp indecisive action took place between the allied English and French fleets under prince Rupert and comte d'Estrées, and the Dutch fleet under De Ruyter, 11 Aug. 1673. The Dutch fleet was vanquished by admiral Duncan on 11 Oct. 1797; see *Camperdown*. The Dutch fleet of 12 ships of war and thirteen Indiamen surrendered to admiral Mitchell, who, entering the Texel, possessed himself of them without firing a shot, 30 Aug. 1799.

THAMES EMBANKMENT: recommended by sir Christopher Wren, 1666, and by Wm. Paterson, founder of the bank of England, about 1694. The corporation embanked a mile in 1767. It was further recommended by Gwynne, 1767; by sir Frederick Eden, 1798; by sir Frederick Trench, 1824; by James Walker; by the duke of Newcastle, 1844; and by John Martin the painter, 1846. In 1860, the Metropolitan Board of Works recommended that the north bank of the Thames should be embanked, whereby the bed of the river would be improved; a low-level sewer could be easily constructed beneath a broad roadway; docks to be constructed within the embankment wall; the expense to be defrayed by the city duties on coal, and by means provided by government. The principle of this recommendation was approved by parliament, and a committee was appointed, which sat for the first time, 30 April, 1862

THEATINES, a religious order, the first who assumed the title of regular clerks, founded by Caraffa, bishop of Theate, or Chieti, in Naples (afterwards pope Paul IV.), 1524, to repress heresy. They first established themselves in France, according to Hénault, in Paris, 1644. The Theatines vainly endeavoured to revive among the clergy the poverty of the apostles.

THEATRE (Greek *theatron*, "a place for seeing"). Greek theatres for the exhibition of the drama and musical performances were gradually developed from the ring in which songs and dances were performed in honour of Dionysus or Bacchus. Greek theatres are well described and illustrated in Mr. Robert W. Lowe's article, *Theatre*, in Chambers's Encyclopædia, 1892. The theatre of Dionysus at Athens could contain 30,000 spectators, and that at Megalopolis (*which see*), 44,000. The revival of the drama in the 16th century led to the construction of modern theatres on Greek models such as that at Rome by Bramante, 1513; the *Teatro Olimpico* at Vicenza, by Palladio, 1584. "Modern Opera Houses and Theatres," by Edwin O. Sachs, Vol. II., published Jan. 1896. *See Amphitheatres, Comédie Française*, and *Opera*.

THEATRES IN ENGLAND. The first royal licence for a theatre in England was in 1574, to master Burbage and four others, servants of the earl of Leicester, to act plays at the Globe, Bankside. It is stated the first play-house in London was erected at Shoreditch, and called the "Theatre" in 1576, and that the Curtain near it, was erected in 1577. The Blackfriars was built in 1596. The other London theatres in Elizabeth's reign were Whitefriars, Rose, Hope, Swan, Red Bull, Cockpit or Phœnix, and several others. Shakespeare and his fellow actors erected the Globe theatre on Bankside, about 1594. The prices of admission are said to have been—gallery, *2d.*; lords' rooms, *1s.*; see *Drama, Drury Lane*, and other theatres. The theatres were closed by parliament, 1642-60.

The first play-bill was dated 8 April, 1663, and issued from Drury-lane, it runs thus "By his Majestie his company of Comedians at the New Theatre in Drary-lane, will be acted a comedy called the *Humourous Lieutenant*" After detailing the characters, it concludes thus "The play will begin at three o'clock exactly" . . 8 April, 1663

THELLUSSON'S WILL, a most singular document. Mr. Peter Isaac Thellusson, a Genevese and an affluent merchant of London, left 100,000*l.* to his widow and children; and the remainder of his property, more than 600,000*l.*, he left to trustees, to accumulate during the lives of his three sons, and the lives of their sons; then the estates, directed to be purchased with the produce of the accumulated fund, were to be conveyed to the eldest lineal male descendant of his three sons, with the benefit of survivorship. Should no heir then exist, the whole was to be applied, by the agency of the sinking fund, to the discharge of the national debt. It is said that Mr Thellusson held much property in trust, and that he desired a sufficient interval of time to elapse for the appearance of just claimants. He died 21 July, 1797. His will incurred much public censure, and was contested by the heirs-at-law, but finally established by a decision of the house of lords, 25 June, 1805. The last surviving grandson died in Feb. 1856. A dispute then arose whether the eldest male descendant or the male descendant of the eldest son should inherit the property. The question was decided on appeal by the house of lords (9 June, 1859), in favour of the latter, lord Rendlesham and Charles S. Thellusson confirming the decision of the Master of the Rolls in 1858. In consequence of the legal expenses the property is said not to exceed greatly its value in the testator's lifetime. On 28 July, 1800, the Thellusson act was passed, restraining testators from devising their property for purposes of accumulation for longer than 21 years after death; any other direction to be void.

Luther is said to have placed the work next to the Bible and St. Augustin.

THEOLOGY (from the Greek *Theos*, God) the science which treats of the nature and attributes of God, of his relations to man, and of the manner in which they may be discovered. It is generally divided into two heads 1. *Inspired*, including the Holy Scriptures, their interpretation, &c. 2. *Natural*, which lord Bacon calls the first part of philosophy. — Butler's "Analogy of Religion" (1736) and Paley's "Natural Theology" (1802) are eminent books on the latter subject.—Abelard (died 1142) wrote "Theologia Christiania." The "Summa Totius Theologiæ" by Thomas Aquinas (born about 1224), a standard Roman catholic work was printed with commentaries, &c., in 1596. THIMBLES are said to have been found at Herculaneum, and long ago used by the Chinese. Their invention in Europe is traditionally ascribed to Nicolas van Benschoten, of Amsterdam, in the 17th century. The art of making them was brought to England by John Lofting, a mechanic, from Holland, who set up a workshop at Islington, near London, and practised the manufacture in various metals with profit and success, about 1695.

It successfully resisted the marquis de Feuquières in 1637, but was taken after four months' siege by the duc d'Enghien, 10 Aug. 1643, and remained with France. THOMISTS, see *Scotists*.

THOMITES or **TOMITES**, a body of enthusiasts who assembled at Boughton, near Canterbury. An insane Cornish publican named John Nicholls, called Thom, or Tom, assumed the name of sir W. Courtenay, knight of Malta and king of Jerusalem, came into Kent, was an unsuccessful candidate for parliament, and incited the rabble against the Poor Law act. On 31 May, 1838, a farmer of the neighbourhood, whose servant had joined the crowd which attended Thom, sent a constable to fetch him back; but on his arrival on the ground he was shot dead by Thom. The military were then called out, and lieut. Bennett proceeded to take the murderer into custody; but Thom advanced, and, firing a pistol, killed the lieutenant on the spot.

* Some Scottish historians make the origin of this order very obscure. The abbot Justinian says it was instituted by Achaius I. of Scotland, &c., when that monarch made an alliance with Charlemagne, and then took for his device the thistle. It is stated that the king Hungus, the Pict, had a dream, in which St. Andrew made a midnight visit, and promised him a sure victory over his foes, the Northumbrians; and that the ninth day St. Andrew's Cross (✕) appeared in the air, and the Northumbrians were defeated. On this story, it is said, Achaius framed the order more than 300 years before James V.

One of the soldiers fired at Thom, and laid him dead by the side of lieut. Bennett. The people then attacked the military, who were compelled to fire, and eight more persons were killed before the mob dispersed.

THRASHING-MACHINES. The flail was the only instrument formerly in use for thrashing corn. The Romans used a machine called the *tribulum*, a sledge loaded with stones or iron, drawn over the corn-sheaves by horses. The first machine attempted in modern times was invented by Michael Menzies, at Edinburgh, about 1732; Andrew Meikle invented a machine in 1776. Many improvements have been since made, and steam is employed. An act for the prevention of accidents by these machines was passed in 1879.

THUMB-SCREW, an instrument used in the first stages of torture by the Spanish inquisition. In Great Britain, rev. Wm. Carstares, a presbyterian minister, was the last who suffered by it, before the Scotch privy council, to make him divulge secrets entrusted to him, which he firmly resisted. After the revolution in 1688, the thumb-screw was presented to him by the council. King William expressed a desire to see it, and tried it on, bidding the doctor to turn the screw; but, at the third turn, he cried out "Hold—*hold*' doctor: another turn would make *me* confess anything."

TIMES NEWSPAPER. On 1 Jan. 1785, Mr. John Walter published the first number of the *Daily Universal Register*, price 2½*d.*, printed on the logographic system (invented by Henry Johnson, a compositor), in which types containing syllables and words were employed instead of single letters.

On 1 Jan. 1788, the paper was named the *Times*.
In 1803, when Mr. John Walter gave up the paper to his son John, the circulation was about 2000; that of the *Morning Post* being 4500.
Mr. John Walter (I.), born, 1739; died, 16 Nov. 1812.
Dr. Stoddart (satirised as Dr. Slop by Moore the poet) became editor in 1812, but five years after retired and set up in opposition the *New Times*, an unprofitable speculation. Thomas Barnes became next editor He died 7 May, 1841, and was succeeded by his assistant John Thaddeus Delane (son of W. F. A. Delane, financial manager) who retired in 1877, and died 22 Nov. 1879.
On 28 Nov 1814, the *Times* was first printed by steam power (the invention of F König), 1100 per hour, afterwards increased to 2000 and 4000.
It is asserted that the *Times* was termed the "*Thunderer*" in consequence of an article by Edward Sterling in which are the words, "We thundered forth articles on reform, &c." when Barnes was editor.
On 19 Jan. 1829, the first double number appeared
In July, 1834, an attack of Mr O'Connell in the house of commons on the correctness of the reports of the debates in the *Times* was signally defeated
Shortly after began the convenient summary of the debates, written in the first instance by Mr Horace Twiss.
In 1841 the *Times* was instrumental in detecting and exposing a scheme organised by Allan George Bogle and others, to defraud by forgery all the influential bankers of Europe This brought on the proprietors an action for libel (in the case Bogle v. Lawson) The jury found the charge to be true, giving a verdict of *one farthing* damages, but the judges refused costs Subscriptions were set on foot at the Mansion-house and in all parts of Europe to reimburse the proprietors for the immense outlay in defending the action. This they firmly declined, and the money was expended in establishing *Times Scholarships* at Oxford and Cambridge, and at Christ's Hospital, and other schools, a marble tablet also commemorating the event, was set up in the Royal Exchange and at the *Times* office. These were the greatest honours ever conceded to a newspaper
In Oct. 1845, the *Times* express was for the first time conveyed to India overland, by the agency of lieut Waghorn
Of the number of the *Times* containing the life of the duke of Wellington for 19 Nov 1852, 70,000 were sold – the ordinary number being then 36,000, the circulation is stated to vary from 50,000 to 60,000 (1868).
The *Times* (a slip) announcing permission to relax restriction of issue of bank-notes, published 24 Oct. 1847
Mr. John Walter (II.) died 28 July, 1847
In 1854, the proprietors sent Mr W H Russell as their special correspondent to the seat of war in the Crimea; in 1857 to India.
Times Fund —On the 19th of Oct 1854, sir Robert Peel originated by a letter in the *Times* a subscription for the sick and wounded in the Crimean war, and in less than a fortnight 15,000*l.* were sent to the *Times* office to be thus appropriated. Mr Macdonald was sent out by the proprietors as special commissioner to administer the fund, from which large quantities of food and clothing were supplied to the sufferers, with inestimable advantage; see *Scutari* and *Nightingale*.
In Dec. 1858, the *Times* drew attention to the state of the houseless poor of London; and in a few days 8000*l* were subscribed for their relief
In 1851, 23,000,000 copies were sold; in 1857, 16,100,000; in 1859, 16,900,000; in 1860, 16,670,000

TIN. The Phœnicians traded with England for more than 1100 years before the Christian era. Under the Saxons, our tin mines appear to have been neglected; but under the Normans, they produced considerable revenues to the earls of Cornwall, particularly to Richard, brother of Henry III. A charter and various immunities were granted by Edmund, earl Richard's brother, who framed the Stannary Laws (*which see*), laying a duty on the tin. Edward III. confirmed the tinners in their privileges, and erected Cornwall into a dukedom, with which he invested his son, Edward the Black Prince, 1337. Since that time, the heirs-apparent to the crown of England, if eldest sons, have enjoyed it successively. Tin mines were discovered in Germany, which lessened the value of those in England, till then the only tin mines in Europe, 1240.—*Anderson.* Discovered in Barbary, 1640; in India, 1740; in New Spain, 1782; near Cape Town, Feb. 1903. England and Normandy were reunited under Henry, at the decease of William Rufus, who had already possessed himself of Normandy by a mortgage from his brother Robert, at his setting out for Palestine. Robert, on his return, recovered Normandy by an accommodation with Henry; but having afterwards quarrelled, Robert was defeated in the battle of Tinchebray, 28 Sept. 1106, and Normandy was annexed to the crown of England.—*Rymer's Fœdera.*

TITHES, or **TENTHS,** were commanded to be given to the tribe of Levi, 1490 B.C. (*Lev.* xxvii. 30). Abraham returning from his victory over the kings (*Gen.* xiv.), gave tithes of the spoil to Melchisedek, king of Salem, priest of the most high God (1913 B.C.); the first recorded instance of the payment of tithes. The next precedent in order of time is Jacob's vow at Bethel (*Gen.* xxviii. 22). In the early age of the Christian church they were given purely as alms, and were voluntary. The moral and religious duty of paying tithes was recognized and had become the custom of the church at the end of the 4th cent. Enjoined by the councils of Tours, 567; Rouen, 650; and subsequently Legal sanction to ecclesiastical customs by legislation of Charlemagne, 779 and 787, and payment of tithes enforced by legal penalties; abolished in France at the Revolution, 1789. Tenths were confirmed in the Lateran councils, 1215.—*Ruinaldo.* The payment of tithes appears to have been claimed by Augustin, the first archbishop of Canterbury, and to have been allowed by Ethelbert, king of Kent, under the term "God's fee," about 600.

The first mention of them in any English written law is a constitutional decree made in a synod strongly enjoining tithes, 786.

Laws of king Edgar attach a legal punishment to the neglect of the customary and religious duty of paying tithes, and provide means for their enforcement by temporal penalties, 970.

In England, in 1548, tithes were fixed at the rate of 2*s.* 9*d.* in the pound on rent; since then, many acts have been passed respecting them.

TOBACCO, *Nicotiana tabacum*, received its name from Tabacco, a province of Yucatan, New Spain; some say from the island of Tobago, one of the Caribbees; others from Tobasco, in the Gulf of Florida. It is said to have been first observed at St. Domingo, in Cuba, 1492; and to have been used freely by the Spaniards in Yucatan in 1520. Tobacco was either first brought to England in 1565, by sir John Hawkins; or by sir Walter Raleigh and sir Francis Drake, in 1586. It was manufactured only for exportation for some years. *Stow's Chron.* The Pied Bull inn, at Islington, is said to have been the first house in England where tobacco was smoked. In 1584 a proclamation was issued against it. James I. published "A Counterblaste against Tobacco," and the star-chamber ordered the duties to be 6s. 10d. per pound, 1614. The toleration granted was somewhat limited. It exempted persons who took the new oath of allegiance and supremacy, and made also a declaration against popery, from the penalties incurred by absenting themselves from church and holding unlawful conventicles; and it allowed the quakers to substitute an affirmation for an oath, but did not relax the provisions of the Test act (*which see*). The party spirit of the times checked the king in his liberal measures.

TONTINES, loans given for life annuities with benefit of survivorship, invented by Laurence Tonti, a Neapolitan. They were first set on foot at Paris to reconcile the people to cardinal Mazarin's government, by amusing them with the hope of becoming suddenly rich, 1653 *Voltaire*. Tonti died in the Bastile after seven years' imprisonment. Three Irish tontines in 1773-77 had 3,500 members; the last public tontine in England was in 1789. New York tontine association, founded 1790, was wound up 1870-78. A Mr. Jennings was an original subscriber for a 100*l.* share in a tontine company; and being the last survivor of the shareholders, his share produced him 3000*l* per annum. He died aged 103 years, 19 June, 1798, worth 2,115,244*l.*; see *Alexandra Park*.

By the termination of a tontine begun by M. Lafargue in 1791 to diminish the national debt the French government received 1,218,000 francs Dec 1898.

TOOLS. Many of the tools in common use are described and represented in Rosellini's magnificent work, "Monumenti dell' Egitto e della Nubia," 1832-44. The tools used by Bezaleel and Aholiab in the construction of the tabernacle, described in Exodus xxxi. and xxxv. B.C (1491), were doubtless Egyptian or Phœnician. In building Solomon's temple (1014-04) B.C., "there was neither hammer nor axe nor any tool of iron heard," the stone and other materials being previously prepared (1 Kings vi. 7). The invention of many tools is mythically ascribed to Daedalus, the Athenian artificer in the 14th century B.C. The multiplement invented by lord Wemyss combines many tools in a small compass, April, 1902.

TORBANEHILL MINERAL. Mr. Gillespie, of Torbanehill, granted a lease of all the coal in the estate to Messrs. Russell. In the course of working, the lessees extracted a combustible mineral of considerable value as a source of coal-gas, and realised a large profit in the sale of it as gas-coal. The lessor then denied that the mineral was coal, and disputed the right of the lessees to work it. At the trial in 1853 there was a great array of scientific men and practical gas engineers, and the evidence was most conflicting. One side maintained the mineral to be coal, the other that it was a bituminous schist. The judge set aside the scientific evidence, and the jury pronounced it to be coal. The authorities in Prussia have since pronounced it *not* to be coal. *Percy.*

The action of Fulton's torpedoes was successful in Britain 1805; but their use was declined by the government. Torpedo shells ignited by electricity were successfully employed in the war in the United States, 1861-5. On 4 Oct. 1865, Messrs. M'Kay & Beardslee tried them at Chatham before the duke of Somerset and others. An old vessel, the Terpsichore, was speedily sunk. Torpedoes, made by professor (aft. sir Frederick) Abel, of Woolwich, were tried in May, 1866. A torpedo invented by Mr. Wightman and an Austrian, tried and reported successful at Sheerness; an old hulk was sunk, 8 Oct. 1870. TORTURE was only permitted by the Romans in the examination of slaves. It was applied to heretics by the Roman catholic clergy, and was used in England as late as 1640 (when Archer, who took part in an attack on Laud's palace, was racked), and in Scotland until 1690. The trial by torture was abolished in Portugal, 1776; in France, by Louis XVI., in 1789; and in Sweden by Gustavus III., 1786. General Picton was convicted of allowing Louisa Calderon to be tortured in Trinidad, in accordance with the old law of the island, at his trials, 21 Feb. 1806, and 11 June, 1808.

TOUL, the Roman *Tullo Leucorum*, a fortified town on the Moselle, N.E. France, one of the most ancient in the empire. The city and diocese acquired great privileges from Charles the Simple, 925, when it was united with the German empire. It was reunited with France, 1552. The fortifications, begun in 1238, were rebuilt and enlarged in 1700, according to the plans of Vauban. After a vigorous resistance to the Germans, commencing 14 Aug. 1870, Toul surrendered with its garrison of 3000 men, 23 Sept., when the town was burning in twenty-three places. The Germans thus acquired an uninterrupted railway communication to Paris.

TOULON, the ancient *Telo Martius* (S. France), an important military port. It was taken by the constable of Bourbon, 1524, and by the emperor Charles V. in 1536. In 1707 it was bombarded by the allies, both by land and sea, by which almost the whole town was reduced to a heap of ruins, and several ships burned; but the allies were at last obliged to raise the siege. It surrendered 27 Aug. 1793, to the British admiral, lord Hood, who took possession both of the town and shipping, in the name of Louis XVII., under a stipulation to assist in restoring the French constitution of 1789. A conflict took place between the English and French forces, when the latter were repulsed, 15 Nov. 1793. Toulon was retaken by Bonaparte, 19 Dec., when great cruelties were exercised towards such of the inhabitants as were supposed to be favourable to the British.—A naval battle off this port was fought 11 Feb. 1744, between the English under Mathews and Lestock, against the fleets of France and Spain: in this engagement the brave captain Cornewall fell. The victory was lost by a misunderstanding between the English admirals. Mathews was afterwards dismissed for misconduct. Population in 1801, 101,178. See *Cholera*, 1884.

TOULOUSE, the ancient TOLOSA (S. France), founded about 615 B.C.; was the capital of the Visigothic kings in A.D. 419; and was taken by Clovis in 508. The dukes of Aquitaine resided here, 631-761. A university was established here, 1229, and a parliament, 1302. The Inquisition was established here to extirpate heretics, 1229. The troubadours, or rhetoricians of Toulouse, had their origin about 850, and consisted of a fraternity of poets, whose art was extended throughout Europe, and gave rise to the Italian and French poetry; see *Troubadours*. The allied British and Spanish army entered this city on 12 April, immediately after the BATTLE OF TOULOUSE, fought between the British Peninsular army under lord Wellington, and the French led by marshal Soult, 10 April, 1814. The French were forced to retreat, after twelve hours' fighting. Neither of the commanders knew that Napoleon had abdicated the throne of France. Population, 1880, 147,617; 1891, 148,220; 1901, 147,000.

It enjoyed great prosperity till the dreadful war of the Albigenses (*which see*), when the count Raymond VI. was expelled, and Simon de Montfort became count. At his death, in 1218, Raymond VII. obtained his inheritance. His daughter Jane and her husband, Alphonse (brother of Louis IX. of France), dying without issue, the county of Toulouse was united to the French monarchy in 1271. A large part of Toulouse destroyed by an inundation of the Garonne; St. Cyprien like a sepulchre; 23 June, 1875.

TOURAINE, the garden of France, was conquered by the Visigoths about 480. It was ceded to Geoffroy count of Anjou, 1044, and thus became the property of the Plantagenet kings of England. It was seized by Philip Augustus in 1203, and was made a duchy by John, 1360. It was finally united to the crown on the death of the duke of Anjou, 1584.

TOURNAMENTS, or **JOUSTS**, were martial sports of the ancient cavaliers. Tournament is derived from the French word *tourner*, "to turn round." Tournaments were frequent about 890; and were regulated by the emperor Henry I., about 919. Tournaments were introduced into England early in the 12th century; prohibited by Henry II., but revived by Richard I., his son. Solemn tournaments were held by Edward III., 25 Sept. 1389, in London; and 19 Jan. 1344, at Windsor; and by Richard II. in Smithfield, London, 10 Oct. 1389; and also by Henry VIII., in May 1513. The Lateran council published an article against their continuance in 1136. Henry II. of France, in a tilt with the comte de Montgomery, had his eye struck out, an accident which caused the king's death in a few days, 29 June, 1559. Tournaments were then abolished in France.—A magnificent feast and tournament, under the auspices of Archibald, earl of Eglintoun, took place at Eglintoun castle, 29 Aug. 1839, and the following week: many of the visitors (among whom was the late emperor of the French) assumed the characters of ancient knights, lady Seymour, afterwards duchess of Somerset, being the "Queen of Beauty." She died 14 Dec. 1884. Among the festivities at the marriage of prince Humbert, at Turin, was a tournament, 24 April, 1868. Tournaments held at the Agricultural hall, London, N. (for benefit of soldiers' widows, &c.), 21 June *et seq.* 1870. In Oct. 1880, these tournaments were organized by the Royal Military

Tournaments" for development of skill in arms in the army, and are held annually, now under the title "Royal Naval and Military Tournament."

TOURNAY (S. Belgium) was very flourishing till it was ravaged by the barbarians in the 5th century. It has sustained many sieges. Taken by the allies in 1709, and ceded to the house of Austria by the treaty of Utrecht; but the Dutch were allowed to place a garrison in it, as one of the barrier towns. It was taken by the French under general La Bourdonnaye, 8 Nov. 1792. Several battles were fought near Tournay in May, 1793, and May, 1794. Population, 1890, 35,403; 1900, 37,069.

TOURNIQUET (from *tourner*, to turn), an instrument for stopping the flow of blood into a limb, by tightening the bandage employed in amputations, is said to have been invented by Morelli at the siege of Besançon, 1674. J. L. Petit, in France, invented the screw tourniquet in 1718.

TOURS, an ancient city, central France, near which Charles Martel gained a great victory over the Saracens, and saved Europe, 10 Oct. 732, and from which he acquired the name of *Martel*, signifying *hammer*. This conflict is also called the battle of Poitiers. When Paris was invested by the Germans, M. Crémieux and several of the members of the French government of defence went to Tours, together with the representatives of foreign powers, 18 Sept. 1870. On 9 Oct. these were joined by Gambetta, minister of the interior, afterwards of war (who escaped from Paris by a balloon, 7 Oct.). In consequence of the defeat of the army of the Loire near Orleans, the government removed to Bordeaux, 11 Dec.

TOWERS. That of Babel, the first of which we read, built in the plains of Shinar (*Gen.* xi.) 2247 B.C.; see *Babel*. The Tower of the Winds at Athens, built 550 B.C. The Tower of Pharos (see *Pharos*), 280 B.C. The *round towers* in Ireland were the only structures of stone found at the arrival of the English, 1169, except some buildings in the maritime towns founded by the Danes. These towers are tall hollow pillars, nearly cylindrical, but narrowing towards the top, pierced with lateral holes to admit the light, and covered with conical roofs. Fifty-six of them still remain, from 50 to 130 feet high, see *Pisa*.

TOWER OF LONDON. The tradition that Julius Cæsar founded a citadel here (about 54 B.C.) is very doubtful. A royal palace, consisting of no more than what is now called the White Tower, which appears to have been first marked out by William the Conqueror, 1070, was commenced in 1078, and completed by his son, William Rufus, who, in 1098, surrounded it with walls and a broad deep ditch. Several succeeding princes made additions to it, and king Edward III. built the church. In 1638, the old White Tower was rebuilt; and under king Charles II. it was thoroughly repaired, 1680-5, and a great number of additional buildings made to it. Here are the Armoury, Jewel-office, and various other divisions and buildings of peculiar interest. Here took place many executions of illustrious persons, and many murders (king Henry VI., 1471; king Edward V. and his brother, 1485; sir Thomas Overbury, 1613). The armoury and 200,000 stand of arms, &c., were destroyed by fire, 30 Oct. 1841. The "New Buildings" in the Tower were completed in 1850. See *Blood*; for *Tower-Subways*, see *Thames*. The more recent constables of the Tower have been the duke of Wellington, lord Combermere, and sir John Burgoyne. Sir George Pollock, constable Oct. 1871, died 6 Oct. 1872; sir Wm. Gomm, 31 Oct. 1872, died 15 March, 1875; sir Charles Yorke, April, 1875, died 20 Nov. 1880; sir W. Fenwick Williams, April, 1881; genl. sir R. J. Dacres, Aug. 1881, died 6 Dec. 1886; lord Napier of Magdala, Dec. 1886, died 14 Jan. 1890; gen. sir Daniel Lysons, 3 March, 1890, died 29 Jan. 1898, aged 81; gen. sir Frederick C. Stephenson, 2 March, 1898.

Marriott, and others), to enquire into terms of occupation, facilities for purchase by tenants, rating, improvements, &c. The report issued 13 July, 1889, was stated to be a compromise.

Edward issued orders to give no quarter, and the most merciless slaughter ensued. Henry and his queen, Margaret, fled to Scotland; and Edward IV. was settled on the throne.

TOXOPHILITES (from *toxon*, a bow, and *philos*, a lover), a society established by sir Aston Lever in 1781. The Toxophilites formed a division of the Artillery Company about 1784-1803. In 1834 they took grounds in the inner circle of Regent's-park, and built the archery lodge. They possess a very curious piece of plate, given by Catherine, queen of Charles II., to be shot for by the Finsbury archers, of whom the Toxophilites are the representatives.

were published, 1833-41. The principal writers were the revs. Dr. E. Pusey, J. H. Newman, J. Keble, J. Froude, and I. Williams—all of the University of Oxford; see *Puseyism*. The tracts (specially No. 90, ascribed to rev. J. H. Newman) were condemned by the authorities at Oxford, 15 March, 1841.

TRACTION-ENGINES were used on common roads in London in 1860, but afterwards restricted. In Aug. 1862, one of Bray's traction-engines conveyed through the city a mass of iron which would have required 20 horses; see *Road-steamers* and *Railways*.

TRADE OF GREAT BRITAIN, see *Exports* and *Imports*. In 1861 the value of the two amounted to 377,017,522*l.*; in 1871 to 614,590,180*l.*; in 1875 to 655,551,900*l.*; in 1877, to 636,705,702*l.*; in 1879, 611,775,230*l.*; in 1881, 694,105,264*l.*, in 1883, 732,328,649*l.*; 1884, 685,986,152*l.*; 1885, 642,442,263*l.*; 1886, 618,822,935*l.*; 1888, 686,213,284*l.*; 1890, 748,944,115*l.*, 1901, 909,854,456*l.*; 1904, 922,153,944*l.* See *Commerce*.

TRADE AND PLANTATIONS, BOARD OF. Cromwell seems to have given the first notions of a board of trade in 1655 he appointed his son Richard, with many lords of his council, judges, and gentlemen, and about twenty merchants of London, York, Newcastle, Yarmouth, Dover, &c., to meet and consider by what means the trade and navigation of the republic might be best promoted. *Thomas's Notes of the Rolls.* Charles II., on his restoration, established a council of trade for keeping a control over the whole commerce of the nation, 1660; he afterwards instituted a board of trade and plantations which was remodelled by William III. This board was abolished in 1782, and a new council for the affairs of trade on its present plan was appointed, 2 Sept. 1786.

The parliamentary recommendation in 1880 to appoint a "minister of trade and commerce" was dropped by Mr Gladstone in March, 1881.

TRADES MUSEUMS. The formation of one was undertaken in 1853, jointly by the commissioners of the Great Exhibition of 1851, and the Society of Arts. The animal department was opened 17 May, 1855, when a paper on the mutual relations of trade and manufactures was read by professor E. Solly. The contents of this museum were removed to the South Kensington Museum, which was opened 24 June, 1857. The French "Conservatoire des Arts et Métiers" was established 1795.

TRADE, NATIONAL CHAMBER OF, inaugural meeting at Manchester, Mr. R. Thornton-Varley elected president (from 8,000 to 10,000 members), 24 Nov. 1897.

TRADES UNIONS defined as "continuous associations of wage-earners, for the purpose of maintaining or improving the conditions of their employment," were gradually formed after the repeal of the "combination laws" in 1825, to withstand the undue influence of capital and competition. As trades unions formed for maintaining the rate of wages, &c., are not recognised by law, a commission (including lord Elcho, Thomas Hughes, and others, with sir Wm. Erle as chairman) was appointed to enquire into their constitution, 14 Feb. 1867, and an act to facilitate their proceedings was passed 5 April following. Their reports were issued during the year, disclosing the existence of murderous practices, with great intimidation; see *Sheffield* and *Manchester*. An act to protect union funds from embezzlement was passed in 1869. A trade union act passed 29 June, 1871, amended by act passed 30 June, 1876. To counteract the influence of trades unions, the National Federation of Employers was formed Dec. 1873; see *Employers* and *Working-men*. Trades unions were legalised in France in 1884. Trades unions in the United States, previously local, were legalised in 1845, and were gradually consolidated and became very powerful. See *United States*. "History of Trade Unionism," published 1894, and "Industrial Democracy," by Sidney and Beatrice Webb, published 1897.

TRAFALGAR (Cape S. Spain), off which a great naval victory was gained by the British, under Nelson, over the combined fleets of France and Spain, commanded by admiral Villeneuve and two Spanish admirals, 21 Oct. 1805. The enemy's force was eighteen French and fifteen Spanish vessels, all of the line: that of the British, twenty-seven ships. After a protracted fight, Villeneuve and the other admirals were taken, and nineteen of their ships captured, sunk, or destroyed. Nelson was

killed, and admiral Collingwood succeeded to the command. Nelson's ship was the *Victory*; and his last signal was, "England expects every man will do his duty;" see *Nelson*. The day specially celebrated in London, 21 Oct. 1896 *et seq*. Centenary observed in London and throughout the country, 21 Oct. 1905. TRAFALGAR-SQUARE, London, begun 1829; completed 1845. TRAFFIC in the metropolis is now regulated by the Metropolitan Streets act, passed 20 Aug. 1867.

LONDON TRAFFIC ROYAL COMMISSION, appointed 1903 to inquire into the subject of metropolitan locomotion. Evidence was taken of the London County Council, and of witnesses from the municipal borough councils and other authorities in the vicinity of London who are interested in the question of metropolitan traffic, including the great railway companies and tube railway companies. The commission personally examined the means of transit existing in the chief cities of Europe and in the United States. A sub-commission of six members visited (Sept.-Oct.) New York, Boston, Philadelphia, and Chicago to investigate the methods adopted in these cities with special reference to the merits of subways and tube railways. The first of the 8 volumes containing the report of the royal commission issued, July 1905.

TRAINING SCHOOLS, begun by the National Society, 1811. One was founded at Battersea in 1840, by sir J. Kay Shuttleworth, and Mr. E. C. Tufnell; the latter, who was then in the Poor Law Commission, devoting a year's salary towards the expenses. Mr. Mann stated, in 1855, that there were about forty of these schools in different parts of the country.

TRAJAN'S COLUMN (in Rome), erected 114, by the Roman senate and people, to commemorate his victories, and executed by Apollodorus. It was built in the square called the *Forum Trajanum*; it is of the Tuscan order, and from its base, exclusive of the statue and pedestal, is 127½ feet high.

TRAM-ROADS. The name is probably derived from being made of *trams* or bars of wood; the statement that it was derived from Mr. Benjamin Outram (the father of sir James Outram, the Indian general), who improved the colliery railroads about 1800, is very doubtful. The iron tram-road from Croydon to Wandsworth was completed on 24 July, 1801. The Preston Outram-way was opened 4 June, 1803. Street railways or tramways for omnibuses drawn by horses, previously established by Mr. Train in New York, were opened by him at Birkenhead, Cheshire, 30 Aug. 1860, and at Bayswater, London, 23 March, 1861. (See *Ireland*, 1868.) A street-railway bill was rejected by the house of commons in April, 1861. Several of these railways existed for a time in various parts of the metropolis in 1861, but were all taken up in 1862. An act to facilitate the construction of tramways passed 9 Aug. 1870. Tramways from Brixton to Kennington, and from Whitechapel to Bow, were opened 9 May, 1870; many others since. Their introduction into the city was much recommended but opposed, March-May, 1873, and since. The use of steam locomotives proposed: approved in Paris, July, 1876.

TRANSFIGURATION. The change of Christ's appearance on Mount Tabor, in the presence of Peter, James, and John, A.D. 32 (*Matt.* xvii.). The feast of the Transfiguration, kept on 6 Aug., was instituted in the East before 700, and seems to have been observed in the West as early as 950. Pope Calixtus III. in 1456 issued a bull making it a "feast of obligation" to be generally observed in honour of the defeat of the Turks at Belgrade in that year.

TRANSFORMATION PRINTS. A method of printing one picture over another, the former being easily effaced, patented by Mr. Andrew Reid of Newcastle-on-Tyne, and others, 1885.

TRANSLATION TO HEAVEN. The translation of Enoch to heaven at the age of 365 years (*Gen.* v. 24). The prophet Elijah was translated to heaven in a chariot of fire (2 *Kings* ii. 11).—The possibility of translation to the abode of eternal life has been maintained by some extravagant enthusiasts. The Irish house of commons expelled Mr Asgill from his seat, for his book asserting the possibility of translation to the other world without death, 1703.

TRANSPADANE REPUBLIC, comprising Lombardy and part of the Venetian territories, was established by Bonaparte after his victory at Lodi, 10 May, 1796. With the Cispadane republic, it merged into the Cisalpine republic, Oct. 1797.

TRANSPORTATION, see *Banishment*. Judges were given the power of sentencing offenders to transportation "into any of his majesty's dominions in North America," by 18 Charles II. c. 3 (1666), and by 4 Geo. I. c. 11 (1718). Transportation ceased in 1775, but was revived in 1786. The reception of convicts was successfully refused by the Cape of Good Hope (in 1849) and by the Australian colonies (1864). Transportation, even to West Australia, where labour is wanted, ceased after a few years, through the fierce opposition of the eastern colonies. In consequence of the difficulty then experienced in transporting felons, 16 & 17 Vict. c. 99 was passed to provide other punishment, namely, penal servitude, empowering the queen to grant pardon to offenders under certain conditions, and licences to others to be at large; such licences being liable to be revoked if necessary; and many have been. These licences are termed "tickets of leave." The system is said to have originated in Australia under the superintendence of captain Maconochie. It was much assailed in Oct. and Nov. 1862, on account of violent crimes being traced to *ticket-of-leavers*; and was modified by the Penal Servitude Act, 1864; and the Prevention of Crimes Acts, 1871 and 1879. It is now considered unsuccessful. See *Crime*.

John Ilyes, esq., a ward of Fortune, was sentenced to transportation for stealing a few quires of paper.—*Fielding* . . . 1 Nov. 1771

The Rev. Dr. Matthews, tutor to the earl of Chesterfield, was transported for forging a frank (real postage) . . . . . 9 Sept. 1801

The first transportation of felons to Botany Bay was in May, 1787; when governor Phillip arrived with about 600 on 20 Jan. 1788; convicts were afterwards sent to Van Diemen's Land, Norfolk Island, &c.

Transportation superseded by penal servitude . . 1853

Returning from transportation was punishable with death until 5 Will. IV c. 67, Aug. 1834, when an act was passed making the offence punishable by transportation for life.

A shipment of convicts to West Australia (which had already received 10,000) in 1867.

TRANSUBSTANTIATION, the doctrine of the "real presence." That the bread and wine in the Eucharist are changed into the very flesh and blood of Christ by the consecration, was broached in the days of Gregory III. (731), and accepted by Amalarius and Radbertus (about 830), but rejected by Rabanus Maurus, Johannes Scotus Erigena, Berengarius, Wycliffe, and others. In the Lateran council, held at Rome by Innocent III., the word "Transubstantiation" was used to express this doctrine, which was decreed to be incontrovertible; and all who opposed it were condemned as heretics. This was confirmed by the council of Trent, 18 Jan. 1562. John Huss, Jerome of Prague, and other martyrs of the reformation, suffered for denying this dogma, which is renounced by the church of England (28th article), and by all protestant dissenters. The declaration against transubstantiation, invocation of the saints, and the sacrifice of the mass, on taking any civil office, was abolished by an act passed 25 July, 1867; see *Sacrament*.

Luther maintained the doctrine of *con-substantiation*, viz., that after consecration the body and blood of Christ are substantially present in the bread and wine. He was opposed by Bucer, Carlstadt, Zwingle, and others (termed sacramentarians), who asserted that the Lord's supper is only a commemorative rite.

TRAPPISTS. The first abbey of La Trappe in Normandy was founded, in 1140, by Rotrou, comte de Perche. The present order of Trappists owes its origin to the learned Jean le Bouthillier de la Rancé (editor of *Anacreon* when aged 14), who renounced the world, and sold all his property, giving the proceeds to the abbey of La Trappe, to which he retired in 1662, to live there in great austerity. After several efforts he succeeded in reforming the monks, and in establishing a new rule, which commands silence, prayer, reading, and manual labour, and which forbids study, wine, fish, &c. Rancé was born in 1620, and died in 1700.

A number of these monks, driven from France in the revolution of 1790, were received by Mr. Weld, of Lulworth, Dorsetshire, who gave them some land to cultivate and a habitation, where they remained till 1815. This order was charged with rebellion and conspiracy in France, and sixty-four English and Irish Trappists were shipped by the French government at Palmbœuf, 19 Nov., and were landed from the *Hebé*, French frigate, at Cork, 30 Nov. 1831. They established themselves at Mount Melleray, county of Waterford.

TRASIMENE, see *Thrasymenus*.

TRAUTENAU (Bohemia). On 27 June, 1866, the first corps of the army of the crown-prince of Prussia seized Trautenau, but was defeated and repulsed by the Austrians under Gablenz; on the 28th, the Prussians defeated the Austrians with great loss.

TRAVELLERS' CLUB (Pall-mall), established in 1815. A member must have "travelled out of the British islands to a distance of at least 500 miles from London, in a direct line."

TRAVELLING IN ENGLAND. In 1707 it took in summer one day, in winter nearly two days, to travel from London to Oxford (55 miles). In 1817 the journey was accomplished in six or seven hours. By the Great Western Railway express (63 miles) it is done in just over 1 hour. In 1828, a gentleman travelled from Newcastle to London (273 miles) inside the best coach in 35 hours, at an expense of 6*l.* 15*s.* 3*d.* or 6*d.* per mile (including dinner, &c.) In 1857, the charge of the Great Northern railway (275¼ miles) first-class express (6 hours) was 5*os.* 9*d.*; in 1905, 3*8s.* 3*d.*

No fixed charge is made by the majority of railway companies for the hire of special trains. The general charges are 5*s.* per mile, plus the ordinary fare for each passenger according to class.

TRAWLING. Deep-sea fishing with a boat (either sail or steam) having a very large net attached to it, and thereby catching the fish which mostly live at the bottom of the sea, principally practised on the N.E. coast of Britain.

Commissions reported in 1864 and since, that trawling was not injurious to the supply of fish as suggested; but another commission, with scientific advice, reported in Feb. 1885, that there was some ground for the fishermen's complaints.

TREAD-MILL, an invention of the Chinese, to raise water for the irrigation of the fields. The complicated tread-mill introduced into the prisons of Great Britain is the invention of Mr. (afterwards sir William) Cubitt, of Ipswich. It was erected at Brixton gaol, 1817, and soon afterwards in other large prisons. Towards the end of the last century it fell into disuse and very few were in existence in 1905.

TREASON, see *High Treason*. **PETTY TREASON** (a term abolished in 1828, defined by the statute of 25 Edw. III. 1352) was a wife's murder of her husband; a servant's murder of his master; and an ecclesiastical person's murder of his prelate or other superior. *Misprision* of treason, knowledge and concealment of the crime, punishable with forfeiture of goods and imprisonment for life.

TREASON-FELONY. By the Crown and Government Security Act, 11 Vict. c. 12 (1848), certain treasons heretofore punishable with death were mitigated to felonies, and subjected to transportation or imprisonment. The Fenians in

Ireland were tried under this act; see *Trials*, 1865.

TREASURER OF ENGLAND, LORD HIGH, the third great officer of the crown, a lord by virtue of his office, having the custody of the king's treasure, governing the upper court of exchequer, and formerly sitting judicially among the barons. The first lord high treasurer in England was Odo, earl of Kent, in the reign of William I. This great trust is now confided to a commission, and is vested in five persons, called "lords commissioners for executing the office of lord high treasurer," and of these the chancellor of the exchequer is usually one: the first lord being usually the premier, see *Administrations*, for a succession of these officers. Sir Stafford Northcote (aft. Earl of Iddesleigh) was first lord of the treasury and not premier, 24 June, 1885, as was Mr. W. H. Smith, 26 July, 1886, see *Salisbury Administrations*. A third lord of the treasury (Mr. Stansfeld) was appointed, Dec 1868, succeeded by Mr. W. H. Gladstone, Dec. 1869.

The first of this rank in IRELAND was John de St John, Henry III 1217, the last, William, duke of Devonshire, 1766, vice treasurers were appointed till 1789, then commissioners till 1816, when the revenues of Great Britain and Ireland were united

The *first* lord high treasurer of SCOTLAND was sir Walter Ogilvie, appointed by James I. in 1420; the *last*, in 1641, John, earl of Traquair, afterwards commissioners were appointed.

TREASURER OF THE CHAMBER, formerly an officer of great consideration, and always a member of the privy council. He discharged the bills of all the king's tradesmen, and had his office in Cleveland-row, in the vicinity of the royal palace. His duties were transferred and the office suppressed at the same time with the offices of master of the great wardrobe and cofferer of the household in 1782. *Beatson.*

TREATIES. A formal and written treaty made in England with any foreign nation was signed at Kingston between Henry III and the dauphin of France (then in England and leagued with the barons), 11 Sept. 1217. The first commercial treaty was with Guy, earl of Flanders, 2 Edw. 1274, the second with Portugal and Spain, 1308. *Anderson.* The chief treaties of the nations of Europe will be found described in their respective places the following forms an index; see *Coalitions, Commerce, Leagues*, &c. TREBIA, now *Trebbia*, a river in North Italy, near which Hannibal defeated the Roman consul Sempronius, 218 B.C.; and Suvarrow, after a struggle, defeated the French marshal Macdonald and compelled him to retreat, 17-19 June, 1799.

TREBIZOND, a port of Asia Minor in the Black Sea, was colonised by the Greeks, and became subject to the kings of Pontus. It enjoyed self-government under the Roman empire, and when the Latins took Constantinople in 1204, it became the seat of an empire which endured till 1461, when it was conquered by the Turks under Mahomet I. Population, about 45,000.

TREES in London. Many were planted by John Evelyn in the Mall, St James's, &c. He recommended this in his "Fumifugium," published 1661. The planting of rows of trees in suburban roads began in 1875.

Trees of Liberty were planted in Paris and other parts of France during the revolutionary era, 1792 and 1848. These trees were cut down in Paris in Jan. 1871, when riots ensued, put down by the military.

The celebrated tree *Ferrier*, planted in 1789 near the National Library, Paris, was felled early in 1884.

English arboricultural society founded at Hexham in 1880. Annual meetings.

TRENT (the ancient Tridentum), in the Tyrol, belongs to Austria. The council held here is reckoned in the Roman catholic church as the 18th general council. Its decisions have been implicitly received as the standard of faith, morals, and discipline in that church. It first sat 13 Dec. 1545, and continued (with interruptions) under pope Paul III., Julius III., and Pius IV. to 4 Dec 1563; its last sitting (the 25th). A jubilee in relation to this council was celebrated in June, 1863. Trent was

several times taken during the French war. Population, about 22,000.

At the council was decreed, with anathemas: the canon of scripture (including the apocrypha), and the church its sole interpreter; the traditions to be equal with scripture; the seven sacraments (baptism, confirmation, the Lord's supper, penance, extreme unction, orders, and matrimony), transubstantiation; purgatory; indulgences; celibacy of the clergy, auricular confession, &c.

TRENT STEAMER, see *United States*, Nov.-Dec. 1861.

TREVECCA, see *Cheshunt*.

TRÈVES, or **TRIER**, the Roman Treviri, in Rhenish Prussia, was a prosperous city of the Gauls, 12 B.C. The emperor Gallienus held his court here A.D. 255. The church of St. Simeon dates from the 4th century. Trèves was made an electorate in the 14th century, and became subject to the archbishop in 1585. Councils held here, 385-1423. The archbishopric is said to have been founded before the 7th century and to be the oldest in Germany. After various changes, Trèves was acquired by Prussia, June 1815. In 1844 much excitement was occasioned by miracles said to have been wrought by a "Holy Coat" in the cathedral. The coat was exhibited to thousands, Aug., Sept. 1891. Population, 1890, 36,162; 1900, 43,324.

"*TRIA JUNCTA IN UNO*" (three joined in one), the motto of the knights of the military order of the Bath, signifying "faith, hope, and charity;" see *Bath*.

TRIAL AT BAR, signifies by the whole court or a plurality of judges. This plan was adopted at Bristol after the riots in 1832, also at O'Connell's trial, 1844; and arranged for the trial of the claimant of the Tichborne estates for perjury, in April, 1873. See *Juries*.

TRIALS. Regulations for conducting trials were made by Lothaire and Edric, kings of Kent, about 673 to 680. Alfred the Great is said to have begun trial by jury; but there is good evidence of such trials before his time. Arrangements were made for more speedy trials by "the Winter Assizes Act," 1876. See *Appeal*.

Gorham v. the bishop of Exeter, ecclesiastical case; judgment given in the court of Arches against the plaintiff 2 Aug ,,
[The bishop had refused to institute the rev. Mr. Gorham into the living of Brampton-Speke, in Devonshire, alleging want of orthodoxy in the plaintiff, who denied that spiritual regeneration was conferred by baptism; the court held that the charge against the plaintiff of holding false doctrine was proved, and that the bishop was justified in his refusal. Mr. Gorham appealed to the Judicial Committee of the Privy Council, which pronounced its opinion (8 March, 1850) that "the doctrine held by Mr. Gorham was not contrary or repugnant to the declared doctrine of the church of England, and that Mr Gorham ought not, by reason of the doctrine held by him, to have been refused admission to the vicarage of Brampton-Speke." This decision led to subsequent proceedings in the three courts of law, successively, for a rule to show cause why a prohibition should not issue, directed to the judge of the Arches court, and to the archbishop of Canterbury, against giving effect to the judgment of her majesty in council. The rule was refused in each court, and in the end Mr. Gorham was instituted into the vicarage in question, 7 Aug. 1850.]

The defendant, F. H. Swynfen, son of the testator's eldest half-brother, claimed the estate as heir-at-law on the ground of the testator's insanity. The issue was brought to trial in March, 1856; but proceedings were stayed by Mrs. Swynfen's counsel, sir F. Thesiger, entering into an agreement with the opposite counsel, sir Alexander Cockburn, without her consent, and in defiance of her instructions. After various proceedings, the court of chancery ordered a new trial. She gained her cause, mainly through the energy of her counsel, Mr. Chas. E. Kennedy, to whom she had promised to pay 20,000l. for his extraordinary services. Mrs. Swynfen, however, married a Mr. Brown, and repudiated Mr. Kennedy's claim. The latter, in an action against her, obtained a verdict in his favour on 29 March, 1860, which was, on appeal, finally reversed in Feb. 1864. Mrs. Swynfen was non-suited in an action brought against her counsel (afterwards lord Chelmsford and lord chancellor), in July, 1859, and June, 1860.]

Beck Case. A man calling himself John Smith was convicted in 1877 at the Old Bailey for defrauding women of money or jewellery, perpetrating these frauds under the name of lord Willoughby. Smith was sentenced to 5 years penal servitude, and released on licence, April, 1881. Complaints were made to the police by women that they had been defrauded in a similar manner by a man styling himself Lord Wilton, or lord Winton, de Willoughby, and representing that he had an establishment at St John's-wood. Ottilie Meissonier, a woman who had been defrauded, Nov. 1805, chanced to meet Mr. Adolf Beck, a Norwegian, in Victoria-street, 16 Dec., and charged him with having robbed her, and Mr. Beck, who denied the accusation, was charged. Some of the women who had been victimised affirmed that Mr Beck was the man who had defrauded them, and gave evidence to that effect before Mr. Shiel, magistrate at Westminster police court. The case being reported a gentleman who had been interested in the original charge against Smith informed the police that Mr. Beck was doubtless the ex-convict Smith and an ex-policeman, Spurrell, swore positively that Mr. Beck was Smith, his opinion was confirmed by another policeman who had been connected in the original case. In March, 1896, Mr. Beck was tried at the Old Bailey before sir Forrest Fulton, and on conviction sentenced to 7 years' penal servitude. For the defence it was contended that the real criminal was the man who had been convicted in 1877. Petitions from Mr. Beck after conviction to the home office that the case was one of mistaken identity were unavailing, and in prison his clothes were marked with D.W., as an indication that he had been previously convicted. In 1898, Mr. Beck's solicitor approached the home office with a view to reopen the case, Mr. Beck having discovered that Smith was a Jew, and that the police had evidence of this fact. This was admitted by the home office (Smith having in

been examined by the prison doctor at Portland, who reported to the home office that Smith was a Jew), and it was decided that Mr. Beck and Smith were not identical. The D.W. was removed from Mr. Beck's clothing, but the authorities still regarded Mr. Beck as guilty of the charges for which he had been convicted. Mr. Beck was released on license, July, 1901. In April, 1904, he was re-arrested on a similar charge to that for which he was imprisoned in 1896, was convicted, but sentence was postponed until the next session. In the interval the ex-convict Smith was arrested on a charge of defrauding women, which led to further inquiries, with the result that Mr. Beck's innocence was proved and he received a free pardon in respect of the 1896 and 1904 convictions, with the offer of a grant of £2,000 by the treasury. This was refused by Mr. Beck, who demanded an inquiry. A committee of inquiry was appointed by the home office, Sept. 1904, the members were the master of the rolls, Mr Spencer Walpole, and sir John Edge. Report, issued 24 Nov. 1904, found that there had been a deplorable failure of justice due to mistaken identity that it was not until the re-arrest of Smith after Mr Beck's second conviction that it became known to any one concerned in the case that there was in existence evidence conclusively negativing the identity of Smith and Mr Beck when it had been conclusively proved to the home office in 1898 that Mr Beck was not Smith, he was allowed to serve out his term, and the fact thus discovered by the home office was never communicated by them to the public prosecutor or to the police; the committee were satisfied that the conduct of the police throughout was dictated by nothing but a sense of duty and was perfectly correct; they found that Mr Forrest Fulton's ruling in 1898 was wrong in refusing to admit evidence that Mr Beck was not Smith, and recommended as a remedy for such an error in future that the law should be so amended that all criminal judges should be compelled to state a case on point of law for the opinion of the court of crown cases reserved on good cause being shown, that the action of the home office was defective in dealing with the case in 1898 when they did not clearly explain to sir Forrest Fulton that there was distinct evidence that Smith and Mr Beck could not possibly be the same person; the committee declined to record their opinion that there is no shadow of foundation for any of the charges made against Mr Beck. The report ends "And though it is possible beyond our province to suggest it, may not the time have come for abolishing the anomaly of pardoning a man who ought never to have been convicted, and a simpler remedy adopted of quashing the conviction on motion by the attorney general and entering an acquittal as of record?"

TRIBUNES OF THE PEOPLE (*Tribuni Plebis*), magistrates of Rome, first chosen from among the commons to represent them, 494 B.C., when the people, after a quarrel with the senators, had retired to Mons Sacer. The first two tribunes were C. Licinius and L. Albinus; but their number was soon after raised to five, and 37 years after to ten, which number remained fixed. The office was annual, and as the first had been created on the 4th of the ides of December, that day was chosen for the election. In A.D. 1347, Nicolo di Rienzi assumed absolute power in Rome as tribune of the people, and reformed many abuses, but committing extravagances, he lost his popularity and was compelled to abdicate. TUBULAR BRIDGES. The Britannia Tubular Suspension Bridge, then the most wonderful enterprise in engineering in the world, was constructed, 1846-50 (Mr R. Stephenson and Mr. Fairbairn, engineers), about a mile southward of the Menai Strait Suspension Bridge.*

On the Britannia rock, near the centre of the Menai Strait, the surface of which is about ten feet

* The Britannia tubular bridge was intended to supply the place of one of the finest bridges in the kingdom; and the railway, of which the tubular bridge forms a part, is in like manner a substitute for one of the finest mail coach roads ever constructed. The road from London to Holyhead was regarded as the highway from the British metropolis to Dublin, and the late Mr. Telford was applied to by the government to perfect this road by the London and Holyhead mail-coach road, which he did by erecting a beautiful suspension bridge over the river Conway and over the Menai Strait; commenced 25 July, 1818, and finished in July, 1825.

above low water level, is built a tower two hundred feet above high water (commenced building, May, 1846), and on which rest two lines of tubes or hollow girders strong enough to bear their weight and laden trains in addition, the ends resting on the abutments on each shore, each tube being more than a quarter of a mile in length. The height of the tube within is thirty feet at the Britannia tower, diminishing to twenty-three feet at the abutments. The lifting of these tubes to their places was a most gigantic operation, successfully performed, 27 June, 1849

TUGENDBUND ("league of Virtue"), formed in Prussia soon after the peace of Tilsit, June, 1807, ostensibly for relieving the sufferers by the late wars, and for the revival of morality and patriotism. Its head-quarters were at Konigsberg. It excited the jealousy of Napoleon, who demanded its suppression in 1809. It was dissolved at the peace in 1815.

TUILERIES (Paris), the imperial palace of France, commenced by Catherine de Medicis, after the plans of Philibert de l'Orme, 1564, continued by Henry IV., and finished by Louis XIV. This palace was stormed by the mob, 10 Aug. 1792, and ransacked in the revolutions of July, 1830, and Feb. 1848. Louis Napoleon made it his residence in 1851, and greatly renovated it. The restoration of the Tuileries (much injured by fire by the communists, May 1871) was determined on, Oct. 1872; not proceeded with. The ruins were sold for 32,000*l.* to M. Picard, 4 Dec. 1882.

TULCHAN BISHOPS; a mere nominal episcopacy set up in Scotland by the regent Morton, who, with other nobles, absorbed the larger portion of the revenue, 1572-3. *Tulchan* was a stuffed calf's skin set before a cow to facilitate milking.

TULIPS, indigenous in the east of Europe, came to England from Vienna about 1578. It is recorded in the register of Alkmaer in Holland, that in 1639, 120 tulips, with the offsets, sold for 90,000 florins: and that one, called the *Viceroy*, sold for 4203 guilders! The States stopped this ruinous traffic. The *tulip tree*, *Liriodendron tulipifera*, was brought to England from America, about 1663.

Committee's selection rejected by the senate, Oct. 1903.

TUNBRIDGE WELLS (Kent). The springs were discovered, it is stated, by Dudley, lord North, who, when very ill, was restored to health by the use of the waters, 1606. The wells were visited by the queens of Charles I. and II., and by queen Anne, and soon became fashionable. Population, 1881, 24,119; 1891, 27,895; 1901, 35,000.

TUNIS (N. Africa) stands nearly on the site of Carthage. Tunis was besieged by Louis IX., of France, who died near it 25 Aug. 1270. It remained under African kings till taken by Barbarossa, for Solyman the Magnificent, 1531. Barbarossa was expelled by the emperor Charles V., when 10,000 Christian slaves were set at liberty, June, 1535. The country was recovered by the Turks under Selim II. 1575. The bey of Tunis was first appointed in 1574; Tunis was reduced by admiral Blake, on the bey refusing to deliver up the British captives, 1655. The Hussein dynasty was founded 1705. In July, 1856, the bey agreed to make constitutional reforms. He died 22 Sept. 1859, and his brother and successor Mohamed-es-Sadok took the oath of fidelity to the constitution. He died, and was succeeded by his brother Sidi Ali, 28 Oct. 1882; died, 11 June, 1902, succeeded by his son Mohamed. Tunis made a French protectorate, 1882. TUNNAGE AND POUNDAGE were ancient duties levied on every tun of wine and pound of other goods, imported or exported, and were the origin of our "customs." They commenced in England about 1346, and were granted to the kings for life, beginning with Edward IV. Charles I. gave great offence by levying them on his own authority, 1628. They were granted to Charles II. for his lifetime, 24 June, 1660. By the act 27 Geo. III. c. 13, these and other duties were repealed, 1787, and a new arrangement of excise and customs was introduced.

TUNNELS, for drainage, are ancient. The earliest tunnel for internal navigation was executed by M. Riguet, in the reign of Louis XIV., at Bezièr in France. The first in England was by M Brindley, on the duke of Bridgewater's cana near Manchester, about 1766. Project of th Gravesend tunnel, 1800—the report upon it, 180 The Thames Tunnel was projected by Mr. Brun in 1823, and opened for foot passengers, 25 March 1843; see *Thames Tunnel*. Innumerable tunne have been made for railways. TURBINES. The first steam turbine-fitted vessel, the *Turbinia*, was constructed by the hon. C. A. Parsons at his works at Newcastle-on-Tyne. The *Turbinia*, a small vessel, 100 ft in length, underwent her first trial 4 Nov. 1894. The system rapidly developed, owing to the increased speed of the vessels fitted with turbine engines, and the economy effected in coal by their use, improve- ments being made in their construction and the application of the system to various types of ships, including liners and vessels of the royal navy. The turbine-driven torpedo-boat-destroyer *Viper* was lost off the Channel Islands in 1896, and the t.-b.-d. *Cobra* suffered a similar fate in the North Sea in 1897. The first Clyde passenger-ship, *King Edward*, was built in 1901, followed by the *Queen Alexandra* and the *Princess Maud*, 1903. The first turbine ss. for the Atlantic passenger service, the Allan line *Victorian*, 16,000 tons gross, was launched in 1904; and in the same year a sister ship, owned by the same line, the *Virginian*, 11,000 tons gross, was also launched. The *Virginian* crossed the Atlantic in 4 days 4 hrs., (allowing for difference in British and Canadian time), she left Moville 2 p.m. 9 June, and passed Cape Race, Newfoundland, 11 p.m. on 13 June, 1905. The *Carmania*, a Cunarder, 21,000 tons gross, 21,000 indicated h.p., with a speed of 21 knots, fitted with turbine-, with accommodation for 2,656 passengers, was launched 21 Feb. 1905, and on her trial trips attained a speed of 19¾ knots in a prolonged run. Other large liners to be driven by turbines are in course of construction. See also *Shipping*, *Steam Engine*, and *Navigation*, *Navy*, and *Addenda*.

TURIN, the ancient Augusta Taurinorum in Piedmont, capital of the Sardinian States, and of the kingdom of Italy, till 1864, when it was super- seded by Florence. Its importance dates from the permanent union of Savoy and Piedmont in 1416. The French besieged this city; but prince Eugène defeated their army, and compelled them to raise the siege, 7 Sept. 1706. In 1798, the French republican army took possession of Turin, seized all the strong places and arsenals of Piedmont, and obliged the king and his family to remove to the island of Sardinia. In 1799, the French were driven out by the Austrians and Russians; but the city and all Piedmont surrendered to the French, June 1800. In May 1814, it was restored to the king of Sardinia; see *Italy*, 1804. Here prince Hum- bert was married to his cousin Margherita amidst great rejoicing, 22 April, 1868. The monument to Cavour was inaugurated, 8 Nov. 1873. An exhibition opened by the king, 25 April, 1880; another opened by the king, 1 May, 1898. TURKESTAN, called by the Persians Turan, formerly Independent Tartary (*which see*), the original country of the Turks, in Central Asia, was reached by Alexander, 331 B.C., and has since undergone many changes, forming successively part of the empires of Genghis Khan and Tamer- lane (see *Tartary*). For Eastern or Chinese Turkestan, see *Kashgaria*; for Western, see *Bokhara* and *Khiva* The Russians gradually encroached on this country; on 14 Feb. 1865, a new province, Turkestan, was created by decree, and gen. Kauffmann made governor, 26 July, 1867; died 16 May, 1882. The rule of the czar accepted by the chief tribes at Merv (*which see*), announced 8 Feb. 1884. Gen. Dukhofski appointed gov.-gen. of Turkestan and the Transcaspian territory, April, 1898. Explorations and discoveries by Dr. Sven Hedin in 1895, and by Dr. Stein, June-Dec. 1900. Severe earthquake shocks at Andijan, in Ferghana, 10,000 deaths, 15,000 houses destroyed, 16 Dec. 1902.

TURKEY. The Turks were originally a tribe of Tartars; but, by incorporation with the peoples they have conquered, have become a mixed race. About 760, they obtained possession of a part of Armenia, called from them Turcomania. They gradually extended their power; but in the 13th century, being harassed by other Tartar tribes, they returned to Asia Minor. The Turkish empire till 1878 comprehended the almost independent

principalities of Moldavia and Wallachia, Servia, and Montenegro, the hereditary vice-royalty of Egypt, and Tunis. The Turkish quadrilateral fortresses were Shumla, Varna, Silistria, and Rustchuck. The population of the empire was estimated in 1887 at 32,978,100; (immediate Possessions, 21,633,000, tributaries and protectorates, 11,345,100), in Europe, 8,987,000, Asia, 16,174,100; Africa, 7,817,000; 1901, in Europe, about 6,000,000, total, including Asia, &c., about 30,732,000. By the treaty of Berlin (13 July, 1878) Turkey was said to have

	Square Miles	Inhabitants	Mohammedans
Ceded to Roumania	5,935	246,000	142,000
,, Servia	4,396	264,000	75,000

Included in Eastern Roumelia	13,646	746,000	265,000

If the provinces "indefinitely" to be occupied by Austria, Bulgaria, and Eastern Roumelia are excluded, there remain to Turkey in Europe only 74,790 square miles, with 4,779,000 inhabitants, of whom 2,521,500 are Mohammedans. In Armenia Russia takes 10,000 square miles, with about 350,000 inhabitants. Cyprus, entrusted to the keeping of England, has an area of 4,584 square miles, and 237,000 inhabitants in 1901. Thessaly ceded to Greece by convention, 24 May, treaty signed, 2 July, 1881. The Ottoman Empire now consists of about 66,500 sq. miles in Europe, 680,000 sq. miles in Asia, and 400,000 sq. miles in Africa. The estimated population, 1905, being 25,000,000. The will was disputed by his relatives, but a compromise was made The oil-paintings (100 in number) and the drawings (1,400) were obtained by the nation, and the engravings and some other property were transferred to the next of kin The drawings were cleaned and mounted under the careful superintendence of Mr. Ruskin, and the pictures were sent to Marlborough-house for exhibition In 1861, many of the pictures were removed from the South Kensington Museum to the National Gallery, others in 1863 The sketches, plates, &c., of *Turner's Liber Studiorum*, were sold for about 20,000*l* 28 March, 1873

TUSCAN ORDER OF ARCHITECTURE, a debased Doric, used in Tuscany for buildings in which strength is chiefly required. *Wotton*.

TUSCANY, formerly a grand-duchy in Central Italy, the northern part of the ancient Etruria (*which see*). It formed part of the Lombard kingdom, after the conquest of which by Charlemagne, 774, it was made a marquisate for Boniface about 828. His descendant, the great countess Matilda, bequeathed the southern part of her domains to the pope (1115). In the northern part (then called Tuscia), the cities, Florence, Pisa, Sienna, Lucca, &c., gradually became flourishing republics. Florence became the chief under the government of the Medici family; see *Florence*. The duchy in that family began in 1531; and the grand-duchy in 1569. TUSCULUM (now Frascati), a city of Latium (S. Italy). The Tusculans supported Tarquinius Superbus against the Romans, by whom they were totally defeated, 498 B.C. The Tusculans, on account of their friendship with Rome, suffered much from the other Latins, who took their city, 374, but were severely chastised for it. Here Cicero during his retirement wrote his "Tusculanæ Disputationes," about 46 B.C.

Millie-Christine, negro twins, born in North Carolina in 1851, were wholly distinct in the upper part of the body, but one in the lower part of the spinal column and pelvis, the four legs obeying nerves from a common centre. They sang and danced well, and were named the "Two-headed Nightingale." The will, understanding, and consciences were distinct. Exhibited in London 17 Feb. 1885. See *Siamese Twins*.

TWIN-SHIP, see under *Steam*.

"TWOPENNY TRASH," a term given to W. Cobbett's *Weekly Political Register*, after 2 Nov. 1816, when he reduced the price from 12 *d* to 2*d*., the sale greatly increased.

TYBURN (W. London), at the west end of Oxford-road (now street), the chief place in London for the execution of malefactors till 1783. Pennant (who died 1798) remembered Oxford-street as "a deep, hollow road, and full of sloughs, with here and there a ragged house, the lurking-place of cut-throats."

In conformity with an act passed in 1607, a so called "Tyburn ticket" was given to the prosecutor of a criminal executed at Tyburn. The ticket gave exemption from serving on juries and parochial offices. The act was repealed in 1818.

"TYBURNIA" (a N.W. suburb of London), was built between 1839 and 1850, on the green fields and nursery grounds in Paddington belonging to the see of London.

TYLER'S INSURRECTION, in opposition to the poll-tax imposed on all persons above 15, 5 Nov. 1380. One of the collectors, acting with indecent rudeness to Wat Tyler's daughter, was struck dead by the father, June, 1381. His neighbours took arms, and in a short time almost the whole of the population of the southern and eastern counties rose, extorting freedom from their lords, and plundering. On 12 June, 1381, they gathered upon Blackheath to the number of 100,000 men, and on 14 June murdered Simon of Sudbury, archbishop of Canterbury, and sir Robert Hales, the royal treasurer. The king, Richard II., invited Tyler to a parley, which took place on the 15th at Smithfield, where the latter addressed the king in a menacing manner, now and again lifting up his sword. On this the mayor, Walworth, stunned Tyler with a blow of his mace, and one of the king's knights named Cavendish, dispatched him. Richard temporised with the multitude by promising a charter, and thus led them out of the city, when sir R. Knollys and a band of knights attacked and dispersed them with much slaughter. The insurrection in Norfolk and Suffolk was subdued by the bishop of Norwich, and 1500 of the rebels were executed.

The chapel has been restored. Tynemouth was made a borough, returning one member to parliament, 1832. An aquarium, winter-garden, &c., was opened, 27 Aug 1878. Population, 1881, 44,118, 1891, 46,267, 1901, 51,514.

TYPE-FOUNDING, see under *Printing*, 1452, 1720.

TYPE-WRITERS. M. Foucault sent to the Paris exhibition of 1855, a writing-machine for the blind; and several were invented by Wheatstone. After successive improvements, Messrs. Remington, in America, in 1873, contracted to construct 25,000. The standard speed is between 60 and 70 words per minute, the record 208. Many other types are in existence, including the Yost, Hammond, Oliver, Simplex, Bar-lock, Smith-Premier, Blickensderfer, &c.

TYRANT. In early Greek history, the term was applied to any man who governed with irresponsible power. Solon objected to the term, and chose the name Archôn (ruler), 594 B.C. The earliest tyrants were those at Sicyon, beginning with Cleisthenes, in the 7th century B.C. Tyranny declined in Greece about 490 B.C., and revived after the close of the Peloponnesian war, 404 B.C.; see *Thirty Tyrants*.

TYRE (Phœnicia), a great city, said to have been first built by Agenor. Another city was built 1257 (about 2267, *Hales*) B.C. It was besieged by the Assyrians, who retired from before it, after a siege of upwards of five years, 713 B.C. Taken by Nebuchadnezzar, 572 B.C., and the city demolished, when the Tyrians removed to an opposite island, and built a new and magnificent city. It was taken by Alexander with much difficulty, after a siege of seven months, July, 332 B.C. He joined the island to the continent by a mole. *Strabo*. Tyre was captured by the Crusaders, 7 July, 1124; by the French, 3 April, 1799; and by the allied fleet, during the war against Mehemet Ali, 1841.

TYRE, ERA OF, began on 19 Oct. 125 B.C., with the month of Hyperberetæus. The months

were the same as those used in the Grecian era, and the year is similar to the Julian year. To reduce this era to ours, subtract 124, and if the given year be less than 125, deduct it from 125, and the remainder will be the year before Christ.

TYROL, the eastern part of ancient Rhætia, now a province of the Austrian empire, was ceded to the house of Hapsburg in 1363 by Margaret, the heiress of the last count. It became an appanage of the younger (or Tyrol) branch of the imperial house, which came to the throne in the person of Maximilian II., in 1618. The French conquered the Tyrol in 1805, and united it to Bavaria; but in 1809, an insurrection broke out, headed by Andreas Hofer, an innkeeper, who drove the Bavarians out of the Tyrol, thoroughly defeated some French detachments, but laid down his arms at the treaty of Vienna. He was subsequently accused of corresponding with the Austrians, captured and sent to Mantua, and there shot by order of the French government, 20 Feb. 1810. The Austrian emperor ennobled his family in 1819, and erected his statue in Innsbruck in 1834; another statue on the Iselberg was unveiled in the presence of the emperor Francis Joseph, 28 Sept. 1893. The Tyrolese riflemen were very effective in the Italian war in 1859. The Arlberg tunnel railway from Innsbruck to Bregenz inaugurated by the emperor 20 Sept. 1884. Population in 1890, 812,696, 1900, 850,062.

ULSTER, the N division of Ireland. After the death of Strongbow, 1176, John de Courcy was made earl of Ulster; Hugh de Lacy was earl, 1243; and Walter de Burgh, 1264; whose descendant, Elizabeth, married Lionel, son of Edward III., 1352. He thus became earl of Ulster. In 1611, the British colonisation of the forfeited lands (termed the *Ulster settlements* or *plantations*) began, much land being granted to the corporation of London; see *Irish Society*. The consequent rebellion of the Irish chieftains, Roger More, Phelim O'Neale, McGuire, earl of Inniskillen, and others, broke out on 23 Oct 1641 (see *Ireland*).—*Ulster King of Arms* appointed for Ireland, 1553.—By the ancient "Ulster tenant-right," the outgoing tenant of a farm received from his successor a sum of money for the privilege of occupancy. A modified form of this right was adopted in the Irish land act, passed 8 July, 1870.

The ULSTER CONVENTION, proposed 8 April, met at Belfast 17 June, 1892, in a large pavilion erected for the purpose. 12,000 delegates of various classes and opinions, from all parts of the province, with many other persons, were present, the duke of Abercorn being in the chair The proceedings, which were of a grave, earnest character, began with a prayer and the singing of part of psalm xlvi. Five resolutions for firmly maintaining the Union of Great Britain and Ireland in opposition to the scheme for home rule were passed unanimously.

ULTRAMONTANISTS (from *ultra montes*, beyond the mountains), a term originally applied in France to those who upheld the extreme authority of the pope in opposition to the freedom of the Gallican church, which had been secured by various bulls, and especially by the concordat of 13 July, 1801. Ultramontanists now are those who maintain the *official* infallibility of the bishop of Rome.

ULUNDI, Zululand, South Africa. On 4 July, 1879, the Zulus, commanded by their king, Cetywayo, who had refused the conditions of peace, were totally defeated near here by lord Chelmsford, after a severe conflict. Capt. Wyatt-Edgell, 17 Lancers, and 9 men were killed, and about 53 wounded. The British were attacked in the open country by the Zulus, who enveloped our hollow square and charged on all sides up to within *(a)* yards, when they broke and fled under the heavy fire. They were pursued and routed by cavalry. About 23,000 Zulus engaged, 1,500 killed. The British showed much firmness and the Zulus displayed great courage. The royal kraal at Ulundi and other military kraals were burnt.

It is said that the first person who generally used an umbrella in the streets of London was the benevolent Jonas Hanway, who died in 1786.

John Macdonald, a footman, who wrote his own life, informs us that he had "a fine silk umbrella, which he brought from Spain, but he could not with any comfort to himself use it, the people calling out 'Frenchman' why don't you get a coach?'" The hackney coachmen and chairmen were clamorous against their rival. The footman says he "persisted for three months till they took no further notice of this novelty. UNIFORMITY ACTS. That of 2 & 3 Edward VI., 15 Jan. 1549, ordained that the order of divine worship, drawn up by Cranmer and others, "with the aid of the Holy Ghost," should be the only one used after 20 May. The penalties for refusing to use it were fine and imprisonment. This act was confirmed in 1552, repealed by Mary, 1554, and re-enacted by Elizabeth in 1559. The act of Uniformity, 14 Charles II. c. 4, was passed in 1662. It enjoined uniformity in matters of religion, and obliged all clergy to subscribe to the thirty-nine articles, and use the same form of worship, and same book of common prayer. Its enforcement on 24 Aug. 1662, termed Black Bartholomew's day, caused, it is said, upwards of 2000 ministers to quit the church of England. This day was commemorated by dissenters in 1862. The Act of Uniformity Amendment act, whereby shortened services were authorised, and other changes made, was passed 18 July, 1872. The *Uniformity of Process* act, which made many law changes, was passed 23 May, 1832.

UNIFORMS. Military uniforms were first used in France, "in a regular manner" by Louis XIV. about 1668. In England the uniform was soon afterwards adopted in the military service, but with little analogy to the modern dress. See under *Navy*.

UNION JACK. The original flag of England was the banner of St. George, *i.e.*, white with a red cross, which, 12 April, 1606 (three years after James I ascended the throne) was incorporated with the banner of Scotland, *i.e.*, blue with a white diagonal cross. This combination obtained the name of "Union Jack," in allusion to the union with Scotland, and the word Jack is considered a corruption of the word Jacobus, Jacques, or James. This arrangement continued until the union with Ireland, 1 Jan 1801, when the banner of St. Patrick, *i.e.*, white with a diagonal red cross, was amalgamated with it, and forms the present Union flag. Mansion house meeting in aid of a "Union Jack" club in memory of the soldiers and sailors who died in the S. African war, 25 Feb 1903. UNITARIANS, termed Socinians from Lælius Socinus, who founded a sect in Italy about 1546. They profess to believe in and worship one only self-existent God, in opposition to those who worship the Trinity in unity. They consider Christ to have been a mere man; and do not admit the need of an atonement or of the complete inspiration of the Scriptures. Michael Servetus printed a tract in disparagement of the doctrine of the Trinity. In 1553, proceeding to Naples through Geneva, Calvin induced the magistrates to arrest him on a charge of blasphemy and heresy. Servetus, refusing to retract his opinions, was condemned to the flames, which sentence was carried into execution, 27 May, 1553. Servetus is numbered among those anatomists who made the nearest approach to the doctrine of the circulation of the blood, before Harvey established that doctrine. Matthew Hamont was burnt at Norwich for asserting Christ not to be the Son of God, 1 June, 1579. The Unitarians were numerous in Transylvania in the 17th century, they came to England about 1700, and many of the original English presbyterian churches became Unitarian about 1730. They were not included in the Toleration act till 1813. Their tenets resemble those of the Arians and Socinians (*which see*). The Unitarian marriage bill was passed, June, 1827. In Dec. 1833, by a decision of the vice-chancellor the Unitarians (as such) lost the possession of Lady Hewley's charity; the decision was affirmed on appeal in 1842. *British and Foreign Unitarian Association* founded, to promote Unitarianism, 1825. There were 229 congregations in England in 1851. There were 320 Unitarian churches in the United Kingdom in Feb. 1884; 304 in Jan. 1903. Congregations and mission stations number about 287 in England, 43 in Wales, 7 in Scotland, and 39 in Ireland, total 367. Ministers and lay workers, 371; Sunday schools, 320 - 1905. The rev. Dr. Martineau, LL.D., an eminent preacher and writer, died, aged 93, 11 Jan. 1900. The internat. Unitarian council met in Geneva, 1905.

UNITED STATES OF AMERICA were so styled by the congress of the revolted British provinces, 9 Sept. 1776. Their flag was declared to be thirteen stripes, alternately red and white and thirteen stars in a blue field, corresponding with the then number of states of the union, 20 June, 1777. There are now (1905) 45 states, 5 organized and 2 unorganized territories; the territory of Alaska and the island of Hawaii. Area, 3,622,000 square miles. The government of the United States is a pure democracy. Each of the states has a separate and independent legislature for the administration of its local affairs, but all are ruled in matters of imperial policy by two houses of legislature, the senate, elected for six years, and the house of representatives (357 in 1905) elected for two years, to which delegates are sent from the different members of the confederacy. The president of the United States is elected every fourth year by the free voice of the people. He and his ministers have no seat in the legislative assemblies. His veto may be nullified by the vote of two-thirds of the house. The election of Abraham Lincoln as president on 4 Nov. 1860, was followed by the secession of eleven slaveholding states, and led to the great civil war, 1861-5; see *Confederates*, *English Language*, *Cuba*, 1898.

The thirteen states of the union at the declaration of independence in 1776, the italics indicate the then slaveholding states; those with a * prefixed *seceded* from the federal government in 1860 and 1861, and were subdued in 1865.

by a mob, seized the arsenal at Harper's Ferry, a town on the borders of Virginia and Maryland, stopped the railway trains, and cut the telegraph wires; a conflict with the military ensued, when many of the insurgents were killed. Temporary panic in southern states.]

UNIVERSALISTS, who believe in the final salvation of all men. This doctrine, declared in the Talmud, and ascribed to Origen, about 230, was advocated by other early fathers, but opposed by St Augustin, about 420, and condemned by the 5th general council at Constantinople, May, June, 553. It was received by the Unitarians in the 17th century, and avowed by numerous clergymen of the church of England. James Relly, who published his "Union" in 1760, founded the sect of Universalists in Britain, and John Murray, in America, about 1770. The sect flourishes in America.

UNIVERSAL REVIEW, edited by Mr Harry Quilter, devoted to fine art, literature, &c., first published 15 May, 1888. Publication ceased Dec. 1890.

UNIVERSAL SUFFRAGE (*Plebiscitum*), one of the six points of the charter (*see Chartists*), was adopted by the French in their constitution of 1791, and used in the election of their president in 1851, and of their emperor in 1852, and by the Italian States in voting for annexation to Sardinia in 1860, 1861, 1866, and 1870.

USES, STATUTE OF, 27 Hen. VIII. c. 10 (1535-6); see *Charitable Uses*.

USHANT, an island near Brest, N.W. France, near which two naval battles were fought between the British and French fleets

(1) On 27 July, 1778, after an indecisive action of three hours, the French, under cover of the night, withdrew into the harbour of Brest. Admiral Keppel commanded the English fleet; the count d'Orvilliers the French. The failure of a complete victory was attributed to admiral sir Hugh Palliser's non-compliance with the admiral's signals. Palliser preferred articles of accusation against his commander who was tried and acquitted, and the charge against him declared to be "malicious and ill-founded."

(2) Lord Howe with 25 ships signally defeated the French fleet (26 ships, under Villaret Joyeuse), taking six ships of the line, and sinking one (the *Vengeur*), 1 June, 1794. While the two fleets were engaged in this action, a large fleet of merchantmen on the safety of which the French nation depended for its means of prosecuting the war, got safely into Brest harbour, which gave occasion to the enemy to claim the laurels of the day, notwithstanding their loss in ships, and in killed and wounded, which was very great. The day was long termed in England the "glorious first of June." The victory commemorated, 1 June, 1894.

USURY from a stranger was permitted to the Jews, but forbidden from their brethren, 1491 B.C. (*Exod.* xxii. 25; *Deut.* xxiii. 13.) This law was enforced by Nehemiah, 445 B.C. (*Neh.* v.) Usury was prohibited by the English parliament, 1341. Until the 15th century, no Christians were allowed to receive interest of money, and Jews were the only usurers, and therefore often banished and persecuted, see *Jews*. By the 37th of Henry VIII. the rate of interest was fixed at 10 per cent., 1545. This statute was repealed by Edward VI., but re-enacted 13 Eliz. 1570. For later legislation, see *Interest*.

UTAH, a western territory of North America, was organised 9 Sept. 1850, the capital, Salt Lake City, became the chief seat of the *Mormonites* (*which see*). Population in 1880, 143,963; 1890, 207,905; 1900, 276,749. Salt Lake city, 1850, 44,843; 1900, 53,531.

UTICA (N. Africa), an ancient Tyrian colony, an ally of Carthage, named in the treaty with the Romans 348 B.C. Here Cato the younger, after the defeat of the partisans of Pompey at Thapsus, committed suicide, 46 B.C. Utica flourished greatly after the fall of Carthage, and was made a Roman city by Augustus on account of its favouring Julius Cæsar. It suffered by the invasion of the Vandals, 439, and of the Saracens, about 700. See *New York*, 1895.

UTILITARIANISM, termed the "greatest happiness principle," the philosophy which proposes the attainment of the greatest happiness of the greatest number, a doctrine ascribed to Priestley by Bentham. The doctrine is found in the writings of Locke, Hartley, Hume, and Paley; but was chiefly propounded by Jeremy Bentham in his "Introduction to the Principles of Morals and Legislation," 1780-89, by John Stuart Mill, who died 9 May, 1873, and by sir Edwin Chadwick who died 5 July, 1890. Mill founded a small "utilitarian society," in 1822. He took the name from an expression in Galt's "Annals of the Parish." "The English Utilitarians," 3 vols., by Leslie Stephen, see *Athenæum*, 8 & 15 Dec. 1900.

UTOPIA, the name given by sir Thomas More to an imaginary isle, representing the "best state of a public weale," described in a book written in Latin, published 1548. The work is considered to be an ironical satire on the state of Europe at the time, Utopia signifying "Nowhere." An English translation was published in 1551, the rev. J. H. Lupton's edition was published by the Clarendon Press, Nov. 1895. For the loss of the *Utopia*, emigrant steamer, see *Wrecks*, 17 March, 1891.

UTRAQUISTS, see *Calixtins*.

UTRECHT (the Roman *Trajectum ad Rhenum*) became the seat of an independent bishopric about 695. The last prelate, Henry of Bavaria, weary of his turbulent subjects, sold his temporal government to the emperor Charles V. in 1528. The union of the Seven United Provinces began here (see *United Provinces*); signed 23 Jan. 1579, 300th anniversary celebrated 23 Jan. 1879. The *treaty of Utrecht*, which terminated the wars of queen Anne, was signed by the ministers of Great Britain and France, and all the other allies, except the ministers of the empire, 11 April, 1713. This treaty secured the Protestant succession in England, the separation of the French and Spanish crowns, the destruction of the works of Dunkirk, the enlargement of the British colonies and plantations in America, and a full satisfaction for the claims of the allies. Utrecht surrendered to the Prussians, 9 May, 1787; was acquired by the French, 18 Jan. 1795, and restored at the peace, 1814. Population, 1887, 81,398; 1890, 80,110; 1897, 96,349; 1900, 104,194.

UXBRIDGE (W. Middlesex). On 30 Jan. 1645, commissioners met here to discuss terms of peace between Charles I. and the parliament; they separated without effect, 22 Feb. The latter required absolute control of the army and navy, the abolition of the episcopacy, liturgy, &c. Uxbridge murder, see *Trials*, Dec. 1884.

* Various French histories, on the authority of the French demagogue Barrère, state that the English had 46 ships of the line, and the French only 25; and that the crew of the *Vengeur* sang the *Marseillaise* while the ship sank, displaying the tricolor flag. All this was denied in 1802, and disproved by rear-admiral Griffith in Nov. 1838. The *Vengeur* surrendered to the British, who exerted themselves to save the crew. The French statement was accepted by Alison, and at first by Carlyle, but afterwards contradicted by both.

VACATIONS, see *Terms*

VACCINATION (from *Variola Vaccina*, the cow-pox), discovered by Dr Edward Jenner. He was born in 1749, and educated for the medical profession, partially under John Hunter. Having heard that milkmaids who had had the cow-pox never took the small-pox, he, about 1780, conceived the idea of vaccination. He made the first experiment by transferring to a healthy child on 14 May, 1796, the *pus* from the pustule of a milkmaid who had caught the cow-pox from the cows. He announced his success in a memoir published 1798, and vaccination, begun 21 Jan 1796, soon became general, after much opposition. For this Dr Jenner received 10,000*l* from parliament, 2 June, 1802, and 20,000*l* in 1807. The first national institution for vaccination, the Royal Jennerian Institution, was founded 19 Jan 1803. The emperor Napoleon valued Dr Jenner so highly, that he liberated Dr Wickham, when a prisoner of war, at Jenner's request, and subsequently whole families of English, making it a point to refuse him nothing that he asked. Vaccination, although much opposed, was practised throughout all Europe previously to 1810. Dr Jenner died suddenly, 26 Jan. 1823.

VACUUM, is produced by reducing the pressure of the atmosphere, whereby its power of absorbing moisture is greatly increased. The Aristotelian philosophers asserted that "nature abhors a vacuum." It has been proved that an absolute vacuum cannot be obtained by the air pump, a small residuum of gaseous matter remains after extreme exhaustion. To study the effects of the projection of an electric discharge upon this matter, prof W. Crookes (last June, 1897) invented his celebrated *vacuum tubes*, which he exhibited with interesting experiments at the Royal Institution, 4 April, 1879. At the same place, on 21 Jan 1881, Dr Warren De La Rue exhibited splendid results which he had obtained with the assistance of Dr Hugo Muller, by means of an electric discharge from a battery of 14,400 chloride of silver cells into vacuum tubes. See *Rontgen Rays*. 32 forms of vacuum tubes are described in *Nature*, 28 Jan 1897. The power of absorbing moisture possessed by a vacuum has been utilised by M Emil Passburg, of Breslau, in his drying apparatus which has been successfully employed for drying grains by Messrs. Guinness, of Dublin, since the spring of 1888.

VADIMONIS LACUS, the Vadimonian lake, Umbria, central Italy, near which the Etruscans were totally defeated in two severe engagements by the Roman consuls 1, by Fabius Maximus, 309 B.C.; 2, by Cornelius Dolabella, 283.

VAGRANTS. By law, after being whipped, a vagrant was to take an oath to return to the place where he was born, or had last dwelt for three years, 1530. A vagrant a second time convicted was to lose the upper part of the gristle of his right ear, 1535, a third time convicted, death. A vagabond to be branded with a V, and be a slave for two years, 1547. If he absconded and was caught, he was to be branded with S, and be a slave for life. Vagrants were punished by whipping, gaoling, boring the ears, and death for a second offence, 1572. The milder statutes were those of 17 Geo II, 32, 35, and 59 Geo III. The present

Vagrant Act (5 Geo. IV. c. 83) was passed in 1824; amendment act passed, 12 Aug., 1898. See under *Poor*.

VALENCIA (E. Spain), the *Valentia Edetanorum* of the Romans, became the capital of a Moorish kingdom, 1000; annexed to Aragon 1238. Its university, founded, it is said, in the 13th century, was revived in the 15th. Valencia was taken by the earl of Peterborough in 1705, but submitted to the Bourbons after the unfortunate battle of Almanza, in 1707. It resisted the attempts made on it by marshal Moncey, but was taken from the Spaniards with a garrison of more than 10,000 men, and immense stores, by the French under Suchet, 9 Jan. 1812. Population of the city, 1887, 170,763; 1897, 204,768.

VALENCIENNES (N. France). This city (the Roman Valentianæ), after many changes, was taken by Louis XIV. in 1677, and annexed 1678. It was besieged from 23 May to 28 July, 1793, when the French garrison surrendered to the allies under the duke of York. It was retaken, together with Condé, by the French, 27-30 Aug. 1794; on capitulation, the garrison and 1,100 emigrants were made prisoners, with immense stores.

VALENTIA, a Roman province, including the country between the walls of Severus and Adrian, was reconquered from the Picts and Scots by Theodosius, and named after Valentinian I. the reigning emperor, 368.

VALENTINE'S DAY (14 Feb.). Valentine is said to have been a bishop, who suffered martyrdom under Claudius II. at Rome; others say under Aurelian, in 271. 618,000 letters passed through the post-office on 14 Feb. 1856. 530,300 was the estimated number of valentines delivered in 1864; in 1870, 1,545,755. The custom has now almost ceased. The origin of the ancient custom of "choosing a valentine" has been much controverted; see *Post*.

VALENTINIANS, followers of Valentine, a priest, who, on being disappointed of a bishopric, forsook the Christian faith, declaring there were thirty gods and goddesses, fifteen of each sex, which he called Æones, or Ages. He taught in the 2nd century, and published a gospel and psalms: his followers added other errors.

VALLADOLID (Spain), the Roman Pintia and the Moorish Belad Walíd: was recovered for the Christians by Ordoño II., the first king of Leon, 914-23. It became capital of Castile in the 15th century. It was taken by the French Jan. 1808; and captured by the English, 4 June, 1813. Here died Christopher Columbus, 20 May, 1506. Population, 1887, 62,012; 1897, 68,746.

VALLOMBROSA (Central Italy). A Benedictine abbey was founded here by John Gualbert, about 1038. The monks were termed Vallombrosians.

VALMY (N.E. France). Here the French, commanded by Kellermann, defeated the Prussians, commanded by the duke of Brunswick, 20 Sept. 1792. The victory was of immense moral advantage to the republicans; and Kellermann was made duke of Valmy in 1808.

VALPARAISO, principal port of Chili, South America, was bombarded by the Spanish admiral Mendez Nuñez, on 31 March, 1866, when much property was destroyed. It suffered by earthquakes in 1822, 1829, and 1851. Population, 1895, 122,447; 1900, 143,022. See *Chili*, 1891.

VALTELLINE (N. Italy), a district near the Rhætian Alps, seized by the Grison league, 1512, and ceded to it, 1530. At the instigation of Spain, the catholics rose and massacred the protestants, 19-21 July, 1620. After much contention between the French and Austrians, the neutrality of the Valtelline was assured in 1639. It was annexed to the Cisalpine republic in 1797; to Italy, 1807; to Austria, 1814; to Italy, 1860.

VALUATION OF PROPERTY ACT, to provide for the uniform assessment of rateable property in the metropolis, was passed 9 Aug. 1869.

VALVASOR (or "VAVASOR"). Camden holds that the "Vavasor" was next below a baron. Du Cange maintains that there were two sorts of vavasors: the greater, who held of the king, such as barons and counts; and the lesser, called "valvasini," who held of the former, such as vassals holding land under a nobleman himself a vassal. Valvasors are mentioned in the Domesday book, 1086.

VANADIUM (from Vanadis, the Scandinavian Venus), metal discovered by Sefström, in 1830, combined with iron ore. A similar metal, discovered in lead ore by Del Rio in 1801, and named *Erythronium*, was proved by Wöhler to be Vanadium. Vanadium was discovered in the copper bearing beds in Cheshire, in 1865, by Mr. (aft. Sir) H. E. Roscoe, by whom its peculiarities were further studied, and published in 1867-8. It is useful in photography and dyeing.

VANCOUVER'S ISLAND, North Pacific ocean, near the main land. Settlements were made here by the English in 1781, which were seized by the Spaniards in 1789, but restored. By a treaty between the British government and that of the United States in 1846, this island was secured to the former. It has become of much greater importance since the discovery of gold in the neighbouring main land in 1858, and the consequent establishment of the colony of British Columbia (*which see*). Victoria, the capital, was founded in 1857. The island was united with British Columbia by act passed in Aug. 1866; and on 24 May, 1868, Victoria was declared the capital. See *Japan, Sam.* Chinese immigrants are virtually excluded by a poll-tax, 1878.

He sailed 7 Jan. 1791, and returned 24 Sept. 1795. He compiled an account of this voyage of survey of the north-west coast of America, and died in 1798.

VARENNES, a town in N.E. France, is celebrated for the arrest of Louis XVI., his queen, sister, and two children. They fled from the Tuileries on 21 June, 1791, were taken here the next day, and conducted back to Paris, mainly through Drouet, the postmaster, who, at an intermediate town, recognised the king.

VARNA, a fortified seaport in Bulgaria, formerly European Turkey. A great battle was fought near this place, 10 Nov 1444 between the Turks under Amurath II. and the Hungarians under their king Ladislaus and John Hunniades. The latter were defeated with great slaughter; the king was killed, and Hunniades made prisoner, who had opposed the Christians breaking the truce for ten years, recently made at Szegedin. The emperor Nicholas of Russia arrived before Varna, the headquarters of his army, then besieging the place, 5 Aug 1828. The Turkish garrison made a vigorous attack on the besiegers, 7 Aug., and another on the 21st, but were repulsed. Varna surrendered, after a sanguinary conflict, to the Russian arms, 11 Oct 1828. It was restored at the peace in 1829; its fortifications were dismantled, but have since been restored. The allied armies disembarked at Varna, 29 May, 1854, and sailed for the Crimea, 3 Sept. They suffered severely from cholera. In conformity with the treaty of Berlin, Varna was evacuated by the Turks, and occupied by Russians, autumn, 1878. Population, 1888, 25,256; 1900, 33,443.

The New Spring Gardens at Vauxhall are mentioned by John Evelyn in his diary 2 July, 1661, Pepys 20 May, 1662, Wycherley 1672, and in the *Spectator* 1711, as a place of great resort. Persons of the most exalted rank were subjected to their decisions, being frequently seized, tried, and executed. The emperors endeavoured to suppress them, but did not succeed till the 16th century. VENNER'S INSURRECTION, see *Anabaptists*, 1661

VENTILATORS were invented by the rev. Dr Hales, and described to the Royal Society of London, May, 1741; and the ventilator for the use of ships was announced by Mr Triewald, in November, same year. The marquis of Chabannes' plan for warming and ventilating theatres and houses for audiences was applied to those of London about 1819. The systems of Dr. Reid (about 1834) and others followed, with much controversy. Dr Arnott's work on this subject was published in 1838. A commission on warming and ventilation issued a report in 1850

VENTRILOQUISM (speaking from the stomach), was known to the Greeks who termed ventriloquists "belly-prophets." The name is a misnomer, as the sounds are produced by regulating the breathing and organs of voice, without motion of the lips. Among eminent ventriloquists were baron Mengen and M Saint Gille, about 1772 (whose experiments were examined by a commission of the French Academy); Thomas King (about 1716); Charles Mathews (1824), and M. Alexandre (1822); others since.

VENUS, the Roman goddess of love and beauty (the Greek Aphrodité) *Statues* Venus de Medicis, found near Tivoli and removed to France, 1680; the Venus found at Milo or Melos, 1820, placed in the Louvre, Paris, 1834. The transit of the planet over the sun was predicted by Kepler to take place 6 Dec. 1631, but was not observed; he died 15 Nov. 1630. The first transit observed, was by the rev. Jeremiah Horrox, or Horrocks, and his friend, Wm. Crabtree, on 24 Nov. 1639, as predicted by

Hoorex in 1633. The astronomer-royal Maskelyne observed her transit at St. Helena, 6 June, 1761. Capt. Cook made his first voyage in the *Endeavour*, to Otaheite, to observe a transit of Venus, 3 June, 1769; see *Cook's Voyages* The diurnal rotation of Venus was discovered by Cassini in 1667. This is contested by Schiaperelli and others, who assert her rotation to be as long as her revolution in her orbit. See *Sun*, note.

Halley suggested the observation of the transit as a means of estimating the distance of the earth from the sun, and devised a method for this purpose 1716
Another method was invented by Delisle about . 1743
Both plans were used in . . Dec 1874
Expeditions for the accurate observation of the phenomena, on 8 Dec. astronomical day; ordinary day, 9 Dec 1874, were sent to different parts of the globe by all the great powers, and favourable results were reported . 1875-6
The transit, on 6 Dec 1882, was observed at Bath, Penzance, Cork, Cape Town, Washington, Melbourne, and many other places The next transits will take place 8 June, 2004, and 6 June, 2012.
Venus was both a morning and evening star, rising 43 min. before the sun, and setting 41 min after it . . . . . 14 Feb 1894
Dr. W. R. Brooks obtained some good photographs by the light of Venus when a morning star, Sept 1900

France, made a magazine for his legions by Julius Cæsar It was acquired by the Franks in the 6th century, and formed part of the dominions of Lothaire by the treaty of Verdun, 843, when the empire was divided between the sons of Louis I. It was taken and annexed to the empire by Otho I about 939. It surrendered to France in 1552, and was formally ceded in 1648. It was taken and held by the Prussians 43 days, Sept.—Oct. 1792 Gen. Beaurepaire, the commandant, committed suicide before the surrender, and 14 ladies were executed on 28 May, 1794, for going to the king of Prussia to solicit his clemency for the town. Verdun surrendered to the Germans 8 Nov. 1870, after a brave defence, two vigorous sallies being made 28 Oct. Above 4000 men were captured, with a large number of arms and ammunition. It was the last place held by the Germans; and was given up 15, 16 Sept. 1873, and the troops retired.

Two thousand English archers came then fresh to the attack; and the French and Scots were totally defeated, and their leaders killed.

VERNON GALLERY. The inadequate manner in which modern British art was represented in the National Gallery was somewhat remedied in 1847 by the munificent present to the nation, by Mr Robert Vernon, of a collection of 157 pictures, all but two being by first-rate British artists. They were first exhibited at Mr. Vernon's house in Pall-mall, next in the vaults beneath the National Gallery, afterwards at Marlborough house, and are now at the South Kensington Museum. In 1857, Mr. John Sheepshanks followed Mr. Vernon's example; see *Sheepshanks' Donations.*

It was taken by Constantine 312, and on 27 Sept. 489 Theodoric defeated Odoacer, king of Italy. Verona was taken by Charlemagne 774. About 1260 Mastino della Scala was elected podestà, and his descendants (the Scaligeri) ruled, till subdued by the Visconti, dukes of Milan, 1387. Verona was conquered by the Venetians 1405, and held by them with some intermissions till its capture by the French general Massena, 3 June, 1796. VERSAILLES (near Paris) was a small village, in a forest thirty miles in circuit; where Louis XIII. built a hunting-seat about 1632. Louis XIV between 1661 and 1687 enlarged it into a magnificent palace, which became the usual residence of the kings of France. By the treaty between Great Britain and the revolted colonies of British North America, signed at Paris, the latter power was admitted to be a sovereign and independent state, 3 Sept. 1783. On the same day a treaty was signed at Versailles between Great Britain, France, and Spain, by which Pondicherry and Carical, with other possessions in Bengal, were restored to France, and Trincomalee restored to the Dutch. Hose was held

Versailles became the residence of Louis-Philippe in 1830. The historical gallery was opened in 1837. Versailles, with the troops there, surrendered to the Germans 19 Sept. 1870, and the crown prince of Prussia entered the next day; and on 26 Sept. he awarded the iron cross to above 30 soldiers at the foot of the statue of Louis XIV. The palace was converted into a hospital. The royal head-quarters were removed here from Ferrières 5 Oct. After the peace, Versailles became the seat of the French government (see *France*), March, 1871. Removed to Paris 27 Nov. 1879. The congress for the revision of the constitution met here 4—13 Aug. 1884. See *France*, 1889.

VERSE, see *Poetry, Hexameter, Elegy, Iambic*, &c. Surrey's translation of part of *Virgil's Æneid* into *blank verse* is the first English composition of the kind, omitting tragedy, extant in the English language (published in 1547). The verse previously used in our grave compositions was the stanza of eight lines, the *ottava rima* (as adopted with the addition of one line by Spenser in his *Faery Queene*), who probably borrowed it from Ariosto and Tasso. Boccaccio introduced it into Italy in his *Teseide*, having copied it from the old French *chansons*. Trissino is said to have been the first introducer of blank verse among the moderns, about 1508. *Voss.*

VESTALS, virgin priestesses, took care of the perpetual fire consecrated to Vesta. The mother of Romulus was a vestal. Numa is said to have appointed four, 710 B.C., and Tarquin added two. Minutia was buried alive for breaking her virgin vow, 337 B.C.; Sextilia, 273 B.C.; and Cornelia Maximilliana, A.D. 92. It is said that only eighteen vestals had been condemned since the time of Numa. The order was abolished by Theodosius, 389.

VESUVIUS, MOUNT, S. Italy. Near it, the Latin confederacy were totally defeated by the Romans, whose general, P. Decius Mus, had devoted himself to death, 340 B.C. By an eruption of Mount Vesuvius, the cities of Pompeii and Herculaneum (*which see*) were overwhelmed 24 Aug. 79 A.D., and more than 200,000 persons perished, among them Pliny the naturalist. Numerous other disastrous eruptions have occurred. Torre del Greco, with 4000 persons, was destroyed, 17 Dec. 1631. One in June, 1794, was most destructive: the lava flowed over 5000 acres of rich vineyards and cultivated land, and Torre del Greco was a second time burned; the top of the mountain fell in, and the crater was nearly two miles in circumference. A great eruption in Oct. 1822, and others in May, 1855, May and June, 1858, caused great destruction. A series of violent eruptions causing much damage occurred in Dec. 1861, and in Feb. 1865. Torre del Greco was again destroyed in Dec. 1861. Another eruption began 12 Nov. 1867, and continued increasing in grandeur and danger, March, 1868. A great eruption began 8 Oct. 1868, and continued, causing much destruction, 19, 20 Nov. A severe eruption began 23 April and ended about 3 May, 1872, above 60 lives were lost. The mountain was disturbed in 1876; and another eruption began about 20 Sept. 1878; lava was spouted to the height of 300 feet; an eruption began 11 June, 1879, an intermittent eruption 2 May, 1885. A new crater formed 7 June; continued flowing of lava, 11 June, ceases 16 June, renewed; a Brazilian tourist fell into the crater, July, 1891. Increasing eruptions, 9 June *et seq.*; active, 13 Sept. 1892. Professor John Phillips' "Vesuvius" was published 1869.

VINCENT, CAPE ST. (S. W. Portugal). *See Cape St. Vincent* and *Rodney's Victories*.

VINCENT, ST. (West Indies), long a neutral island; but at the peace of 1763, the French agreed that the right to it should be vested in the English. The latter soon after engaged in a war against the Caribs, on the windward side of the island, who were obliged to consent to a peace, by which they ceded a large tract of land to the British crown. In 1779 the Caribs greatly contributed to the reduction of this island by the French, who, however, restored it in 1783. In 1795 the French landed some troops, and again instigated the Caribs to an insurrection, which was not subdued for several months. Mt. Soufrière (abt 3,623 ft. high) erupted 24 April, 1718; and again, 1 May, 1812, a violent eruption took place, 3 craters opened, 1,205 dead bodies found, total deaths, 1,565, 100 hopelessly injured, 3,000 homeless, 16 sq. miles covered with lava, ash fell on Barbadoes, 90 miles off; 7 May, 1902, disturbances took place in the adjoining islands, and earthquake shocks were frequent at Kingstown and Georgetown, whilst the village of Wallibou partly sank, and that of Richmond rose, 17 May (*Nature*, 27 May, 1902), eruptions continued, violent, 18, 24 May; earthquake shocks and another eruption, 10 July (*see Martinique*, 8 May, 1902); slighter ones, 21 July *et seq.*; violent, 3, 5, 21 Sept., 10 Oct. VINCENT DE PAUL, ST., CHARITABLE SOCIETY founded in 1833, in France, by twelve young men. It extends its extremely beneficial operations into Britain. Its power excited the jealousy of the French government, which suppressed its central committee of Paris, in Oct. 1801. St. Vincent de Paul was born, 1576; established the congregation of Lazarists, or Vincentines, 1625; Sisters of Charity, 1634; a foundling hospital, 1648. He died 1660.

VINCY, N. France. Here Charles Martel defeated the Neustrians, 21 May, 717, and acquired their country.

VINE. The vine was planted by Noah, 2347 B.C. *Gen.* ix. 20. A colony of vine-dressers from Phocea, in Ionia, settled at Marseilles, and instructed the South Gauls in tillage, vine-dressing, and commerce, about 600 B.C. Some think that vines are aborigines of Languedoc, Provence, and Sicily, and that they grew spontaneously on the Mediterranean shores of Italy, France, and Spain. The vine was carried into Champagne, and part of Germany, by the emperor Probus, about A.D. 279. The vine and sugar-cane were planted in Madeira in 1420. In the gardens of Hampton-court palace is an old and celebrated vine, said to surpass any known vine in Europe; see *Grapes* and *Wine*. The Tokay vines were planted in 1350.

Vine Disease. In the spring of 1845, Mr. E. Tucker, of Margate, observed a fungus (since named *Oidium Tuckeri*) on grapes in the hot-houses of Mr. Slater, of Margate. It is a whitish mildew, and totally destroys the fruit.

The spores of this *oidium* were found in the vineries at Versailles in 1847. The disease soon reached the trellised vines, and in 1850 many lost all their produce.

In 1852, it spread over France, Italy, Spain, Syria, and in Zante and Cephalonia attacked the currants, reducing the crop to one-twelfth of the usual amount.

Through its ravages, the wine manufacture in Madeira ceased for several years.

Many attempts were made to arrest the progress of this disease, but without much effect. Sulphur dust is the most efficacious remedy.

The disease had much abated in France, Portugal, and Madeira, in 1863. In 1862 Californian vines were introduced into the two latter.

VINEGAR. The ancients had several kinds, which they used for drink. The Roman soldiers were accustomed to take it in their marches. The Bible represents Boaz, a rich citizen of Bethlehem, as providing vinegar for his reapers (1312 B.C.), a custom still prevalent in Spain and Italy.

VINEGAR-HILL (near Enniscorthy, in Wexford, S.E. Ireland). Here the Irish rebels, headed by father John, a priest, encamped and committed many outrages on the surrounding country. They were gradually surrounded by the British troops, commanded by Lake, 21 June, 1798, and after a fierce struggle, with much slaughter, totally dispersed.

VIOL AND VIOLIN. The lyre of the Greeks became our harp, and the viol of the middle ages became the violin. The violin is mentioned as early as 1200, in the legendary life of St. Christopher. It was introduced into England, some say, by Charles II. Straduarius (or Stradivarius) of Cremona, was a renowned violin-maker (1700 to 1722). The eminent violinist Paganini visited England, 1831, died at Nice, 27 May, 1840. Mr. J. T. Carrodus, an eminent English violinist, died, aged 59. 12 July, 1895. "Old Violins," by the rev. H. R. VIRGINALS; an early keyed instrument of the kind termed clavichorde; used in the 16th and 17th centuries; played on by queen Elizabeth and Mary queen of Scots. VIRGINIA, see *Rome*, 449 B.C.

VIRGINIA, the first British settlement in North America, was discovered by John Cabot in 1497, and was taken possession of for Raleigh, and named after the virgin-queen Elizabeth, 13 July, 1584. Vain attempts were made to settle it in 1585. Two expeditions were formed by patent in 1606, and others in 1610. In 1626 it reverted to the crown; and a more permanent colony was established soon afterwards. George Washington was delegate for Virginia in the congress of 1774. Eastern Virginia seceded from the Union, 25 April, 1861, but Western Virginia declared for the Union, 13 Feb. and elected a governor, 20 Feb. 1861; became a state 1863. Virginia was a chief seat of the war. The state was readmitted to the congress, Jan.-Feb. 1870; see *United States* and *Richmond*. He expounded his system to the Society of Arts, London, 14 March, 1866, and published a book in 1867.

VISIGOTHS, separated from the Ostrogoths about 330, see *Goths*. The emperor Valens, about 369, admitted them into the Roman territories upon the condition of their serving when wanted in the Roman armies, and Theodosius the Great permitted them to form distinct corps commanded by their own officers In 400, under Alaric, they invaded Italy, and in 410 took Rome. They founded their kingdom of Toulouse, 414; conquered the Alani, and extended their rule into Spain, 414, expelled the Romans in 468, and finally were themselves conquered by the Saracens under Muza, in 711, when their last king, Roderic, was defeated and slain, see *Spain* for a list of the Visigothic kings. VITAL FORCE, defined by Humboldt "as an unknown cause preventing the elements from obeying their primitive affinities" This theory is opposed by many physiologists, and animal motion is attributed to muscular and nervous irritability, illustrated by the researches of Galvani, Humboldt, sir Charles Bell, Marshall Hall, and others. The subject has been much discussed by the late professor Huxley and other eminent physiologists.

VITTORIA (N. Spain), the site of a victory obtained by Wellington over the French army commanded by Joseph Bonaparte, king of Spain, and marshal Jourdan, 21 June, 1813. The hostile armies were nearly equal, from 70,000 to 75,000 each. After a long and fearful battle, the French were driven, towards evening, through the town of Vittoria, and in their retreat were thrown into irretrievable confusion. The British loss was 22 officers and 479 men killed, 167 officers and 2040 men wounded. Marshal Jourdan lost 151 pieces of cannon, 451 waggons of ammunition, all his baggage, provisions, cattle, and treasure, with his baton as a marshal of France. Continuing the pursuit on the 25th, Wellington took Jourdan's only remaining gun. Population, 1887, 27,480; 1897, 30,514.

VIVARIUM, see *Aquavivarium*.

VIVISECTION, physiological experiments upon living animals, as practised by William Harvey, John Hunter, and other eminent physiologists, it is said, with good results The societies for the prevention of cruelty to animals in Dresden and Paris in 1859 requested the opinion of a committee of eminent scientific men on the merits of the knowledge thus acquired. Their judgment was not unanimous. The London society took up the question in 1860; and printed a pamphlet by Mr. G. Macilwain against vivisection. In Aug. 1863 an international conference to discuss the question was held at the Crystal Palace, Sydenham.

The subject was discussed in 1866, and a prize awarded by the London society Sir Charles Bell's opinion of vivisection was, that it either obscured the subject it was meant to illustrate, or misled men into practical errors of the most serious character.

Discussion revived in consequence of the prosecution of Dr Schiff in Florence, who justified vivisection when chloroform or any other anæsthetic is used 1874-6

VOLCANOES In different parts of the earth there are above 200 volcanoes which have been active in modern times, see *Etna*, *Vesuvius*, *New Zealand*, *Ouchyhee*, and *Iceland*. VOLHYNIA, a Polish province, annexed to Russia 1793.

VOLSCI, an ancient Latin people, frequently at war with the Romans From their capital, Corioli, Caius Martius (who defeated them about 490 B.C.) derived his name Coriolanus. The story of his banishment by his ungrateful countrymen; of his revenge on them by bringing the Volsci to the gates of Rome, yet afterwards sparing the city at the entreaties of his mother, Volumnia (487 B.C.), is considered by many as a poetical legend. The Volsci and their allies were totally defeated at Sutrium by the consul Valerius Corvus (346), and incorporated with the Roman people about 338.

VOLSINII, the inhabitants of an Etrurian city, who, after a sharp contest, were completely overcome by the Roman consul Titus Coruncanius 280 B.C.

VOLTAIC PILE or **Battery**, was constructed by Galvani, see *Galvanism* in article *Electricity* The principle was discovered by Alessandro Volta, of Como (born 1745), for thirty years professor of natural philosophy at Pavia, and announced by him to the Royal Society of London in 1793. The battery was first set up in 1800. Volta was made an Italian count and senator by Napoleon Bonaparte, and was otherwise greatly honoured While young he invented the electrophorus, electric pistol, and hydrogen lamp. He died in 1826, aged 81. The form of the Voltaic battery has been greatly improved by the researches of modern philosophers. The nitric acid battery of sir W. R. Grove was

constructed in 1839; Alfred Smee's battery in 1840; the carbon battery of professor Robert Bunsen (died 16 Aug. 1899) in 1842. The first is very much used in this country; that of Bunsen on the continent; see *Copper-Zinc Couple* and *Italy*, 1800.

VOLTURNO, a river in S Italy, near Capua, near to which Garibaldi and his followers held a strong position. This was furiously assailed by the royal troops on 1 Oct 1860, who were finally repulsed after a desperate struggle, the fiercest in which Garibaldi had yet been engaged. He was aided greatly by a band of Piedmontese from Naples. On 2 Oct general Bixio completed the victory by capturing 2500 fresh Neapolitan troops and dispersing others.

VOLUNTARY CONTRIBUTIONS. Public contributions for the support of the British government against the policy and designs of France amounted to two millions and a half sterling in 1798. About 200,000*l.* were transmitted to England from India in 1709. Sir Robert Peel, of Bury, among other contributions of equal amount, subscribed 10,000*l.* *Annual Register*, see *Patriotic Fund*. In 1862 nearly a million pounds were subscribed in the British empire for the relief of the Lancashire cotton spinners, see *Cotton* and *Mansion House*, where voluntary contributions for beneficent purposes are continually received.

VOLUNTARY SCHOOLS, see *Education*.

VOLUNTEERS were enrolled in England for the American war, 1778, and especially in consequence of the threatened invasion of revolutionary France, 1793-4. Besides our large army, and 85,000 men voted for the sea, we subsidised 40,000 Germans, raised our militia to 100,000 men, and armed the citizens as volunteers, the yeomanry formed cavalry regiments. Between 1798 and 1804, when this force was of greatest amount, it numbered 410,000, of which 70,000 were Irish.* On 26 Oct. 1803, king George III reviewed in Hyde Park 12,401 London volunteers, and on 28 Oct 14,676 more. The English volunteers were, according to official accounts, 341,000 on 1 Jan 1804, see *Naval Volunteers*. In May, 1859, in consequence of the prevalence of the fear of a French invasion, the formation of volunteer corps of riflemen commenced under the auspices of the government, and by the end of the year many thousands were enrolled in all parts of the kingdom. The volunteers were said to be "a force potentially the strongest defence of England," 19 April, 1870. Dr J. C. Bucknill, regarded as the originator of the movement, knighted, May, 1804, see *Artillery Association* and *Naval Artillery Volunteer Force*.

* The first regiment of Irish volunteers was formed at Dublin, under command of the duke of Leinster, 22 Oct. 1779. They armed generally to the amount of 20,000 men, and received the unanimous thanks of the houses of lords and commons in Ireland, for their patriotism and spirit, for coming forward and defending their country. At the period when the force appeared Irish affairs bore a serious aspect, manufactures had decreased, and foreign trade had been hurt by a prohibition of the export of salted provisions and butter. No notice of the complaints of the people had been taken in the English parliament, when owing to the alarm of an invasion, ministers allowed the nation to arm, and an immense force was soon raised. The Irish took this occasion to demand a free trade, and government saw there was no trifling with a country with arms in its hands. The Irish parliament unanimously addressed the king for a free trade, and it was granted 1779.

Since 1902 there have been no manœuvres of volunteers on an extensive scale, but there have been great musters of brigades last August at various stations On Salisbury plain there have been combined operations by volunteers and regulars. *Attendance at camp.* - In 1902 a new code of conditions governing volunteer efficiency was issued, which included a clause of a most drastic character, requiring attendance *nolens volens* at a camp for 6 days. Practically the clause was not to come into effect until 1904. This clause was received with a great amount of consternation, and a crisis occurred, the strength of nearly every corps being rapidly depleted by the resignations of officers, non-commissioned officers and men. From time to time the War office made various concessions, until at last the obnoxious clause was practically withdrawn, but not until great mischief had been caused. Some corps are gradually recovering their former strength, but the establishment of a number was reduced. In the early part of 1903 a royal commission was appointed to inquire into the conditions of service and efficiency of the force, and the report of this commission was issued in June, 1904, but nothing has been carried out so far except the re-organisation of volunteer brigades.

VULGATE (from *vulgatus*, published), a term applied to the Latin version of the Scriptures which is authorised by the council of Trent (1546), and which is attributed to St Jerome, about 384. The older version, called the Italic, is said to have been made in the beginning of the 2nd century. A critical edition was printed by order of pope Sixtus V in 1590, which, being considered inaccurate, was superseded by the edition of pope Clement VIII in 1592. The earliest printed vulgate is without date, by Gutenburg and Fust, probably about 1455, the first dated (Fust and Schoeffer) is 1462.

WAGES IN ENGLAND The wages of sundry workmen were first fixed by act of parliament 25 Edw III 1350 Haymakers had but one penny a day Master carpenters, masons, tilers, and other coverers of houses, had not more than 3*d* per day (about 9*d* of our money), and their servants 1½*d*. *Viner's Statutes.**

By the 23 Henry VI the wages of a bailiff of husbandry was 23*s* 4*d* per annum, and clothing of the price of 5*s* with meat and drink; chief hind, carter or shepherd, 20*s* clothing 4*s*; common servant of husbandry, 15*s*, clothing, 4*s*; woman servant, 10*s*, clothing, 4*s* 1444

By the 11 Henry VII, a like rate of wages with a little advance as, for instance, a free mason, master carpenter, rough mason, bricklayer, master tiler, plumber, glazier, carver or joiner, was allowed from Easter to Michaelmas to take 6*d* a day without meat and drink, or, with meat and drink, 4*d*, from Michaelmas to Easter, to abate 1*d*. A master having under him six men was allowed 1*s* a day extra . . 1495

Agricultural labourers per week Warwickshire, 4*s* 6*d* and 4*s*; Devonshire, 6*s*; Suffolk, 5*s* and 6*s*; wool weavers, about 3*s* and 4*s* (Macaulay) about 1685

In 1866 the annual amount of wages paid in the United Kingdom was estimated by Mr Gladstone at £250,000,000, by Mr Bassat at £300,000,000, and by professor Leone Levi at £418,500,000, earned by 10,767,000 workers, ages 20 to 65

In 1872-3 many trades struck for increase of wages and frequently were successful, in 1877-9 unsuccessful

In 1867 professor Levi estimated that £913,000,000 were earned (by men, £650,000,000, by women, £113,000,000), after deducting for holidays, &c., £422,750,000

Leroy says, that "In no other country are wages more liberal, but in no other country are they more wastefully used" See *Strikes*

WAGGONS were rare in the 18th century They, with carts, &c., not excepting those used in agriculture, were taxed in 1783 The carriers' waggons are now nearly superseded by the railways.

WAGHORN'S NEW OVERLAND ROUTE TO INDIA Lieut. Waghorn devoted a large portion of his life to connect India with England. On 31 Oct. 1845, he arrived in London, by a new route, with the Bombay mail of the 1st of that month. His despatches reached Suez on the 19th, and Alexandria on the 20th, whence he proceeded by steamboat to a place twelve miles nearer London than Trieste. He hurried through Austria, Baden, Bavaria, Prussia, and Belgium, and reached London at half-past four on the morning of the first-mentioned day. The authorities of the different countries through which he passed eagerly facilitated his movements. The ordinary express, via Marseilles, reached London 2 Nov. following. Mr. Waghorn subsequently addressed a letter to the *Times* newspaper, in which he stated that in a couple of years he would bring the Bombay mail to London in 21 days. He died 8 Jan. 1850. On 3 Feb. 1884, at a meeting at the Mansion-house, London, it was determined to erect a national monument to his memory

The Overland Mail, which had left Bombay on 1 Dec 1845, arrived early on the 25th in London, by way of Marseilles and Paris The speedy arrival was owing to the great exertions made by the French government to show that the route through France was shorter and better.

WAGRAM, a village near Vienna, where Napoleon I totally defeated the archduke Charles, 5, 6 July, 1809 The slaughter on both sides was dreadful, 12,000 Austrians were taken by the French, and the defeated army retired to Moravia. An armistice was signed on the 12th; and on 24 Oct., by a treaty of peace, Austria ceded all her sea-coast to France; the kingdoms of Saxony and Bavaria were enlarged at her expense; part of Poland in Galicia was ceded to Russia; and Joseph Bonaparte was recognised as king of Spain.

WAHABEES OR WAHABITES, a warlike Mahometan reforming sect, considering themselves the only true followers of the prophet, established, themselves in Arabia about 1750, under the rule of Abd-el-Wahab, who died 1787. His grandson, Saoud, in 1801, defeated an expedition headed by the caliph of Bagdad. In 1803 this sect seized

Mecca and Medina, and continued their conquests, although their chief was assassinated in the midst of his victories. His son, Abdallah, long resisted Mahommed Ali, pacha of Egypt, but in 1818 was defeated and taken prisoner by Ibrahim Pacha, who sent him to Constantinople, where he was put to death. The sect is well described by Mr. W. Gifford Palgrave in his "Journey and Residence in Arabia in 1862-3," published in 1865.

WAITS, the night minstrels who perform shortly before Christmas. The name was given to the musicians attached to the king's court. We find that a company of waits was established at Exeter in 1400 to "pipe the watch." The waits in London and Westminster were long officially recognised by the corporation.

WAKEFIELD (W. Yorkshire), an ancient town. Near it a battle was fought between the adherents of Margaret, the queen of Henry VI., and the duke of York, in which the latter was slain, and 3000 Yorkists fell upon the field, 31 Dec. 1460. The earl of Warwick supported the cause of the duke's son, the earl of March, afterwards Edward IV., and the civil war was continued. An art and manufacturing exhibition was opened at Wakefield, 30 Aug. 1865. The Bishoprics act, authorising the establishment of a see at Wakefield, was passed 16 Aug. 1878. The required funds subscribed Jan. 1888. Population, 1881, 30,854; 1891, 33,140; 1901, 41,415.

WAKES, the ancient parish festivals on the saint's day to commemorate the dedication of the church; regulated in 1536, but gradually became obsolete. The annual holiday weeks in Lancashire are known as "wakes."

WALBROOK CHURCH (London), a masterpiece of Sir Christopher Wren, completed in 1679. There was a church here in 1135, and a new church was erected in 1429.

WALCHEREN (an island at the mouth of the Scheldt, Holland). The unfortunate expedition of the British to this isle in 1809 consisted of 35 ships of the line, and 200 smaller vessels, principally transports, and 40,000 land forces, the latter under the command of the earl of Chatham, and the fleet under sir Richard Strachan. For a long time the destination of the expedition remained secret; but before 28 July, 1809, when it set sail, the French journals had announced that Walcheren was the point of attack. Flushing was invested in August, a dreadful bombardment followed, and the place was taken 15 Aug.; but no suggestion on the part of the naval commander, nor urging likewise by officers, could induce the earl to vigorous action, until the period of probable success was gone, and necessity obliged him to return with as many of the troops as disease and an unhealthy climate had spared. The place was evacuated, 23 Dec. 1809. The house of commons instituted an inquiry, and lord Chatham resigned his post of master-general of the ordnance, to prevent greater disgrace; but the policy of ministers in planning the expedition was, nevertheless, approved. The following epigram, of which various readings exist, appeared at the time:—

"Lord Chatham [or *the warrior earl*] with [his] sabre drawn,
Stood waiting for sir Richard Strachan;
Sir Richard, longing [or *eager*] to be at 'em,
Stood waiting for the earl of Chatham."

A lych-gate erected by queen Victoria at Dovercourt parish church, in memory of British soldiers who died thereof disease contracted during the expedition 1809-10, was opened by gen. Gatacre, 22 Sept. 1899.

WALDECK AND PYRMONT, united German principalities, established in 1682. The late reigning family claim descent from the Saxon hero, Wittikind, who flourished about 772. Prince George Victor, born 14 Jan. 1831, succeeded his father, George, 15 May, 1845, died May, 1893, succeeded by Frederic, son, born 20 Jan. 1865. On 22 Oct. 1867, the states approved a treaty of annexation, and the administration was transferred to Prussia 1 Jan. 1868. Population, 1900, 57,918.

WALDENSES (also called Valdenses, Vallenses, and Vaudois), a sect inhabiting the Cottian Alps, derives its name, according to some authors, from Peter de Waldo, of Lyons (1170). They had a translation of the Bible. The Waldenses settled in the valleys of Piedmont about 1375, but were frequently dreadfully persecuted, especially in the 17th century, when Charles I. of England interceded for them (1627-9) and Oliver Cromwell by threats (1655-6) obtained them some degree of toleration. All the Waldensian Barbes or pastors, save two died in the great plague of 1630. Gilles and Gros went to Geneva and Lausanne for Swiss Calvinist ministers to fill the vacancies. The new ministers were no sooner inducted than they deposed the surviving Barbes and abolished all the distinctive teaching and usages of the community, substituting the Genevese model. They were permitted to have a church at Turin, Dec. 1853. They became French subjects when Savoy was annexed by Napoleon III. in 1860. In March, 1868, it was stated that there were in Italy 28 ordained Waldensian ministers and 30 other teachers.

Mr. Thos. Morton, a British merchant, who died 11 Sept. 1897, besides other bequests to religious bodies, left a large sum to the "Waldensian Church in Italy."

WALES, Cambria, Cymru, the land of the Cymry, called by the Romans *Britannia Secunda*. Welsh and Wales are corruptions of Teutonic epithets applied to foreigners, especially Gaul. After the Roman emperor Honorius gave up Britain, Vortigern was elected king of South Britain. He invited over the Saxons to defend his country against the Picts and Scots, but the Saxons perfidiously sent for reinforcements, consisting of Saxons, Danes, and Angles, by which they made themselves masters of South Britain. Many of the Britons retired to Wales, and defended themselves against the Saxons, in their inaccessible mountains, about 447. In this state Wales remained unconquered till Henry II. subdued South Wales in 1157; and in 1282 Edward I. entirely reduced the whole

country, an end being put to its independence by the death of Llewelyn, the last prince.* In 1284 the queen gave birth to a son at Caernarvon, whom Edward styled prince of Wales, now title of the heir to the crown of Great Britain. Wales was united and incorporated with England by act of parliament, 1536, *see Britain, Bards* and *Population*: 1891, 1,518,914; 1901, 1,698,148; 1904, 1,780,640.

* At the commencement of the civil war, Pembroke castle was the only Welsh fortress in the possession of the parliament, and it was entrusted to the command of col Laugharne. In 1648, he, and colonels Powel and Poyer, embraced the cause of the king, and made Pembroke their head-quarters, after the defeat at St. Fagan's, they retired to the castle, followed by an army led by Cromwell. They capitulated, after having endured great sufferings from want of water. Laugharne, Powel, and Poyer were tried by a court-martial, and condemned to death; but Cromwell having been induced to spare the lives of two of them, it was ordered that they should draw lots for the favour, and three papers were folded up, on two of which were written the words, "Life given by God;" the third was left blank. The latter was drawn by colonel Poyer who was shot in London accordingly on the above-mentioned day, after long imprisonment. *Prasecut.*

The Jews ascribed weights and measures to Cain, the Egyptians to Taeuth or Thoth, the Greeks, to Hermes (the Roman Mercury)

The basis of ancient measures was the natural proportions of the human body, the digit, or breadth of the middle part of the first joint of the fore finger, being the lowest unit of the scale

The Egyptian cubit (six palms), under the Pharaohs, was about 18·24 English inches, the cubit of Ptolemy about 21·87 inches; he determined the length of a stadium, and of a degree.

The sacred cubit of the Jews (Newton), 24·7 inches

A multitude of all ranks, estimated at a million and a half of persons, were congregated in the line of route, a distance of three miles, to witness and share in the imposing spectacle.
The military consisted of the household regiments of horse and foot guards, the 2nd battalion of the rifles, a battalion of the Royal Marines, the 33rd regiment, the 17th Lancers, and the 18th Light Dragoons, the regiment of Scots Greys, a body of Chelsea pensioners, and men of different arms of the Indian army.
The body was placed upon a sumptuous funeral car, drawn by twelve horses richly caparisoned, and the coffin was thus seen by the whole of the crowd.
The procession moved about seven o'clock, and it was three o'clock before the body was lowered into the vault beside the remains of Nelson, under the dome of St. Paul's cathedral.

WELLS were dug by Abraham, 1892 B.C., and Isaac, 1804 (*Gen.* xxi. 30, and xxvi. 19). Damascus is said to have introduced well-digging into Greece from Egypt. Norton's "tube-well," patented Oct. 1867, is said to be the invention of Hiram J. Messenger, Stephen Brewer, and Byron Mudge, of New York. The apparatus consists of an iron tube perforated with holes at the lower end, and shod with a steel point, which readily enters the hardest soil when forcibly driven. It was used with great advantage during the civil war 1861-4; by the British in their campaign in Abyssinia in 1867-8; and by the Russians in Khiva, 1873.

WELLS (Somerset). The cathedral church was built by Ina, king of the West Saxons, 704, and by him dedicated to St. Andrew. Other West Saxon kings endowed it, and it was erected into a bishopric in 909, during the reign of Edward the Elder. The present church was begun by Robert, 18th bishop of this see, and consecrated in 1148, and completed by his successors and finally consecrated by Jocelin. The first bishop was Athelm or Adelmus (afterwards bishop of Canterbury). The see was united with Bath (*which see*) in 1088. Population, 1881, 4,634; 1891, 4,822; 1901, 4,849.

WESLEYAN METHODISTS, a sect founded by John Wesley (born 1703, died 1791) and his brother Charles, who in 1727 with a few other students formed themselves into a small society for the purpose of mutual edification by religious exercises. From their strictness of life they were called *Methodists*, in 1729. John Wesley went to Georgia in America, in 1735, with a view of converting the Indians. On his return to England, in 1738, a great change took place in his mind (24 May), he commenced itinerant preaching, and gathered many followers. On finding many churches shut against him, he built spacious meeting-houses in London, Bristol, and other places. The Wesleyan Methodist society, as such, began in 1739. For some time he was united with George Whitefield; but differing with him respecting the doctrine of election, they separated in 1741; see *Whitefield*. Wesley was almost continually engaged in travelling through the United Kingdom. His two leading doctrines were the instantaneousness of conversion, and Christian perfection, or deliverance from all sin. His society was well organised, and he preserved his influence over it to the last. "His genius for government was not inferior to that of Richelieu." *Macaulay.* The deed of declaration, establishing the conference, is dated 28 Feb. 1784. In 1851 there were 428 circuits in Great Britain, with between 13,000 and 14,000 local or lay preachers, and about 920 itinerant preachers, and 6,579 chapels; 8,993 chapels in 1902.

By these disruptions the main body is thought to have lost 100,000 members.—This body in America numbered about a million in 1844, when a division took place on the slavery question.

WESTERN AUSTRALIA, formerly SWAN RIVER SETTLEMENT, which was founded by original Peel in 1829. Registration begins from the

colonial office, and captain (aft. sir James) Stirling, appointed lieut.-gov., Jan. 17, 1829: who arrived at the site in August following. The three towns of Perth, Fremantle, and Guildford were founded same year. In March, 1830, fifty ships, with 2000 emigrants, with property amounting to 1,000,000*l.*, had arrived before hardly any dwellings had been erected or land surveyed. The more energetic settlers left for home, or the neighbouring colonies, and the colony languished for twenty years for want of suitable inhabitants—the first settlers, from their previous habits and rank in life, proving unfit for the rough work of colonisation. In 1848, the colonists requested that convicts might be sent out to them, and in 1849 a band arrived, who were kindly received and well treated. The best results ensued. By 1853, 2000 had arrived, and the inhabitants of Perth had requested that 1000 should be sent out annually. The reception of convicts ceased in after-years, in consequence of the energetic opposition of the other Australian colonies (1865).—The settlement of King George's Sound was founded in 1826 by the government of New South Wales. It was used as a military station for four years. In 1830, the home government ordered the settlement to be transferred to Swan River. Since the establishment of steam communication, the little town of Albany, employed as a coaling station, has become a thriving seaport. It possesses an excellent harbour. WESTERN CHURCH (called also the LATIN or ROMAN) broke off communion with the Greek or Eastern Church, 653; see *Greek Church*. Its history is mainly comprised in that of the popes and of the European kingdoms; see *Popes*. This church was disturbed by the Arian heresy about 345 and 500; by Pelagianism, about 409; by the introduction of image-worship about 600; by the injunction of the celibacy of the clergy and the rise of the monastic orders about 649; by the contests between the emperors and the popes respecting ecclesiastical investitures between 1073 and 1173; by the rise and progress of the Reformation in the 15th and 16th centuries; by the contests between the Jesuits and Jansenists in the 17th and 18th centuries; and by the progress of modern philosophy and rationalism, and by ultramontanism, in the 19th; see *Roman Catholics*.

WESTMINSTER, so called on account of its western situation with regard to St. Paul's cathedral, or from there being formerly a monastery named East Minster, on the hill now called Great Tower-hill. This city joins London at Temple-bar. Formerly Westminster was called Thorney, or Thorney Island: and in ancient times Canute had a palace here, burnt in 1263. Westminster and London were one mile asunder in 1603, when the houses were thatched, and there were mud walls in the Strand. It is said that the great number of Scotsmen who came over after the accession of James I. occasioned the building of Westminster, and united it with London. *Howel's Londinopolis.* See *Parliament*, 1834-52, 1884. WESTMINSTER BISHOPRICS AND DEANERY. At the dissolution of monasteries, Westminster abbey was valued at 3977*l.* per annum; king Henry VIII. in 1539 erected it into a deanery; and in 1540 into a bishopric, and appointed Thomas Thirlby prelate. He was translated to Norwich in 1550, and with him ended the bishopric of Westminster; Middlesex, his diocese, being restored to London. The dean presided until the accession of Mary, who restored the abbot. Elizabeth displaced the abbot, and erected the abbey into a collegiate church of a dean and twelve prebendaries, as it still continues. On the revival of the order of the Bath, in 1725, the dean of Westminster was appointed dean of that order, which honour has been continued. Dr Nicholas Wiseman was created *archbishop of Westminster* by the pope Pius IX. 30 Sept. 1850; see *Papal Aggression*. Dr. Wiseman died 8 Feb. 1865; Henry Manning was consecrated his successor 8 June, following; he died 14 Jan. 1892, and was succeeded by Dr. Herbert Vaughan elected 30 March; enthroned 8 May; invested with the *pallium*, the first since 1550, 16 Aug. 1892; died 19 June, 1903, succeeded by Dr. Bourne, Aug. 24, enthroned 24 Dec. 1903. WESTMINSTER BRIDGES. The handsome old bridge was begun (after a design of M. Labelye), 13 Sept. 1738, the first stone laid 29 Jan. 1738-9; opened for passengers 18 Nov. 1750; cost 426,650*l.* It was built of Portland stone, and crossed the river where the breadth is 1223 feet.

Owing to the sinking of several of its piers, most of the balustrades on both sides were removed, to relieve the structure of its weight.
By 16 & 17 Vict. c. 46 the estates of its commissioners were transferred to her majesty's commissioners of works, who were empowered to remove the then existing bridge, and build a new bridge (near the old one) . . . . 4 Aug. 1853
The contract required the completion of the works by . . . . . 1 June, 1857
The works were suspended for a time, in consequence of the failure of Messrs. Mare, the contractors. The government eventually undertook the building, which they entrusted to Mr. Thomas Page, the engineer. One half of the new bridge was opened for use early in 1860; the whole on 24 May, 1862

WESTMINSTER CONFESSION OF FAITH AND CATECHISMS were drawn up by the "Assem-

Fly of Divines" (partly consisting of laymen), who met by authority of parliament in Henry VII.'s chapel, Westminster, from 1643 to 1647. These have ever since been the doctrinal standards of Scotch Presbyterians.

WESTMINSTER HALL (London), first built by William Rufus in 1097, for a banqueting-hall; and here in 1099, on his return from Normandy, "he kept his feast of Whitsuntide very royally." The hall became ruinous before the reign of Richard II., who repaired it in 1397, raised the walls, altered the windows, and added a new roof, as well as a stately porch and other buildings. In 1236 Henry III. on New-year's day caused 6000 poor persons to be entertained in this hall, and in the other rooms of his palace, as a celebration of queen Eleanor's coronation; and here Richard II. held his Christmas festival in 1397, when the number of the guests each day the feast lasted was 10,000. *Stow.* The courts of law were established here by king John *Idem.* Westminster hall was stated to be the largest room in Europe unsupported by pillars (except a hall of justice at Padua); it is 270 feet in length, 74 feet broad. The hall underwent a general repair in 1802. Concurrently with the erection of the palace of Westminster, many improvements and alterations have been made in this magnificent hall. The Volunteer Rifle corps were drilled in the hall in the winter of 1859, and since. The courts of law removed to the new buildings in the Strand Jan 1883 Restorations proposed by Mr. J. L. Pearson, R A., July, 1884. The roof and windows greatly damaged by an explosion of dynamite about 2 p.m. 24 Jan. 1885

It is situated within the abbey enclosure Besides the scholars on the foundation, many of the nobility and gentry send their sons to Westminster for instruction. The annual performance by the scholars of a Latin play is in conformity with the statute of queen Elizabeth. A proposal in 1860 to remove the school was disapproved of in 1861.

On the secularization in 1802, it was made over to Hesse Darmstadt; and in 1814 was ceded for an equivalent to Prussia. The *kingdom* of Westphalia, one of the temporary kingdoms of Bonaparte, composed of conquests from Prussia, Hesse-Cassel, Hanover, and the smaller states to the west of the Elbe, was created by decree 18 Aug. 1806, and Jerome Bonaparte appointed king, 1 Dec. 1807. Hanover was annexed to it, 1 March, 1810. The kingdom was abolished in 1813, and the countries were restored to their former rulers.

WHALE-FISHERY, it is said, was first carried on by the Norwegians in the ninth century *Langlet.* Whales were killed at Newfoundland and Iceland, for their oil only, 1578; the use of their fins and bones was not yet known, consequently (a writer adds) no stays were worn by the ladies. The English whale-fishing commenced at Spitzbergen in 1598; but the Dutch had been previously fishing there. The fishery was much promoted by an act of parliament passed in 1749. From 1600 to 2000 whales have been killed annually on the coast of Greenland, &c. The quantity of whale oil imported in 1814 was 38,567 tuns; in 1824, when gas-light became general, 25,000 tuns; in 1830 about 22,000

WHARNCLIFFE MEETINGS of public companies (held to give enlarged powers under certain prescribed conditions) are so called because the standing orders of the house of lords, under which they are held, were introduced by lord Wharncliffe, about 1846.

WHEAT. The Chinese ascribe to their emperor, Ching-Noung, who succeeded Fohi, the art of husbandry, and method of making bread from wheat, about 2000 years before the Christian era. Wheat was introduced into Britain in the 6th century, by Coll ap Coll Frewi. *Roberts.* The first wheat imported into England of which we have a note was in 1347. Various statutes have regulated the sales of wheat, and restrained its importation, in order to encourage its being raised at home. In 1802 attention was drawn to the probable utility of considering the pedigree of wheat. In 1871 it was estimated that 3,571,804 acres in the United Kingdom were devoted to wheat; in 1876, 3,124,342. See *Bread* and *Corn Laws*. Greatest producers (in order), United States, Russia, France, Great Britain, &c. The wheat crop for Great Britain is said to have yielded 71,939,647 bushels in 1888; 37,176,257 in 1895. See *Corner*, 1898, and *Agriculture*, 1843. "The Wheat Problem," by sir Wm. Crookes, published, 1899. Steady shrinkage of area assigned to wheat, reported, Sept. 1901, and since.

WHEEL, BREAKING ON THE. A barbarous mode of death, of great antiquity, ordered by Francis I. for robbers, about 1535, see *Ravaillac*.

"The Great Wheel," made of steel (300 ft. high, axle 7 ft. in diameter, supported on 8 columns 150 ft. high). 40 cars are swung round the wheel, each capable of holding about 40 persons, with adjuncts; the wheel was designed and constructed by Mr. Bassett. The wheel was named by lady Dorothy Nevill, and started, carrying several hundreds of people at the Empire of India exhibition, Earl's Court, the revolution being successfully accomplished in about 40 minutes, 6 July, 1895. Through a stoppage of the machinery, between 60 and 70 persons were detained 16 hrs. in the upper cars, 21–22 May, 1896.

WHIGS. In the reign of Charles II. the name *Whig* was a term of reproach given by the court party to their antagonists for holding the principles of the "whigs," or fanatical covenanters in Scotland; and in return the name *Tory* was given to the court party, comparing them to the Tories, or popish robbers in Ireland. *Baker.* The distinction arose out of the discovery of the Meal-tub plot (*which see*) in 1678. Upon bringing up the meal plot before parliament, two parties were formed: the ones who doubted the plot styled those who believed in it *Whigs*; these styled their adversaries *Tories*. In time these names, given as marks of opprobrium, became honoured distinctions. *Hume.* The Whigs brought about the revolution of 1688–9, and established the protestant succession. They were chiefly instrumental in obtaining the abolition of the slave trade and slavery, the repeal of the Test and Corporation act, Catholic emancipation, parliamentary and municipal reform, the repeal of the corn laws, and similar measures. The Whig Club was established by Charles James Fox; one of its original members was the great Francis, duke of Bedford, who died in 1802. See *Liberal*. Of the principal Whig ministries, see *Rockingham*,

Rockingham, Grenville, Grey, Melbourne, Russell, Palmerston, and Gladstone.

WHIP, the popular title of the patronage secretary of the treasury, whose duty it is to collect members to make a house on important occasions, &c. It is the duty of both conservative and liberal whips to promote the interest of their party in every conceivable way.

The management of the house of commons by bribery is said to have begun with Clifford of the "Cabal" ministry, and continued by Whigs and Tories. Mr. Roberts (under Henry Pelham), is said to have paid members sums of 1,000*l.*, 500*l.*, &c., at the close of a session for their support. *Wraxall.*

WHISKY, the spirit distilled from malt and other corn in Scotland and Ireland, of which about eight millions of gallons have been distilled annually in the former, and upwards of nine millions of gallons in the latter. The duty upon this article once produced annually about three millions. The distillation of whisky is referred to the 16th century; but some authors state it to have been earlier; see *Distillation*. In 1855 the duties on spirits distilled in Scotland and Ireland were equalised with those distilled in England. *Women's Whisky War*, see *United States*, 1874.

WHIST, a game at cards, became general at the end of the 17th century.

Edmund Hoyle, who published his "Short Treatise" about 1742, died in 1769, aged 97; lord Peterborough introduced short whist early in the past century; the laws were revised in 1864

WHITBY, N.R. Yorkshire. The monastery here, under St. Hilda, founded by king Oswy, 657, destroyed by the Danes 870, was restored by William de Percy about 1100. The Cholmleys established alum works here in 1615. Whitby was made a borough in 1832, and absorbed into the county in 1885. Population, 1881, 14,086; 1891, 13,274; 1901, 11,748.

WHITEBAIT DINNER, when the cabinet ministers met at the end of each session, is said to have begun at the end of the 18th century, through sir Robert Preston and Mr. George Rose inviting Mr. Pitt and his colleagues to dine at Dagenham, and afterwards at Greenwich. Another account dates its origin in 1721. The annual whitebait dinner, stopped by the Gladstone ministry, was revived by the Disraeli ministry, 1 Aug. 1874, and continued by the Gladstone, 1 Sept. 1880. No dinner since 1883; was revived by the Rosebery ministry, 15 Aug. 1894. The whitebait (*clupea alba*) is a subject of controversy. Albert Günther, of the British Museum, in his Catalogue of Fishes, says the whitebait is "a purely nominal species," and that all the examples which he has examined were young herrings (1868).

At the inquiry in June, 1878, James Henry Cannon, fisherman, claimed the discovery of the fish for his grandfather, Richard, who named it 1780. It was mentioned in a letter in the life of lord Malmesbury, 2 July, 1763.

WHITEBOYS, a body of ruffians in Ireland, so called on account of their wearing linen frocks over their coats. They committed dreadful outrages in 1761, but were suppressed by a military force, and their ringleaders executed in 1762. They rose and were again suppressed in 1786-7. The insurrection act was passed on their account in 1822.

WHITE DOVES, a South Russian religious sect, said to be wealthy and superstitious, strongly advocating celibacy: under a chief named Koudrine. Members were tried for moral offences about April, 1876.

WHITEFIELDITES. George Whitefield, the founder of the "*Calvinistic Methodists*," born

1714, was the son of an innkeeper at Gloucester, where he received his first education. He was admitted a servitor at Oxford in 1732, became a companion of the Wesleys there, and aided them in establishing Methodism. He parted from them in 1741, on account of their rejection of the doctrine of election. He was the most eloquent preacher of his day. His first sermon was preached in 1736, and he commenced field preaching in 1739. He is said to have delivered 18,000 sermons during his career of 34 years. He visited America in 1737, 1739, and 1744. His followers are termed "the countess of Huntingdon's connexion," from his having become her chaplain in 1748, and from her energetic support of the sect, by establishing a college at Trevecca, 1767. See *Spafields*. There were 109 chapels of this connexion in 1851; 36 chapels in 1890, but many of his followers have joined the Independents. He died 30 Sept. 1770, and the countess died 17 June, 1791; see *Tabernacle*.

WHITE FRIARS, see *Carmelites* and *Sanctuaries*.

WHITEHALL (London), built by Hubert de Burgh, earl of Kent, before the middle of the 13th century. It afterwards devolved, by bequest, to the Black Friars of Holborn, who sold it to the archbishop of York, whence it received the name of York-place, and continued to be the town residence of the archbishops till taken by Henry VIII from cardinal Wolsey, in 1530. At this period it became the residence of the court. Queen Elizabeth, who died at Richmond in 1603, was brought from thence to Whitehall, by water, in a grand procession. It was on this occasion, Camden informs us, that the following quaint panegyric on her majesty was written:

"The queen was brought by water to Whitehall,
At every stroke the oars did *tears* let fall
More clung about the barge: fish under water
Wept out their *eyes* of *pearl*, and swam blind after.
I think the bargemen might, with easier thighs,
Have rowed her thither in her people's eyes,
For howsoe'er thus much my thoughts have scann'd,
She had come by *water*, had she come by *land*."

Whitehall was partly burnt 9-10 April, 1691; totally destroyed by fire, 4 Jan. 1697-8, except the banqueting-house, which had been added to the palace of Whitehall by James I., according to a design of Inigo Jones, in 1619. In the front of Whitehall Charles I. was beheaded 30 Jan. 1649. George I. converted the hall into a chapel 1723-4. The exterior of this edifice underwent repair between 1829 and 1833. The chapel was ordered to be permanently closed, 28 Oct. 1890; lent during queen Victoria's reign, to the Royal United Service Institution, from 1 Jan. 1891; first meeting held, 7 March, 1891. "Old Palace of Whitehall," by ven. Edgar Sheppard, D.D., published 1902.

WHITE HATS, a party in the Low Countries formed about 1377, against Louis, count of Flanders. The struggle lasted till 1384, when it was settled by Philip, duke of Burgundy.

WHITE SHEEP, a name given to the Turcomans who conquered Persia about 1468, and persecuted the Shiites, but were expelled by Ismail, who founded the Sophi dynasty in 1501.

WHITE TOWER, the keep or citadel in the Tower of London, a large, square, irregular building, erected in 1070 by abbot Gundulph, afterwards bishop of Rochester. It measures 116 feet by 96, and 92 feet in height: the walls, which are 11 feet thick, having a winding staircase continued along two of the sides, like that in Dover Castle. It contains an extensive armoury. Within this tower is the ancient chapel of St. John, originally used by the English monarchs. The turret at the N.E. angle, the highest of the four by which the White Tower is surmounted, was used for astronomical purposes by Flamsteed previously to the erection of the royal observatory at Greenwich.

WHITSUNTIDE, a festival appointed to commemorate the descent of the Holy Ghost upon the apostles, the newly-baptized persons, or catechumens, are said to have worn white garments on Whitsunday. This feast is movable, being always exactly seven weeks after Easter. Rogation week (*which see*) is the week before Whitsunday.

Whitsunday, a Scotch quarter-day, is always on 15 May, as settled by an act of 1693, but local usage varies.

WHITTINGTON'S CHARITIES. Sir Richard Whittington, a citizen and mercer of London, served the office of lord mayor three times, the last in 1419. Many false stories are connected with his name, and his munificent charities are little known. He founded his college, dedicated to the Holy Ghost and the Virgin Mary, in 1424; and his almshouses in 1429; the latter, originally built in London, now stand on Highgate-hill (built 1808) near the supposed site of the stone which commemorated the legend of his return to London, after leaving it in despair.

WHITWORTH FOUNDATIONS. Mr. (afterwards sir) Joseph Whitworth, the eminent engineer (born 21 Dec. 1803; died 22 Jan. 1887), in a letter to the first lord of the treasury, dated 18 March, 1868, offered to found 30 scholarships of the annual value of 100*l.* each, to be applied for the further instruction of young men, natives of the United Kingdom, selected by open competition for their intelligence and proficiency in the theory and practice of mechanics and its cognate sciences, with a view to the promotion of engineering and mechanical industry in this country; and he expressed hopes that means might be found for bringing science and industry into closer relation with each other than at present obtains here. This offer was accepted by the lords of the committee of the privy council, 28 March, 1868. In 1875, sir Joseph assigned an estate to support these scholarships. For the results of sir Joseph Whitworth's will, see *Manchester*, 1888-90.

"WHOLE DUTY OF MAN;" (the authorship doubtfully attributed to abps. Sancroft, Frewen, and Sharpe; to bishops Fell and Chapel; to Dorothy, lady Packington, and others;) first published, 1659. *Lowndes.* It is attributed by some to John Isham.

WICKLIFFITES, the followers of John Wickliffe (born 1324), a professor of divinity in the university of Oxford and rector of Lutterworth in Leicestershire. He was a forerunner of the reformation of the English Church from popery, being among the first who opposed the authority of the pope, transubstantiation, the celibacy of the clergy, &c. Wickliffe, protected by John of Gaunt, Edward's son and Richard's uncle, was virulently persecuted by the church, and only saved from martyrdom by a paralytic attack, which caused his death, 31 Dec. 1384, in his 60th year. The Council of Constance, in 1414, decreed his bones to be disinterred and burnt, which was done by the bishop of Lincoln, and his dust was cast into the river Swift, 1425. Wickliffe's English version of the Bible was commenced in 1380; a noble edition of it was printed at Oxford in 1850. *Wycliff Society*, founded in 1882 to publish his works. Quincentenary of his death celebrated in London, &c., 21 May, 1884. See *Lollards*. A band of protestants organised by the late Mr. Kenalt under the name of Wickliffites has been active in carrying on an anti-ritualistic propaganda.

WIDOWS. The Jewish law required a man's brother to marry his widow if without children (1490 B.C.). *For* the burning of widows in India, see *Suttee*. Among the numerous associations in London for the relief of widows are, one for the widows of musicians, instituted in 1738; for widows of naval men, founded in 1739; for widows of medical men, 1788; a law society, for widows of professional gentlemen, 1817; and a society for artists' widows, 1827. —WIDOWERS were taxed in England as follows: a duke, 12*l.* 10*s.*; lower peers, smaller sums; a common person, 1*s.*; 7 Will. WIGAN (Lancashire). The king's troops, commanded by the earl of Derby, were defeated and driven out of the town in 1643 by the parliamentary forces under sir John Smeaton. The earl was again defeated by colonel Ashton, who razed the fortifications of Wigan to the ground, same year; and once more by a greatly superior force commanded by colonel Lilburne, 1651. In this last engagement, sir Thomas Tildesley, an ardent royalist, was slain; a pillar was erected to his memory in 1679. The colliers in the neighbourhood struck, and acting riotously 17, 18 April, 1868, were quelled by the military. Arrangements were soon after made with the employers. The prince and princess of Wales at their visit, 4 June, 1873, opened a new hospital, &c., and received a hearty welcome. See *Railway Accidents*, 2 Aug. 1873. Population, 1881, 48,194; 1891, 54,013; 1901, 66,774; 1904, 62,800.

WIGHT, ISLE OF, the Roman *Vecta* or *Victis*, was conquered by Vespasian in the reign of Claudius. It was conquered by the Saxons under Cerdic about 530; by the Danes, 787, and in 1001, when they held it for several years. It was invaded by the French, July, 1377, and has several times suffered from invasion by them. In 1442, Henry VI. alienated the Isle to Henry de Beauchamp, first premier earl of England and then duke of Warwick, and afterwards crowned him king of the Isle of Wight, with his own hands; but dying without heirs male, his regal title died with him, and the lordship of the isle returned to the crown. Charles I., after his flight from Hampton-court, was a prisoner in Carisbrook castle, in 1647. In the time of Charles II. timber was very plentiful. In this isle was queen Victoria's marine residence, Osborne-house, which she bequeathed to king Edward VII.; he gave it to the nation to be used as a convalescent home for officers in the navy and army), 9 Aug. 1902. WILLS AND TESTAMENTS are of very high antiquity, see *Genesis* xlviii. The private will of Sennacherib, king of Assyria, 680 B.C., found at Nineveh, is translated in *Records of the Past*, Vol I. Solon introduced them at Athens, 578 B.C. There are regulations respecting wills in the Koran. Trebatius Testa the civilian, introduced codicils to wills at Rome, 31 B.C. The power of bequeathing lands by the last will and testament of the owner was confirmed to English subjects 1 Henry I. 1100; but with great restrictions and limitations respecting the feudal system, which were taken off by the statute of 32 Hen. VIII. 1541. *Blackstone's Commentaries.* The first will of a sovereign on record is stated (but in error) to be that of Richard II. 1399; Edward the Confessor made a will, 1066. Various laws have regulated the wills and testaments of British subjects. All previous statutes were repealed by the "Wills Act," 7 Will. IV. & 1 Vict. c. 26, 1837, and the laws

with relation to wills amended.* The present Probate Court (*which see*) was established in 1857. An office for the reception of the wills of living persons was opened in Jan. 1861. See *Thellusson's Will, Legacies, Estate, Succession Duties, Trusts*, 1 April, 1897. In 1869 twenty probates of wills or letters of administration were stamped for personal property, each exceeding a quarter of a million; one had a stamp of 21,000*l*. The Wills Office, removed from Doctors' Commons to Somerset House, was opened 24 Oct. 1874.

The will of Peter the Great, described in the "*Mémoires de la Chevalière d'Eon*," as a "plan for compassing European supremacy," left for his successors, and deposited in the archives of the palace of Peterhoff near St. Petersburg. It advocated "approach as near as possible to Constantinople, and towards the Indies: wars with Turkey and Persia; possession of the shores of the Black Sea, and the Baltic;" &c. The existence of the will (denied by the czars) was first announced by M. Lesur in his "*Progrès de la Puissance Russe*," published at Paris in 1812. In 1863, Dr Berkholz of Riga asserted that the will was a forgery, probably dictated by Napoleon I. Mr. W J. Thoms, the antiquary, and others, contend for the genuineness of the will, June, 1878.

EXTRACTS FROM THE LAST WILL OF NAPOLEON I., EMPEROR OF FRANCE.†

The following are part of the eight *Codicils* to the preceding will of the emperor:—

"On the liquidation of my civil list of Italy—such as money, jewels, plate, linen, coffers, caskets of which the viceroy is the depository, and which belong to me, I dispose of two millions, which I leave to my most faithful servants. I hope that without their showing any cause, my son Eugene Napoleon will discharge them faithfully. He cannot forget the forty millions which I have given him in Italy, or by the right (*parage*) of his mother's inheritance.

"From the funds remitted in gold to the empress Maria Louisa, my very dear and well-beloved spouse, at Orleans, in 1814, there remain due to me two millions, which I dispose of by the present codicil, in order to recompense my most faithful servants, whom I beside recommend to the protection of my dear Maria Louisa. I leave 200,000 francs to count Montholon, 100,000 francs of which he shall pay into the chest of the treasurer (Las Cases) for the same purpose as the above, to be employed according to my dispositions in legacies of conscience.

"10,000 francs to the sub-officer Cantillon (died July, 1869), who has undergone a prosecution, being accused of a desire to assassinate lord Wellington, of which he has been declared innocent. Cantillon had as much right to assassinate that oligarch, as the latter had to send me to perish on the rock of St. Helena," &c. &c. &c.

LETTER TO M. LAFITTE.

"MONSIEUR LAFITTE,—I remitted to you in 1815, at the moment of my departure from Paris, a sum of nearly six millions, for which you gave me a double receipt. I have cancelled one of these receipts, and I have charged comte de Montholon to present to you the other receipt, in order that you may, after my death, deliver to him the said sum with interest at the rate of five *per cent.*, from the 1st of July, 1815, deducting the payments with which you have been charged in virtue of my order. I have also remitted to you a box containing my medallion. I beg you will deliver it to comte Montholon.

"This letter having no other object, I pray God, Monsieur Lafitte, that He may have you in His holy and worthy keeping.

The following WILL OF NAPOLEON III. was published in the *Times*, 30 April, 1873:—

"April 24, 1865.

"This is my will. I commend my son and my wife to the high constituted authorities of the state (*aux grands corps de l'Etat*), to the people, and the army. The empress Eugénie possesses all the qualities requisite for conducting the regency well, and my son displays a disposition and judgment which will render him worthy of his high destinies. Let him never forget the motto of the head of our family, 'Everything for the French people.' Let him fix in his mind the writings of the prisoner of St. Helena; let him study the emperor's deeds and correspondence, finally, let him remember, when circumstances so permit, that the cause of the people is the cause of France. Power is a heavy burden, because one cannot always do all the good one could wish, and because your contemporaries seldom render you justice, so that, in order to fulfil one's mission, one must have faith in, and consciousness of, one's duty. It is necessary to consider that from heaven on high those whom you have loved regard and protect you: it is the soul of my illustrious uncle that has always inspired and sustained me. The Rest will apply to my son, for he will always be worthy of his name. I leave to the empress Eugénie all

my private property. It is my desire that on the majority of my son she shall inhabit the Elysée and Biarritz. I trust that my memory will be dear to her, and that after my death she will forget the griefs I may have caused her. With regard to my son, let him keep as a talisman the seal I used to wear attached to my watch, and which comes from my mother; let him carefully preserve everything that comes to me from the emperor, my uncle, and let him be convinced that my heart and my soul remain with him. I make no mention of my faithful servants. I am convinced that the empress and my son will never abandon them. I shall die in the Catholic, Apostolic, and Roman religion, which my son will always honour by his piety. Done, written, and signed with my hand at the palace of the Tuileries, the 24th of April, 1865. (Signed) "NAPOLEON."

The WILL OF PRINCE LOUIS NAPOLEON was written with his own hand, and signed 26 Feb. 1879, the night *before* he sailed for South Africa (where he was killed while on a reconnoitring party, 1 June, 1879). Rouher, and others; and assigns to Victor, the eldest son of prince Napoleon Jerome, the task of continuing the work of Napoleon I. and Napoleon III. Executors, MM. Rouher and Pietri.

WINCHESTER (Hampshire), a most ancient city, whose erection may reasonably be ascribed to the Celtic Britons, with the fabulous date 392 B.C. It was made the capital of the West Saxon kingdom under Cerdic, about 520; and of England by Egbert, 827; it became the residence of Alfred, 879-991. In the reign of William I. London began to rival it; and the destruction of religious houses by Henry VIII. almost ruined it. Several kings resided at Winchester, and many parliaments were held there. Memorials of its ancient superiority exist in the national denomination of measures of quantity, as Winchester ell, Winchester bushel, &c., the use of which has but recently been replaced by imperial measures. The cathedral church was first founded and endowed by Cynegils, or Kenegilsus, the first Christian king of the West Saxons. Becoming ruinous, the present fabric was begun by bishop Walkelyn, the 34th bishop, 1073; repairs to the roof began March, 1896; completed (cost, 12,670*l.* 10*s.* 11*d.*) Dec. 1898. The church was first dedicated to St. Amphibalus, then to St. Peter, and afterwards to St. Swithin, once bishop here. Dedicated to the Holy Trinity by Henry VIII. St. Birinus was the first bishop of the West Saxons, his seat Dorchester, 636; Wina, in 660, was the first bishop of Winchester. The see is valued in the king's books at 2793*l.* 4*s.* 2*d.* annually. Present income, 6,500*l.* Population, 1881, 17,780; 1891, 19,073; 1901, 20,919.

WINCHESTER SCHOOL, the oldest of our great schools, "Seinte Marie College of Wynchestre," the charter of which is dated Oct. 1382, was founded in 1387 by William (Lyng) of Wykeham, bishop of Winchester, who had established a

school here in 1373. The ancient statutes were revised in 1855; and still further altered by the Public Schools act of 1868. In Nov.-Dec. 1878 there was much published correspondence respecting the *fagging*—the excessive punishment of the boys by *boy prefects*. In May, 1892, it was arranged that the quincentenary of the school should be celebrated 25 July, 1893.

WINDMILLS are of great antiquity, and stated to be of Roman or Saracen invention. They are said to have been originally introduced into Europe by the knights of St John, who took the hint from what they had seen in the crusades. *Baker*. Windmills were first known in Spain, France, and Germany, in 1299. *Anderson*. Wind saw-mills were invented by a Dutchman, in 1633, when one was erected near the Strand, in London.

WINDOWS. There were glass windows in Pompeii, A.D 79, as is evident from its ruins. It is certain that windows of some kind were glazed so early as the 3rd century, if not before, though the fashion was not introduced until it was done by Benedict Biscop, about 674. Windows of glass were used in private houses, but the glass was imported 1177. *Anderson*. In England, in 1851, about 6000 houses had fifty windows and upwards in each; about 275,000 had ten windows and upwards; and 725,000 had seven windows, or less than seven.

WINDSOR (Berkshire). The *Castle*, a residence of the British sovereigns, begun by William the Conqueror, and enlarged by Henry I. about 1110. Edward III., who was born here, 13 Nov. 1312, caused the old building, with the exception of three towers at the west end, to be taken down, and re-erected the whole castle, under the direction of William of Wykeham, 1358, and built St. George's chapel. He assessed every county in England to send him workmen. James I. of Scotland was imprisoned here, 1406-23. Several additions were made by Henry VIII. Elizabeth made the grand north terrace; and Charles II. repaired and beautified it, 1676-80. Many foreign royal personages have been entertained at the castle. Windsor Forest, situated to the south and west of the town of Windsor, was formerly 120 miles in circumference: in 1607, it was 77½ miles round, but it has since been reduced in its bounds to about 56 miles. It was surveyed in 1789, and found to contain 59,600 acres.
Virginia Water and the plantations about it were taken out of the forest.
The marshes were drained and the trees planted for William, duke of Cumberland, about 1746; and much was done by George IV., who often resided at the lodge.
On the south side is Windsor Great Park; it contains about 3800 acres.
The Little Park, on the north and east sides of the castle, contains about 500 acres. The gardens are elegant, and have been considerably improved by the addition of the house and gardens of the duke of St. Albans, purchased by the crown.

WISSEMBOURG, or **WEISSENBURG**, N.E. France, in the department of the Lower Rhine, situate on the right bank of the river Lauter, the boundary of France and the Palatinate. It was formerly an imperial city of Alsace, and was seized by Louis XIV. in 1673, and annexed to France by the treaty of Ryswick, 1697. The "lines" of Wissembourg, erected by Villars 1705, were taken by the Austrians and retaken by the French, 1793, after Hoche's victory at Geisberg. On 4 Aug. 1870, the crown-prince of Prussia crossed the Lauter and gained a brilliant but bloody victory over the French (a part of MacMahon's division), storming the lines and the Geisberg. General Abel Douay was mortally wounded, and about 800 prisoners were made. The killed and wounded on both sides appear to have been nearly equal. The German army, composed of Prussians, Bavarians, and Würtembergers, were, it is said, about 40,000, against about 10,000 French, who fought with desperate bravery.

WITCHCRAFT. The Jewish law (*Exodus* xxii. 18), 1491 B.C., decreed, "Thou shalt not suffer a witch to live." Saul, after banishing or condemning witchcraft, consulted the witch of Endor, 1056 B.C. (1 *Sam.* xxviii.) Reginald Scots' "Discoverie of Witchcraft" (against its existence) published 1584. Reprinted, 1886. Bishop Hutchinson's historical "Essay on Witchcraft" was published in 1718. Pope Innocent VIII. issued a bull against witchcraft in 1484. Thousands of innocent persons were burnt, and others killed by the tests applied.

Two pretended witches were executed at Northampton in 1705, and five others seven years afterwards.
In 1716, Mrs. Hicks, and her daughter, aged nine, were hanged at Huntingdon.
Northamptonshire and Huntingdon preserved the superstition about witchcraft later than other counties.
In Scotland, thousands of persons were burnt in the period of about a hundred years. Among the victims were persons of the highest rank, while all orders in the state concurred. James I. even caused a whole assize to be prosecuted for an acquittal. The king published his *Demonologie* in Edinburgh, 1597. The last sufferer in Scotland was at Dornoch in 1722.
The laws against witchcraft had lain dormant for many years, when an ignorant person attempting to revive them (by finding a bill against a poor old woman in Surrey for the practice of witchcraft), they were *repealed*, 10 Geo. II. 1736.
Credulity in witchcraft still abounds in the country districts of England. On 4 Sept. 1863, a poor old paralysed Frenchman died in consequence of having been ducked as a wizard at Castle Hedingham, Essex, and similar cases have since occurred.

Lord Ellenborough ruled that no witness is obliged to answer questions which may tend to degrade himself, 10 Dec. 1802. New act relating to the examination of witnesses passed 13 Geo. III. 1773. Act to enable courts of law to order the examination of witnesses upon interrogations and otherwise, 1 Will IV. 30 March, 1831. WITU, or *Vitu*. See *Zanzibar*, 1890.

WIVES, see *Marriage*. By the Divorce and Matrimonial Causes Act, passed in 1857, the condition of married women has been much benefited. When ill-used they can obtain a divorce or judicial separation; and while in the latter state any property they may acquire is secured to them personally, as if unmarried. By another act passed in 1857, they are enabled to dispose of reversionary interests in personal property or estates. An act to amend the law relating to the property of married women was passed 9 Aug. 1870. By it the separate earnings of a wife were secured to her own use, as well as personal and freehold property bequeathed to her. She may maintain an action at law, and acquires other rights. The husband is declared not liable for debts contracted by his wife prior to marriage, and she may be sued for them. This act was amended in 1874. Husband and wife may be jointly sued for her debts before marriage. By the Matrimonial Causes Act, 1878, a magistrate can grant judicial separation, with maintenance, to a wife suffering from her husband's ill-usage.

(*Clitheroe case.*—Miss Emily Hall (born 1860) was married to Mr. E. Haughton Jackson at Blackburn, 5 Nov. 1887. They never lived together; she returned to her friends, and he soon after went to New Zealand. He returned to England, 17 July, 1891. After some correspondence and one interview (16 Jan. 1892) she steadily refused to live with him. Some litigation ensued, and a decree against her was obtained, 30 July, 1892. On 8 March, 1891, Mr. Jackson and others seized her when coming from church at Clitheroe, and carried her off to his house at Blackburn, where she was closely confined in charge of a nurse. By means of a writ of *habeas corpus*, she was brought before the court of appeal, who decided that a husband has no legal power to detain his wife against her will, 19 March. Mrs. Jackson then returned to her friends.

WOERTH SUR SAUER, a town in the department of the Lower Rhine, N.E. France. After storming Wissembourg (*which see*) on 4 Aug. 1870, the crown-prince of Prussia, with the 3rd army (about 150,000) marched rapidly forward and surprised part of the French army under Marshal MacMahon, including the corps of Canrobert and part of that of Failly (about 47,000), and defeated it in a long, desperate, and sanguinary engagement near this place 6 Aug. The battle lasted from 9 a.m. till 4 p.m. The chief struggles occurred in the country round Reichshoffen and in the village of Froeschweiller; the French are said to have charged the German line eleven times, each time breaking it, but always finding a fresh mass behind. The ridge on which Woerth stands was not captured until the French were taken in flank by the Bavarians and Würtembergers. Nearly all MacMahon's staff were killed, and the marshal himself, unhorsed, fell fainting into a ditch, from which he was rescued by a soldier. He then, on foot, directed the retreat towards Saverne, to cover the passes of the Vosges. The victory is attributed to the very great numerical superiority of the Germans as well as to their excellent strategy. The French loss has been estimated at 5000 killed and wounded, and 5000 prisoners, 2 eagles, 6 mitrailleuses, 35 cannon, and much baggage. The Germans are stated to have had above 8000 men put *hors de combat*. It was admitted that MacMahon had acted as an able and brave commander.

WOLVERHAMPTON (Staffordshire), an old town formerly named Hamton; owes its present name to the foundation of a college here by Wulfrana, sister of king Edgar, and widow of Aldhelm, duke of Northampton, 906. Queen Victoria was present at the inauguration of the prince consort's statue, 30 Nov. 1866. Wolverhampton is eminent for its manufactures in metal. Statue of hon. C. P. Villiers (its M.P., 1835-98) was uncovered, 6 June, 1879; he voted personally, when aged 90, for confidence in the Salisbury ministry, 11 Aug. 1892; died 16 Jan. 1898. Population, 1881, 75,766; 1891, 82,680; 1901, 94,179; 1904, 98,194.

WOLVES were once very numerous in England. Their heads were demanded as a tribute, particularly 300 yearly from Wales, by king Edgar, 961, by which step they were falsely said to be totally destroyed. *Carte.* Edward I. issued his mandate for the destruction of wolves in several counties of England, 1289. Ireland was infested by wolves for many centuries after their extirpation in England; for there are accounts of some being found there so late as 1710, when the last presentment for killing wolves was made in the county of Cork. Wolves still infest France, in which kingdom 8384 wolves and cubs were killed in 1828-9. They were troublesome in the Vosges, Oct. 1875; premiums introduced by the state for their destruction.

WOOD'S HALF-PENCE, for circulation in Ireland and America, were coined by virtue of a patent, passed 1722. Against them, Dr. Jonathan Swift, by his letters signed M. B. Drapier published about 1723, raised such a spirit of opposition that the patent was withdrawn. Wood received a compensation, but was virtually banished the kingdom. The half-pence were assayed in England by sir Isaac Newton, and proved to be genuine, in 1724.

WOOD PAVEMENT was laid down at Whitehall in 1839; and in Oxford-street, the Strand, and other streets. The principal part was soon taken up. In Nov. 1872, the improved wood pavement company put forth a prospectus; and in May, 1876, wood was laid down in many places. It is said to be the best pavement in London, and its use has diminished the noise of the traffic. Luther was met by 2000 persons on foot and on horseback, at the distance of a league from Worms. When Spalatin sent to warn him of his danger, he answered, "If there were as many devils in Worms as there are tiles upon the roofs of its houses, I would go on." He appeared before the emperor, the archduke Ferdinand, six electors, twenty-four dukes, seven margraves, thirty bishops and prelates, and many princes, counts, lords, and ambassadors, 17 April, acknowledged his writings and opinions, and left Worms, in fact, a conqueror. Yet, to save his life, he had to remain in seclusion under the protection of the elector of Saxony for about a year. The *edict* putting him under the ban of the empire was issued 26 May, 1521. WORSTED, spun wool, obtained its name from having been first spun at a town called Worsted, in Norfolk, in which the inventor lived, and where manufactures of worsted are still extensively carried on, 14 Edw. III. 1340. *Anderson.* "A worsted-stocking knave" is a term of reproach or contempt used by Shakspeare. Great increase of manufacture in W.R. Yorkshire, 1895 *et seq.*

WOUNDED IN BATTLE, see *Geneva Convention*, and *Aid to Sick and Wounded*.

WOUNDING. Malicious wounding of another was adjudged death by the English statutes. The Coventry Act was passed in *1671*; see *Coventry Act*. By lord Ellenborough's Act, persons who stab or cut with intent to murder, maim, or disfigure another were declared guilty of felony without benefit of clergy. Those guilty of maliciously shooting at another in any dwelling-house or other place, are also punishable under the same statute in the same degree, 43 Geo. III. 1802. This offence is met by some later statutes, particularly the act for consolidating and amending the acts relating to offences against the person, 9 Geo. IV., June, 1828. This last act is extended to Ireland by 10 Geo. IV., 1829. An act for the prevention of maliciously shooting, stabbing, &c., in Scotland, 6 Geo. IV., 1825; amended by 10 Geo. IV., 4 June, 1829, for the prevention and punishment of assaults on women and children.

WRECKS. The loss of merchant and other ships by wreck upon lee-shores, coasts, and disasters in the open sea, was estimated at Lloyd's, in 1800, to be about an average of 365 ships a year. In 1830, it appeared by *Lloyd's Lists* that 677 British vessels were totally lost, under various circumstances, in that year. The laws respecting wrecks were consolidated in 1846 and 1854. See *Seamen* (commission of inquiry).

Abstracts of the returns made to the Board of Trade of shipping casualties on or near the coast, &c., of the United Kingdom, and also of the casualties to British vessels elsewhere, and also to foreign vessels, published annually since 1855.

British vessels wrecked in 1848, were, sailing vessels, 501, steamers, 13, tonnage, 96,920

In 1851, there were wrecked 611 vessels, of which number 11 were steamers, the tonnage of the whole being 111,976

The year 1852-3, particularly the winter months (Dec and Jan), was very remarkable for the number of dreadful shipwrecks and fires at sea: but a few of them are recorded. Wrecks in 25 years (1854-79), 49,322, lives lost, 18,319.

After much discussion, and occasional reprisals, the king of the Netherlands ceded to Great Britain (for *Lloyd's*) half the remainder of the wreck. A British salvage company began operations in Aug. 1857. At the end of 1859, Lloyd's had received 22,160*l.* 6*s.* 3*d.* (about 93 per cent. recovered; about 2,175 *cwt.* remaining. WRECK COMMISSION, a court established to inquire into the causes of shipwrecks, first sat, 30 Oct. 1876, Mr. H. C. Rothery, president.

WRESTLING. The art of wrestling dates back many centuries. Its popularity has waxed and waned with varying periods. Towards the end of the 19th century wrestling as a pastime again came into prominence in England by the introduction of Russian, Turkish, and other foreign wrestlers. The principal forms of modern wrestling are the Greco-Roman, the Catch-as-catch-can, and Jiu-jitsu, the latter being the national style in Japan. In Greco-Roman wrestling the opponents are not allowed to hold each other below the waist, and both hips and shoulders of one contestant must be forced to the ground before a fall can be gained. In the Catch-as-catch-can style any hold is allowed, and the placing of both hips and one shoulder of a rival to the mat constitutes a fall. Jiu-jitsu, or the Japanese art of self-defence, has methods peculiar to its own, mainly consisting of locks and holds, a knowledge of which enables a comparatively weak person to defeat and overcome another of greater strength. The city of London police, as well as other forces, have been taught Jiu-jitsu.

WRITING. Pictures are considered to be the first essay towards writing. The Egyptian papyri are very ancient, see *Dead, Book of the*. The most ancient remains of writing are upon hard substances, such as stones and metals, used by the ancients for edicts, and matters of public notoriety. Cadmus, the founder of Cadmea, 1493 B.C., is mythically said to have brought the Phœnician letters into Greece. *Vossius*. The commandments were written on two tables of stone, 1491 B.C. *Usher*. The Greeks and Romans used wax tablet-books, and continued the use of them long after papyrus was known; see *Papyrus, Parchment, Paper*. Thos. Astle's "History of Writing" was first published in 1784; Natalis de Wailly's "Eléments de Paléographie," 1838; E. M. Thompson's "Handbook of Greek and Latin Palæography"; see *Hieroglyphics, Cuneiform inscriptions, Bible, Diplomatics, Palæography* and *Type Writers*.*

WROXETER (in Shropshire), the Roman city *Uriconium*. Roman inscriptions, ruins, seals, and coins were found here in 1752. New discoveries having been made, a committee for further investigation met at Shrewsbury on 11 Nov. 1858. Excavations were commenced in Feb. 1859, which were continued till May. Large portions of the old town were discovered; also specimens of glass and pottery, personal ornaments and toys, household utensils and implements of trade, cinerary urns, and bones of man and of the smaller animals. A committee was formed in London in Aug. 1859, with the view of continuing these investigations, which were resumed in 1861, through the liberality of the late Hersah Botfield, M.P. The investigations, stopped through want of funds, were resumed for a short time in 1867. Mr. Thomas Wright published "Uriconium" in 1872.

This multitude was stopped at Thermopylæ (*which* see) by the valour of 300 Spartans under Leonidas, 7–9 Aug. 480 B.C. YANKEE, from "Yengees," a corruption of "English," the name originally given by the Massachusetts Indians to the colonists: applied solely to the New Englanders by the British soldiers in the American war (1775-81); afterwards by foreigners to all natives of the United States; and by the confederates of the south to the federals of the north during the war 1861-64.

YARD. The word is derived from the Saxon *geard*, or *gyrd*, a rod or shoot, or from *gyrdan* to enclose, being anciently the circumference of the body, until Henry I. decreed that it should be the length of his arm; see *Standard Measures*.

YARKAND, the chief town and commercial capital of Eastern Turkestan, situated on the river Yarkand, an affluent of the river Tarim, which enters Lob Nor, in the midst of a fertile oasis, 100 miles S.E. of Kashgar. The town is surrounded by a strong mud wall, inside which are numerous rich and well-watered gardens. The inhabitants are chiefly Persians, who are enterprising merchants. Near to Yarkand are mountains abounding in minerals. Yarkand was visited by Marco Polo, but comparatively little was known of it until Mr. R. Shaw, who resided there for a time, published in 1871 an account of the town and its people. Population about 60,000.

YARMOUTH, GREAT (Norfolk), was a royal demesne in the reign of William I., as appears from Domesday Book, 1086. It obtained a charter from John, and one from Henry III. In 1348, a plague here carried off 7000 persons; and did much havoc again in 1579 and 1664. The parish church of St. Nicholas, founded by bp. Herbert de Losinga, 1101, is one of the largest churches in Great Britain; restored 1847-84. A feature of Yarmouth is its narrow lanes or "rows," 145 in number, which intersect the main streets; a monument, 144 feet high, was erected here to Nelson in 1818. There are numerous public buildings and institutions, some of which are of considerable architectural merit. Yarmouth is the chief seat of the English herring fishery, and the curing of this fish, known as "Yarmouth bloaters," constitutes an important industry; a considerable trade is also carried on in connection with mackerel fishing. Associated with the town is Chas. Dickens' charming creation "Peggotty." Returns one M.P. by act of 1885. Population, 1881, 46,767; 1891, 49,318; 1901, 51,316.

YEAR. The Egyptians, it is said, were the first who fixed the length of the year.

The Roman year introduced by Romulus, 738 B.C.; corrected by Numa, 713 B.C.; and again by Julius Cæsar, 45 B.C. (*see Calendar*).
The *solar* or astronomical year was found to comprise 365 days, 5 hours, 48 minutes, 51 seconds, and 6 decimals, 365 B.C.
The *lunar* year (twelve lunar months, or 354 days, 8 hours, 48 minutes) was in use amongst the Chaldæans, Persians, and Jews. Once in every three years was added another lunar month, so as to make the solar and the lunar year nearly agree. But though the months were lunar, the year was solar: that is, the first month was of thirty days, and the second of twenty-nine, and so alternately: and the month added triennially was called Ve-Adar or the second Adar. The Jews afterwards followed the Roman manner of computation.
The *sidereal* year, or return to the same star, is 365 days, 6 hours, 9 minutes, 11 seconds.
The Jews dated the beginning of the sacred year in March, and civil year in September: the Athenians began the year in June; the Macedonians on 24 Sept.: the Christians of Egypt and Ethiopia on 29 of 30 Aug.: and the Persians and Armenians on 11 Aug. Nearly all Christian nations now commence the year on 1 January.

In France, the Merovingian kings began the year with March; the Carlovingians sometimes began the year with Christmas, 25 Dec.; and sometimes with Easter, which, being a movable feast, led to much confusion. Charles IX. of France, in 1564, published an arret, the last article of which ordered the year for the time to come to be constantly and universally begun, and written on and from 1 January.

The beginning of the year has been reckoned from the day celebrating the birth of Christ, 25 Dec.; his circumcision, 1 Jan.; his conception, 25 March; and his resurrection, Easter.

The English began their year on the 25th of December, until the time of William the Conqueror. This prince having been crowned on 1 Jan. gave occasion to the English to begin their year at that time, to make it agree with the then most remarkable period of their history. *Style.* Until the act for altering the style, in 1752 (*see Style*), when the year was ordered to begin on Jan. 1, it did not legally and generally commence in England until 25th March. In Scotland, at that period, the year began on the 1st of January. This difference caused great practical inconveniences, and January, February, and part of March sometimes bore two dates, as we often find in old records, 1745-1746, or 1745-6, or 1745. Such a reckoning often led to chronological mistakes, for instance, we popularly say the "revolution of 1688," as that event was completed in February, 1688, according to the then mode of computation, but if the year were held to begin, as it does now, on the first of January, it would be the revolution of 1689.

The year in the northern regions of Siberia and Lapland is described in the following calendar, given by a traveller:—"23 *June*, snow melts. 1 *July*, snow gone. 9 *July*, fields quite green. 17 *July*, plants at full growth. 23 *July*, plants in flower. 2 *Aug.*, fruits ripe. 10 *Aug.*, plants shed their seed. 18 *Aug.* snow." The snow continues upon the ground from 18th Aug. of one year to 23rd June of the year following, being 309 days out of 365, so that while the three seasons of spring, summer, and autumn are together only fifty-six days, or eight weeks, the winter is of forty-four weeks' duration in these countries.

YEAR OF OUR LORD; see *Anno Domini.*

YEAR OF THE REIGN. From the time of William the Conqueror, 1066, the year of the sovereign's reign has been given to all public instruments. The king's patents, charters, proclamations, and all acts of parliament have since then been generally so dated. The same manner of dating is used in most of the European states for all similar documents and records; see List of Kings under *England.*

YEAR AND A DAY. A space of time in law, and in many cases establishes and fixes a right; as in an estray, on proclamation being made, if the owner does not claim it within the time, it is forfeited. The term arose in the Norman law, which enacted that a beast found on another's land, if unclaimed for a year and a day, belonged to the lord of the soil. It is otherwise a legal space of time.

YEAR-BOOKS contain reports in Norman-French of cases argued and decided in the courts of common law. The printed volumes extend from the beginning of the reign of Edward II. to nearly the end of the reign of Henry VIII., a period of about 220 years; but in this series there are many omissions. These books are the first in the long line of legal reports in which England is so rich, and may be considered as, to a great extent, the foundation of our unwritten law, "*Lex non scripta.*" In 1863 *et seq.* various year-books of Edward I. (1292-1304) edited by Mr. A. J. Horwood, for the series of the Chronicles and Memorials, were published at the expense of the British government. Year-books 16 Edward III., published, 1897; the 17th year, 1342-3, published 1902. "Year-Book of Science," published 1892 *et seq.* "The Englishwoman's Year-book," published 1881 *et seq.*

YEAST, a substance causing fermentation, was discovered by Cagniard de la Tour and Schwann, independently, in 1836, to be a vegetable cell or fungus.

YELLOW FEVER, an American pestilence, made its appearance at Philadelphia, where it committed great ravages, 1699. It appeared in several islands of the West Indies in 1732, 1739, and 1745. It raged with unparalleled violence at Philadelphia in Oct. 1762; and most awfully at New York in the beginning of Aug. 1791. This fever again spread great devastation at Philadelphia in July 1793; carrying off several thousand persons. *Hardie.* It again appeared in Oct. 1797; and spread its ravages over the northern coast of America, Sept. 1798. It reappeared at Philadelphia in the summer of 1802; and broke out in Spain, in Sept. 1803. The yellow fever was very violent at Gibraltar in 1804 and 1814; in the Mauritius, July 1815; at Antigua, in Sept. 1816; and it raged with dreadful consequences at Cadiz, and the isle of St. Leon, in Sept. 1819. A malignant fever raged at Gibraltar in Sept. 1828, and did not terminate until the following year. Yellow fever raging in the southern of the United States Sept. Oct. 1878; at Memphis, autumn, 1879; in Florida (specially in Jacksonville) and other southern states, autumn 1888. Mr. R. A. Proctor, the astronomer, died of it at New York on his way from Florida to England, 12 Sept. 1888; the epidemic abating Oct. 1888: 4,583 cases, and 306 deaths in Jacksonville to Nov. 17, 1888, slight outbreak, with some deaths, July-Sept. 1899, and at Senegal, autumn, 1900; Messrs. Reed, Carroll, and Agromonte investigate into the cause of the fever in Cuba during 1900, and finally prove the disease to be conveyed by a species of mosquito (*Culex fasciatus*), reported Feb. 1901. Dr. W. Myers, one of the commission, died of the fever, 22 Jan. 1901; maj. Reed died mid Dec. 1902. Slight outbreaks in 1905.

YELLOWSTONE NATIONAL PARK, about 3300 square miles, in territory of Wyoming.

It includes Yellowstone lake, about 150 square miles, with numerous geysers, volcanic and other grand natural phenomena, rugged mountains, forests, meadows, rivers, and much beautiful scenery. Its formation was authorised by congress in March, 1872.

YEOMEN OF THE GUARD, a peculiar body of foot guards to the king's person, instituted at the coronation of Henry VII. 30 Oct. 1485, which originally consisted of fifty men under a captain. They were called beef-eaters, a corruption of *buffetiers*, being attendants on the king's buffet or sideboard; see *Battle-Axe.* They were of a larger stature than other guards, being required to be over six feet in height, and were armed with arquebuses and other arms. The band was increased by Henry's successors to one hundred men, and seventy supernumeraries; and when one of the hundred died, it was ordered that his place should be supplied out of the seventy. They were clad after the manner of king Henry VIII. *Ashmole's Instit.* This is said to have been the first permanent military band instituted in England. John earl of Oxford, was the first captain in 14[illegible]. *Beatson's Pol. Index.*

YEOVIL, a municipal borough in Somerset, situated on the river Yeo, 22 miles S.E. of Bridgewater and 40 miles S. of Bristol. The parish church, St. John's, called the "Lantern of the West," is a fine cruciform structure of the perpendicular style, dating from the 15th century, restored 1864. The town was formerly noted for its woollen industry; at the present time (1903) it carries on an extensive trade in gloves manufactured here. In 1449 a great fire destroyed 117 houses. Population, 1891, 9,648; 1901, 9,861.

YERMUK (Syria). Near here the emperor Heraclius was totally defeated by the Saracens, after a fierce engagement, Nov. 636. Damascus was taken, and his army expelled from Syria.

YEW-TREE (*Taxus*). The origin of planting yew-trees in churchyards was (these latter being fenced) to secure the trees from cattle, and in this manner preserve them for the encouragement of archery. A general plantation of them for the use of archers was ordered by Richard III. 1483. *Stow's Chron.* Near Fountains Abbey, Yorkshire, were seven yew-trees, called the Seven Sisters, supposed to have been planted before 1088; the circumference of the largest thirty-four feet seven inches round the trunk. In 1851 a yew-tree was said to be growing in the churchyard of Gresford, North Wales, whose circumference was nine yards nine inches, being the largest and oldest yew-tree in the British dominions; but tradition states that there are some yews in England older than the introduction of Christianity. The old yew-tree mentioned in the survey taken of Richmond palace in 1649, is said to be still existing.

YEZIDIS, an eastern tribe, living near the Euphrates, visited by Mr. Layard in 1841: see *Devil Worship*.

YEZDEGIRD, or PERSIAN ERA, was formerly universally adopted in Persia, and is still used by the Parsees in India, and by the Arabs, in certain computations. This era began on the 26th June, 632, when Yezdegird was elected king of Persia. The year consisted of 365 days only, and therefore its commencement, like that of the old Egyptian and Armenian year, anticipated the Julian year by one day in every four years. This difference amounted to nearly 112 days in the year 1075, when it was reformed by Jelaledin, who ordered that in future the Persian year should receive an additional day whenever it should appear necessary to postpone the commencement of the following year, that it might occur on the day of the sun's passing the same degree of the ecliptic.

YIDDISH, a kind of jargon Hebrew spoken by the lower class of Jews. There are two daily papers published in Yiddish in the east of London, the *Jewish Express* and the *Jewish Journal*, each one half-penny.

YNGLINGS (youths, or off-shoots), descendants of the Scandinavian hero Odin, ruled Sweden till 830, when the last of the pontiff kings, Olaf Trætelia, being expelled, led to the foundation of the Norwegian monarchy.

YOKE is spoken of as a type of servitude. The ceremony of making prisoners pass under it was practised by the Samnites towards the Romans, 321 B.C.; see *Caudine Forks*. This disgrace was afterwards inflicted by the Romans upon their vanquished enemies. *Dufresney*.

YOKOHAMA, see *Japan*.

YORK (N. England), a town of the Brigantes, named Evrauc, settled by the Romans during the second campaign of Agricola, about 79, and named *Eboracum* or *Eburacum*, and became the metropolis of the north. See *Population*.

YORK, ARCHBISHOPRIC OF. The most ancient metropolitan see in England, being, it is said, so made by king Lucius about 180, when Christianity was first partly established in England. The bishop Eborius was present at the council of Arles, 314. The see was overturned by the Saxons, and was revived by pope Gregory on their conversion, and Paulinus is said to have been consecrated archbishop, 21 July, 625. York and Durham were long the only two sees in the north of England, until Henry I. erected a bishopric at Carlisle, and Henry VIII. another at Chester. York was the metropolitan see of the Scottish bishops; but during the time of archbishop Nevil, 1464, they withdrew their obedience, and had archbishops of their own. Much dispute arose between the two English metropolitans about precedency, as by pope Gregory's institutions it was thought he meant, that whichever of them was first confirmed, should be superior: appeal was made to the court of Rome by both parties, and it was determined in favour of Canterbury. The archbishop of York was allowed to style himself primate of England, while the archbishop of Canterbury styles himself primate of *all* England. The province of York now contains the dioceses of York, Carlisle, Chester, Durham, Sodor and Man, Manchester, Liverpool, Newcastle, Wakefield and Ripon (*which see*). York has yielded to the church of Rome eight saints and three cardinals, and to England twelve lord chancellors, two lord treasurers, and two lord presidents of the north. It is rated in the king's books, 39 Henry VIII. 1546, at 1609*l.* 19*s.* 2*d.* per annum. *Beatson.* Present income 10,000*l.*

YORK MINSTER (dedicated to St. Peter). The first Christian church erected here, which appears to have been preceded by a Roman temple, was built by Edwin, king of Northumbria, of wood, about 625, and of stone about 635. It was damaged by fire in 741, and was rebuilt by archbishop Albert, about 780. It was again destroyed by fire in the year 1069, and rebuilt by archbishop Thomas, of Bayeux. It was once more burnt down in 1137, with St. Mary's abbey, and 39 parish churches in York. Archbishop Roger built the choir, 1154-81; Walter Gray added the south transept in 1227; John de Romayne, the treasurer of the cathedral, built the north transept in 1260. His son, archbishop Romanus, laid the foundation of the nave in 1291. In 1330, William de Melton built the two western towers, which were finished by John de Birmingham in 1342. Archbishop Thoresby, in 1361, began to rebuild the choir, in accordance with the magnificence of the nave, and he also rebuilt the lantern tower. The minster was set on fire by Jonathan Martin, a lunatic, and the roof of the choir and its internal fittings destroyed, 2 Feb. 1829, the damage, estimated at 60,000*l.*, was repaired in 1832 under sir Robert Smirke. An accidental fire broke out, and in one hour reduced the belfry to a shell, destroyed the roof of the nave, and much damaged the edifice, 20 May, 1840. This was restored by Sidney Smirke, at a cost of 23,000*l.*, 1841.

YORK TOWN (Virginia, United States). Lord Cornwallis had taken possession of York town in Aug. 1781; but after sustaining a disastrous

siege, he was obliged to surrender his army, consisting of about 7000 men, to the allied armies of France and America, under the command of general Washington and count Rochambeau, 19 Oct. 1781. This mischance was attributed to sir Henry Clinton, who had not given the garrison the necessary succour they expected; and it mainly led to the close of the war. The centenary was celebrated 16 Oct. 1881 *et seq.* On 19 Oct. the British flag was saluted generally. The town was strongly fortified by the confederates in the American civil war, but surrendered to M'Clellan, May, 1862.

ZINC. The ore of zinc, calamine or spelter, known to the Greeks, who used it in the manufacture of brass. It is said to have been known in China also, and is noticed by European writers as early as 1231; though the method of extracting it from the ore was unknown for nearly five hundred years after. The metal zinc is mentioned by Paracelsus (died 1541). A mine of zinc was discovered on lord Ribblesdale's estate, Craven, Yorkshire, in 1809. Zincography was introduced in London shortly after lithography became known in England, in 1817; see *Lithography*. Zinc is much used in voltaic batteries; and its application in manufactures has greatly increased of late years; see *Photozincography*.

ZIONISTS, the name given to the adherents of the rev. Dr. Dowie, previously a presbyterian minister in Australia, who, in 1894, founded the "Christian Catholic Church" at Chicago, where is the huge building, called the Zion tabernacle, from which his followers derive their name. Dr. Dowie, who claims to be the second Elijah foretold by the prophet Malachi (Mal. iii. 1), professes to reform the church on the model of the primitive apostolic times, and claims to possess the apostolic gift of healing. The Zionists give tithes of all their possessions, and abstain from eating pork: and in sickness depend solely for their cure on faith and prayer; connected with the Zionist settlement are lace and candy manufactures, which carry on an extensive business.

By the treaty of 8 July, 1867, between the North German confederation and the southern states (Bavaria, Würtemberg, Baden, and Hesse), various changes were made, and by other treaties signed in Oct. these states agreed to send delegates to a customs parliament to be held at Berlin. ZOOLOGY (from ζῶον, Greek for animal) is the division of biology which treats of animals; Aristotle (322-284 B.C.) the founder of the science. Systems of classification have been made by John

Ray (1628-1705), Charles Linné (1707-78), G. Buffon (1707-88), and George Cuvier (1769-1832).

Linnæus divided the animal kingdom into six classes.—*Mammalia*, which includes all animals that suckle their young; *Aves*, birds; *Amphibia*, or amphibious animals; *Pisces*, fishes; *Insecta*, insects; *Vermes*, worms; 1742.

Cuvier (died in Paris, 13 May, 1832), in his great work, *Règne Animal*, published in 1816, distributed the animals into four great divisions, the *Vertebrata* (backboned); the *Mollusca* (soft-bodied); the *Articulata* (jointed); and the *Radiata* (the organs disposed round a centre).

In 1830, professor Owen made known a system of arranging the class *Mammalia* according to the nature of their brains.
